Step 2  Install and Charge the Handset Batteries

TO INSTALL THE HANDSET BATTERIES
When the handset battery pack is fully charged, after 15-20 hours of charging, plug the telephone cord into the base unit and then into a telephone wall jack.

Your phone is set for tone dialing. If your local network requires pulse dialing, please see "Choosing the dialing mode" on page 18.

A  Remove the cover.

B Connect the battery pack connector with the correct polarity.

C Replace the cover.

D Plug the AC adapter cord into the base unit and charging cradle and then into a 120V AC outlet.

E Place the handset in the base and place the other handset in the charging cradle. It does not matter which handset is placed in the base and charging cradle.

Step 3  Connect to Phone Line
When the handset battery pack is fully charged, after 15-20 hours of charging, plug the telephone cord into the base unit and then into a telephone wall jack.

Your phone is set for tone dialing. If your local network requires pulse dialing, please see "Choosing the dialing mode" on page 18.

A  Press and hold the cid/menu key.

B Press the vol/ring/ or vol/ring/ key to move the pointer to an option.

C Press select/channel to change the option setting.

D Press end to exit, and return the handset to the base.

Options include:

- Auto Talk
- CIDCW
- Area Code
- Dial Tone/Pulse
- Language

Step 5  Setting Display Options

TO SET CALLER ID, LANGUAGE AND DIALING OPTIONS

A Press the vol/ring/ A or vol/ring/ V key to move the pointer to an option.

B Press select/channel to change the option setting.

C Press end to exit, and return the handset to the base.

Options include:

- Auto Talk
- CIDCW
- Area Code
- Dial Tone/Pulse
- Language

Note: Three Caller ID options are available: AutoTalk, Caller ID on Call Waiting (CIDCW), and Area Code.

Welcome

Congratulations on your purchase of the Uniden DXI3086-2 series. This cordless phone is designed and engineered to exacting standards for reliability, long life, and outstanding performance.

Note: Some illustrations in this manual may differ from the actual unit for explanation purposes. The color of your cordless telephone may vary.

Features

- Dual Handsets
- 2.4GHz Extended Range Technology
- 3 Line Backlit Display
- Caller ID and Call Waiting Caller ID (each handset)
- RocketDial (each handset)
- 20 Number Memory Dialing (each handset)
- 32 Digit Redial
- Flash and Pause
- English or French Display Option
- The Keypad Facing Forward Charging
- Tone/Pulse Dialing
- Page/Find handset
- 7 Hour Talk Time/
- 7 Day Standby Time
- Handset Earpiece and Ringer Volume Control
- Hearing Aid Compatible
- 20 Channel Autoscan
- Call Transfer

Setting up the Phone

Do the following steps:
A. Choose the best location  
B. Install the rechargeable battery packs into both handsets  
C. Connect the base unit and charging cradle

A. Choose the best location
Before choosing a location for your new phone, read the INSTALLATION CONSIDERATIONS included in the PRECAUTIONS AND IMPORTANT SAFETY INSTRUCTIONS brochure. Here are some important guidelines you should consider:

- Avoid excessive moisture, extremely low temperatures, dust, mechanical vibration, or shock
- Avoid heat sources, such as radiators, air ducts, and sunlight
- Avoid microwave ovens
- Avoid noise sources such as a window by a street with heavy traffic
- Avoid television sets and other electronic equipment
- Avoid personal computers
- Avoid other cordless telephones

Choose a central location

- The location should be close to both a phone jack and a continuous power outlet which is not switchable.
- Keep the base and each handset away from sources of electrical noise such as motors, microwave ovens, and fluorescent lighting.
- Be sure there is sufficient space to raise the base antenna to a vertical position.
- The base can be placed on a desk, tabletop, or mounted on a standard wall plate.

If your home has specially wired alarm equipment connected to the telephone line, be sure that installing the system does not disable your alarm equipment.

If you have questions about what will disable your alarm equipment, contact your telephone company or a qualified installer.
B. Install the rechargeable battery packs into both handsets

Both handsets are powered by rechargeable battery packs. The battery recharges automatically when the handset is placed in the base unit or charging cradle.

Charge the handset battery packs for at least 15-20 hours before using your new cordless telephone for the first time! To maximize the charge capacity of your battery pack, DO NOT plug the telephone cord into the base unit and wall jack until the battery is fully charged.

1) Press down on the handset battery case cover (use the finger indentation for a better grip) and slide the cover downward to remove.

2) Plug the battery pack connector (red & black wires) into the small, black jack inside the battery compartment. (The connector notches fit into the grooves of the jack only one-way.) Match the wire colors to the polarity label in the battery compartment, connect the battery and listen for a click to insure connection.

3) Make certain you have made a good connection by slightly pulling on the battery wires to insure that there is a secure connection. If the battery connector is not securely connected, the handset will not charge properly.

• Use only the Uniden (BT-905) rechargeable battery pack supplied with your cordless telephone.
• Replacement batteries are also available through the Uniden Parts Department at (800) 554-3988, Monday thru Friday from 8:00 a.m. to 5:00 p.m. or online at www.uniden.com
• Place the second handset in the charger with the keypad facing forward for 15-20 hours before use.
4) Place the battery case cover back on the handset by sliding it upwards until it clicks into place.

5) Place one handset in the base unit and one handset in the charging cradle for 15-20 hours without interruption. The base and charging cradle unit's LED light labeled (charge/in use or charge) illuminates once the handset is placed in the base or charging cradle. The LED light will illuminate regardless if the battery pack is connected or not.

DO NOT rely on the LED light as an indicator that the battery pack is connected and the handset is charging!

If the base or charging cradle (charge/in use or charge) LED light does not illuminate:
• Check to see if the AC adapter is plugged into each charging cradle and the electrical wall outlet properly. (Use only the supplied AC adapter. Do not use any other AC adapter.)
• Check to see if each handset is sitting correctly in each charging cradle and making good contact with each charging contacts.
**Battery use time (per charge)**
From fully charged (15-20 hours charge time)
- Seven hours continuous use during talk mode
- Seven days when the handset is in the standby mode

**Low battery alert**
When the battery pack is very low and needs to be charged, the phone is programmed to eliminate functions in order to save power. If the phone is not in use, “Low Battery” appears on the LCD and none of the keys will operate.
If the phone is in use, “Low Battery” flashes and the handset beeps. Complete your conversation as quickly as possible and return the handset to either charging cradle for charging.

The last number dialed in the redial memory, as well as, the names and the numbers stored in the memory locations are retained for up to 30 minutes while you replace the battery pack.

**Cleaning the charging contacts**
To maintain a good charge, it is important to clean the charging contacts on the handsets, base unit and charging cradle once a month. Use a dry cloth or pencil eraser to clean. If the contacts become very dirty, using water only, dampen a cloth to clean the charging contacts. Then make sure to go back over the charging contacts with a dry cloth before returning the handsets to the base unit or charging cradle to charge.

www.uniden.com
C. Connect the base unit and charging cradle

1) Connect each AC adapter to the **DC IN 9V** jack and to each standard 120V AC wall outlet.

2) Set the base and charging cradle on a desk or tabletop, and place one handset in the base unit and one in the charging cradle.

3) Make sure that the **charge** and **in use** LED illuminate. If the LED does not illuminate, check to see that the AC adapter is plugged in and that the handset makes good contact with the cradle’s charging contacts.

   **Note**
   * Place the AC adapter to a continuous power supply.
   * Place the base unit and charging cradle close to the AC outlets so that you can unplug the AC adapters easily.

After installing the battery packs in the handsets, charge your handsets at least 15-20 hours before plugging into the phone line.

4) Once the handset battery packs are fully charged, connect the telephone line cord to the **TEL LINE** jack and to a telephone outlet.

   **Tip**
   * If your telephone outlet isn’t modular, contact your telephone company for assistance.
Before Using, Register Second Handset to the Base Unit

When the dual handsets are removed from the packaging, the handset that is placed in the base unit first (to charge battery for 15-20 hours), will automatically be registered to the base unit. (It does not matter which handset you choose to place in the base unit first.)

You will also need to register the second handset by placing it in the base cradle. The second handset WILL NOT operate properly until the registration has been completed. Once the handset is registered, it is ready for use.

Follow these simple steps to register:

1) First, install the battery packs in both handsets. Place either handset in the base, then place the second handset in the charging cradle. Charge both handsets for 15-20 hours.

2) After fully charging both handsets, remove the handset in the charging cradle, and place it in the base. The charge/in use LED light on the base will begin to flash, indicating that the registration is taking place between the second handset and the base.

3) Wait for at least 5 seconds before removing the handset from the base.

Congratulations, the registration has been completed, and your dual handset cordless phone is ready for use!

www.uniden.com
When to Re-register Handsets

1) You’ll need to re-register the second handset (follow steps on page 13) each time the digital security code is changed. Refer to page 41 for details regarding the Digital Security Code.

2) When there is a power failure for more than one hour:
   If power failure occurs (e.g. due to electrical storm or if the unit is unplugged during a move), both handsets will need to be re-registered. To re-register, follow the same registration process on page 13.

Call Transfer Feature

Conveniently, your cordless phone allows you to transfer outside calls from handset to handset, simply by pressing the delete/transfer key. Not to worry, conversations will not be interrupted; only one handset at a time can talk with an outside caller. The second handset cannot go off hook to listen to conversations or make an outgoing call while the other handset is in use.

To transfer a call (to the second handset)

1) Press delete/transfer during a call. The call will automatically be placed on hold and the transfer tone sounds.
2) When the other handset receives the call, the transfer tone stops. To cancel the transfer, press delete/transfer or talk/flash on the handset.

To receive a transfer call (from the second handset)

Pick up the handset (when AutoTalk is set to On), or pick up the handset and press talk/flash to answer the transferred call.

Additionally, you can answer the transferred call by pressing any number key, * / # / # (when AutoTalk is set to On).
Mounting the Base Unit on a Wall

Standard wall plate mounting
This phone can be mounted on any standard wall plate.

1) Plug the AC adapter into the DC IN 9V jack.
2) Wrap the AC adapter cord inside the molded wiring channel as shown.
3) Plug the AC adapter into a standard 120V AC wall outlet.
4) Plug the telephone line cord into the TEL LINE jack. Wrap the cord inside the molded wiring channel as shown.
5) Plug the telephone line cord into the telephone outlet.
6) Raise the antenna to a vertical position.
7) Align the mounting slots on the base with the mounting posts on the wall. Then push in and down until the phone is firmly seated.

www.uniden.com
Direct wall mounting

If you don’t have a standard wall plate, you can mount your phone directly to the wall.

Before doing this, consider the following:
- Avoid electrical cables, pipes, or other items behind the mounting location that could cause a hazard when inserting screws into the wall.
- Try to mount your phone within 5 feet of a working phone jack to avoid excessive lengths.
- Make sure the wall material is capable of supporting the weight of the base and handset.
- Use #10 screws (minimum length of 1-3/8 inches) with anchoring devices suitable for the wall material where the base unit will be placed.

1) Insert two mounting screws into the wall, (with their appropriate anchoring device), 3-15/16 inches apart.
   Allow about 1/8 of an inch between the wall and screw heads for mounting the phone.

2) Refer to steps 1 through 7 on page 15 to mount the telephone.
Setting Menu Options

There are five setup options available. They are Caller ID options [AutoTalk, CIDCW (Caller ID on Call Waiting), Area Code], Dial Mode and Language.

AutoTalk allows you to answer the phone without pressing the talk/flash key. If the phone rings when AutoTalk is On, simply remove the handset from the base or charging cradle and the phone automatically answers the call. If the phone rings when AutoTalk is Off, you must press talk/flash to answer the call.

CIDCW and Dial Mode options can only be set by using Handset 1. If you try to set by using Handset 2, you will not see these options listed on the LCD screen. To confirm which handset is HS1, refer to the display indicating "HS1" or "HS2".

AutoTalk, Area Code and Language options can be set by using either Handset 1 or Handset 2.

**Caller ID options**

To change your AutoTalk and CIDCW:

1) Press and hold cid/menu. The following screen appears.

2) Use the vol/ring/Å or vol/ring/¥ key to move the pointer to the selection that you would like to change. Press select/channel to toggle between "On" and "Off" for each setting.

3) Press end and return the handset to the base unit to complete the setting. The handset returns to the standby mode.
To enter your Area Code

If you enter a 3-digit area code number in the Area Code option, your local area code does not appear in Caller ID messages. Do not program this option, if your calling area requires 10-digit dialing. When reviewing Caller ID messages, you will see only the local seven digit number. For calls received from outside your local area code, you will see a full 10-digit number.

1) When the phone is in the standby mode, press and hold cid/menu. The Caller ID setting screen appears.

2) Press the vol/ring/v key to move the pointer to “Area Code”.

3) Press select/channel.

4) Use the number keys (0 - 9), or delete/transfer to enter the 3-digit area code.

5) Press select/channel. A confirmation tone sounds and the displayed area code is entered.

6) Press end or return the handset to the base unit or charging cradle to complete the setting. The handset returns to the standby mode.

When the area code has already been stored in memory, the stored area code will be displayed. To change it, use the delete/transfer and number keys to enter the new area code. Then press select/channel. A confirmation tone sounds.

Choosing the dialing mode

Most phone systems use tone dialing which sends DTMF tones through the phone lines. However, some phone systems still use pulse dialing such as in rural areas. The default setting is tone dialing. Depending on your dialing system, set the mode as follows:

• If your calling area requires 10-digit dialing, do not program this option.

• Make sure your battery pack is fully charged before choosing the dialing mode.
1) When the phone is in the standby mode, press and hold cid/menu. The following screen appears.

2) Press the vol/ring/V key to move the pointer to “Dial”.

3) Press select/channel to toggle between “Tone” and “Pulse” for each setting.

4) Press end and return the handset to the base unit to complete the setting.

   The handset returns to the standby mode.

Setting the language
1) When the phone is in the standby mode, press and hold cid/menu. The following screen appears.

2) Press the vol/ring/V key to move the pointer to “Language”.

3) Press select/channel to toggle between “Eng” and “Fr,” for each setting.

4) Press end or return the handset to the base unit or charging cradle to complete the setting. The handset returns to the standby mode.

   • Dialing mode can only be changed from handset 1. To confirm which handset is HS1, look at the display indicating “HS1” or “HS2”.
   • If you are not sure of your dialing system, set for tone dialing. Make a trial call. If the call connects, leave the setting as is, otherwise set for pulse dialing.
   • If your phone system requires pulse dialing and you need to send the DTMF tones for certain situations during a call, you may “switch-over” to tone dialing. (Refer to “Tone Dialing Switch-over” on page 22.)
### Making and Receiving Calls

Adjusting the Handset Ringer and Earpiece Volume

**Handset ringer tone and volume**
Press the `vol/ring/` or `vol/ring/` key in standby mode to select one of five ringer tones and volume combinations.

**Earpiece volume**
Pressing the `vol/ring/` or `vol/ring/` key during a call will change the earpiece volume of the handset. This setting will remain in effect after the telephone call has ended.

**Temporarily Mute Ringer**
If one handset is off the base or charging cradle, simply press the `end` key to temporarily mute the incoming ring only for that handset. The ringer will sound with the next incoming call.

*note*
When you press the `vol/ring/` or `vol/ring/` key in Maximum mode or the `vol/ring/` key in Low mode, an error tone sounds.

If you select “Ringer Off”, “<Ringer Off>” appears on the display when you make or receive calls, or when charging the handset.
Redial

The **redial/pause** key redials the last number dialed. The redialed number can be up to 32 digits long.

Tone Dialing Switch-over

Some telephone companies use equipment that requires pulse dialing (sometimes referred to as rotary dialing). If you need to enter tone dialing digits, you can switch-over to tone dialing during the call. For example, entering your bank account number after you have called your bank.

Initially make your call with the pulse dialing mode. Once your call connects, press the */tone/* key. Enter the desired number. These digits will be sent as tone dialing. Once the call ends, the tone mode is canceled and pulse dialing mode resumes.

Traveling Out-of-Range

During a call, as you begin to move your handset too far from your base unit, noise increases. If you pass the range limits of the base unit, your call will terminate within 1 minute.
Selecting a Different Channel

If you encounter interference while using your phone, you can manually change the phone’s channel for clear operation. This function works only when the phone is in use. Press select/channel. “Scanning” appears on the display, indicating the phone is changing to another channel. For more information on interference, refer to page 47.

Find Handsets

To locate the handsets, press find handset on the base. Both handsets beep for 60 seconds. Paging of both handsets is canceled when pressing any key on either handset or pressing find handset again.

Flash and Call Waiting

If you have “Call Waiting” service and a call waiting tone sounds while you are on a call, press talk/flash to accept the waiting call. There is a short pause, then you will hear the new caller. To return to the original caller, press talk/flash again.

You must subscribe through your local telephone company to receive Call Waiting Service.
Voice Mail Waiting Indicator

If you subscribe to voice mail service, you can use your cordless telephone to access your voice mailbox. The charge/in use light on the base of your phone flashes whenever you have messages waiting in your voice mailbox. Just program the RocketDial key with your access number and you can get your messages at the touch of a button. (The voice mail service provider will supply you with the access number. This number may be simply a phone number. Refer to the provider’s literature.)

You may need to occasionally reset the indicator if it remains On after you have retrieved your messages. To reset the indicator, press and hold find handset for 5 seconds.

note
You must subscribe to voice mail service from your telephone company in order to use this feature. The voice mail company will provide you with the access number.
Storing Phone Numbers and Names

Memory Dialing allows you to dial a number using just a few key presses. Your cordless telephone stores up to 20 names/numbers in each handset.

1) Press `mem`, "Select Memory" is displayed.

2) Press the `vol/ring/\` or `vol/ring/\` key, or enter a number (01 - 20) to select the memory location where you would like to store the number.

3) Press `mem` or `select/channel`.

4) Press `mem` or `select/channel`. The following screen appears and a cursor flashes indicating that the display is ready for the name to be entered.

If this screen appears, the selected memory location is already stored. Then you must either edit the entry in this location, delete the entry in this location, or select "Go Back" to choose another location.

5) To enter a name (up to 13 characters), use the number keys.
   - See the "Steps for entering names and special characters". (See page 27.)
   - Use the `#/tone/` key to move the cursor to the desired location.
   - Use `delete/transfer` to delete characters as needed.
   - Press and hold `delete/transfer` to delete all the characters.
   - If a name is not required, go to step 6.

---

**note**

- In memory dialing operation, you must press a key within 30 seconds or the phone will return to the standby mode. If you return the handset to the base, the phone will return to the standby mode also.

- You have 30 seconds after pressing `mem` to enter the number you wish to store. Otherwise, an error tone will sound.
6) Press select/channel or mem. “Store Number” is displayed. The cursor flashes indicating that the display is ready for the number to be entered.

7) Use the number keys to enter the phone number. The phone number cannot exceed 20 digits. Use redial/pause to enter a pause in the dialing sequence. The display shows a “P”. Each pause counts as one digit and represents a two second delay of time between the digits. Use delete/transfer to delete digits as needed.

8) Press select/channel or mem. You will hear a confirmation tone, and the following screen appears. Memory storage is complete. For example, if you store a name and number into memory location number 01, the display shows “Memory01 Stored”. After about 2 seconds, the following screen is displayed. Repeat steps 2 - 8 to store more numbers.

9) Press end to return to the standby mode.
Steps for Entering Names and Special Characters

Refer to the letters on the number keys to select the desired characters. With each press of a numeric key, the displayed character appears in the following order:
Upper case letters first, lower case letters next and finally the number corresponding to the key.

If you make a mistake while entering a name
Use the */tone/ < or */tone/ > key to move the cursor to the incorrect character.
Press delete/transfer to erase the wrong character, then enter the correct character.
To delete all characters, press and hold delete/transfer.

For example, to enter Movies.
1) Pick up the handset. Press mem.
2) Enter a number or press the vol/ring/ or vol/ring/ key to select a memory location.
3) Press mem or select/channel.
4) Press mem or select/channel. (When there is information already stored in the selected memory location, “Edit MemoryXX” is displayed. See page 30 for information on “Editing a Stored Name and/or Phone Number”)
5) Press 6 then press */tone/ > to move the cursor to the right.
6) Press 6 six times.
7) Press 8 six times.
8) Press 4 six times.
9) Press 3 five times.
10) Press 7 eight times.
11) When finished, press mem or select/channel.

To continue to store the telephone number, proceed to step 7 on page 26.

www.uniden.com
Making Calls with Memory Dialing

Memory dialing from Standby Mode
1) Press mem. The handset displays your programmed memory locations.
2) Press the vol/ring/↑ or vol/ring/↓ key, or enter the number (01 - 20) to select the memory location you would like to dial.
3) Press talk/flash. “Connecting” and the number you would like to dial appear on the display. Then the displayed number is dialed.
4) To exit the memory function without dialing, press end. The handset returns to the standby mode.

Memory dialing from Talk Mode
2) After the display changes from “Connecting” to “Talk”, press mem.
3) Press the vol/ring/↑ or vol/ring/↓ key, or enter a number (01 - 20) to select the memory location of the desired phone number.
4) The selected phone number in the memory will be dialed when select/channel is pressed.
5) To hang up, press end.

- If you press select/channel before talk/flash, you can confirm the name and the number stored in the selected memory location.
- Whenever you are using a memory menu screen, you must press a key within 30 seconds or the phone will return to the standby mode.

Chain Dialing

The memory locations on the handset are not limited to phone numbers. You can also store a group of numbers (up to 20 digits) that you need to enter once your call connects. This is referred to as Chain Dialing.

An example of this is a bank account number. Once you have called your bank, and are prompted to enter the account number, press `mem` and select the location number where the special number has been stored, then press `select/channel`.

Store your special number with an identifying name. (Refer to "Storing Phone Numbers and Names" on page 25.)
Editing a Stored Name and/or Phone Number

1) Press **mem**, “Select Memory” is displayed.

2) Press the **vol/ring/\^** or **vol/ring/\^** key, or enter a number (01 - 20) to select the memory location you would like to edit, and press **mem** or **select/ channel**.

3) Press **mem** or **select/ channel**.
   The following screen appears with the memory location number that you have selected in the display.

4) Press the **vol/ring/\^** or **vol/ring/\^** key to select “Edit MemoryXX”, then press **mem** or **select/ channel**. The following screen appears. The cursor flashes indicating that the display is ready for the name to be edited. When a name has not been stored, the cursor appears at the beginning of the second line.

5) Use the number keys, **#/tone/ < , # >**, or **delete/transfer** to edit the name. (See page 27.) To edit only the phone number, skip this step.

6) Press **mem** or **select/ channel**. The following screen appears. The cursor flashes indicating that the display is ready for the number to be edited.
7) Use the number key, redial/pause or delete/transfer to edit the phone number. The phone number cannot exceed 20 digits. (See page 26.) If you don’t want to change the phone number, skip this step.

8) Press mem or select/channel. If you changed either name or phone number, a confirmation display shows up. If it is correct, press the vol/ring/ key to move the pointer to “Yes” and press select/channel again. You hear a confirmation tone, and the following screen appears. The memory storage is complete. For example, if you store a name and number into memory location number 01, the display shows “Memory01 Stored”. After about 2 seconds, Select memory is displayed.

9) Press end to return to the standby mode.
Erasing a Stored Name and Phone Number

1) Press mem, “Select Memory” is displayed.
2) Press the vol/ring/ key or enter a number (01 - 20) to select the memory location you would like to erase.
3) Press mem or select/channel.
4) Press mem or select/channel. The following screen appears with the memory location number that you have selected in the display.
5) Press the vol/ring/ key to move the pointer down to “Delete MemoryXX”.
6) Press mem or select/channel. The following confirmation screen appears.
7) Press the vol/ring/ key to move the pointer to “Yes”.
8) Press select/channel or delete/transfer. You hear a confirmation tone, and the following screen appears.
9) After about 2 seconds, the display returns to the Select memory screen. You may delete the information in another memory location (return to step 2) or press end to return to the standby mode.
RocketDial

You can store your most frequently dialed number in the RocketDial location in each handset. The RocketDial allows you to dial a number with one key press. (There is no need to press talk/flash. The phone will automatically dial the number stored.)

Storing and Editing the RocketDial

1) When the phone is in the standby mode, press and hold RocketDial. Following display appears. If this screen appears, there is a number already stored. Press the vol/ring/ or vol/ring/ key to select “Edit Number”, then press select/channel.

2) Store the number by following step 7 under “Storing Phone Numbers and Names” on page 26.

3) Press select/channel. You hear a confirmation tone, and the following screen appears. Memory storage is complete.

Making Calls with the RocketDial

When the phone is in the standby mode, simply press RocketDial. The number stored in the RocketDial memory location is instantly dialed.

www.uniden.com
Deleting the RocketDial

1) When the phone is in the standby mode, press and hold RocketDial. Following display appears.

2) Press the vol/ring/ or vol/ring/ key to select “Delete Number”.

3) Press select/channel. Following display appears.

4) Press the vol/ring/ key to move the pointer to “Yes”.

5) Press select/channel or delete/transfer. You hear a confirmation tone, and the following display appears. After about 2 seconds, the handset returns to the standby mode.
Caller ID

You must subscribe to Caller ID service to use this feature.

When the telephone rings, the Caller ID feature allows you to view the caller’s name and phone number on the display before you answer the phone. The handset displays the phone number of the incoming call, the name, and time. Additionally, you can dial the displayed number and store the information for memory dialing. Make sure you have turned on the Caller ID/Call Waiting feature. (See page 17.)

When the Telephone Rings

1) When the Caller ID message is received, the display shows the caller’s phone number along with the date and time. The incoming call information is stored in the Caller ID record. If the Caller ID service includes the caller’s name, the caller’s name appears on the display (up to 15 letters).

The date and time received: 5/11 12:30PM
Caller’s name: Jane Smith
Caller’s phone number: 214-555-1234

You may receive any one of the following messages:

- When invalid data is received: “Incomplete Data”
- When a private name is received: “Private Name”
- When a private number is received: “Private Number”
- When an unknown name is received: “Unknown Name”
- When an unknown number is received: “Unknown Number”

www.uniden.com
Viewing the Caller ID Message List

The Caller ID list stores information for up to 30 incoming calls in each handset - even unanswered calls.

1) Press cid/menu.
   The summary screen appears. The screen shows the number of new messages and total messages.

2) Press the vol/ring/ V or vol/ring/ A key to display the latest or oldest Caller ID message.

3) Press the vol/ring/ V key to see the next message.
   Or press the vol/ring/ A key to see the previous message.

4) Press end to return to the standby mode.

Data errors appear as "".

In Caller ID operation, if no key is pressed for more than 30 seconds, an error tone sounds and the telephone returns to the standby mode.

If a call comes in via a telephone system that does not offer Caller ID service, no information is stored.

Each message can be up to 15 characters for the phone number and the name.

The number of calls from the same Caller ID appears next to the received time. Once you view the new message, the number will disappear.

2) When you pick up the phone, the display changes to “Connecting”.
   (AutoTalk feature is set to on.)

Note: Data errors appear as "".

• In Caller ID operation, if no key is pressed for more than 30 seconds, an error tone sounds and the telephone returns to the standby mode.
• If a call comes in via a telephone system that does not offer Caller ID service, no information is stored.
• Each message can be up to 15 characters for the phone number and the name.
• The number of calls from the same Caller ID appears next to the received time. Once you view the new message, the number will disappear.
Deleting Information from the Caller ID List

The cordless phone stores up to 30 messages in each handset. If the phone receives the 31st message, the oldest one in the list is automatically deleted. Caller ID data can also be deleted manually.

Deleting a Caller ID message
1) Press cid/menu. Display the message to be deleted from the Caller ID list by pressing the vol/ring/ \ or vol/ring/ \ key.

2) Press delete/ transfer.

3) Press the vol/ring/ \ or vol/ring/ \ key to select “Yes” or “No”.

4) Press select/channel or delete/transfer.
   
   When the pointer is at “Yes”: A tone sounds and the Caller ID message is deleted. The next Caller ID message is then displayed.
   When the pointer is at “No”: The display returns to the Caller ID message.

Deleting all Caller ID names/numbers
1) Press cid/menu.

2) Press delete/ transfer.

Note:
- While using the “Delete All?” or “Delete Message?” screen if no key is pressed for more than 30 seconds, an error tone sounds and the telephone returns to the standby mode.
- If you get an incoming call, a transferring call or page, the deleting operation is canceled and you can answer the call or page.

www.uniden.com
3) Press the vol/ring/\ or vol/ring/\ key to select "Yes" or "No".

4) Press select/channel or delete/transfer.

When the pointer is at "Yes":
A tone sounds and all stored Caller ID messages are deleted.

When the pointer is at "No":
The display returns to the summary screen.
Using the Caller ID List

Calling a party from the Caller ID list
You can place a call from the Caller ID list. The cordless phone stores up to 30 messages.

1) Press **cid/menu**. Select the phone number that you want to
dial by pressing the vol/ring/ ▲ or vol/ring/ ▼ key.

2) Press **talk/flash**. The displayed phone number
dials automatically.

You can place a call from Talk Mode. Press **talk/flash**, then press **cid/menu**. Select the
phone number that you want to dial by pressing the vol/ring/ ▲ or vol/ring/ ▼ key.
Press **select/channel**. The displayed phone number will be dialed.

Long Distance calls and Area Code Setting/Cancellation
Pressing 1 while the incoming Caller ID information is displayed (in step 1) will place
the prefix “1” in the display to set up for a long distance call. Pressing 3 will set or
cancel an area code setting.

• You cannot make a call from the Caller ID list if your cordless
telephone is connected
to a private branch
exchange (PBX).

• When a long distance
call has been set, “1”
appears in the display.

www.uniden.com
Storing Caller ID messages in Memory dialing

Messages shown in the Caller ID list can be stored in memory dialing. Using the incoming call information (i.e., Caller ID list), the phone number of the party on the Caller ID list can be stored in memory.

1) Press cid/menu.
   Select the phone number to be stored from the Caller ID list by pressing the vol/ring/ \( \wedge \) or vol/ring/ \( \vee \) key.

2) Press mem.

3) Press the vol/ring/ \( \wedge \) or vol/ring/ \( \vee \) key or enter a number (01 - 20) to select the memory location to be stored.

4) Press select/channel.
   You hear a confirmation tone, and the number is stored in memory. The display returns to the Caller ID list.

If a message has already been stored in the selected memory number location, a confirmation screen is displayed. Press the vol/ring/ \( \wedge \) key to select “Yes.” Press select/channel to overwrite. The display returns to the Caller ID list.

note
You cannot store a Caller ID message if a phone number does not appear in the message.
Changing the Digital Security Code

The digital security code is an identification code used to connect each handset and the base unit. Normally, setting the code is not necessary. The first time you charge each handset in the base, the security code is automatically set.

In the rare situation that you suspect another cordless telephone is using the same security code, you can change the code.

1) Remove the handset from the base unit. Press and hold find handset on the base.
2) While holding find handset, place the handset on the base unit, and leave the handset on the base for more than 3 seconds. A new random security code is set.

You can change the phone’s digital security code on either handset. However, you must re-register the other handset (not used to change the digital security code) back to the base unit. See registration on page 13.

Installing the Beltclip

To attach the beltclip
Insert the beltclip into the holes on each side of the handset. Press down until it clicks.

To remove the beltclip
Pull both sides of the beltclip to release the tabs from the holes.

Headset Installation

Your phone may be used with an optional headset, the Uniden HS910. To use this feature, insert the headset plug into the headset jack. Your phone is ready for hands-free conversations.

(Headset may be purchased by calling the Uniden Parts Department or visiting the web site, see QUICK REFERENCE GUIDE on page 3.)
Note on Power Sources

Battery replacement and handling
When the operating time becomes short, even after a battery is recharged, please replace the battery. With normal usage, your battery should last about one year. Please contact your place of purchase or the Uniden Parts Department for a replacement battery.

Warning: To avoid the risk of personal injury or property damage from fire or electrical shock, only use the Uniden battery model and Uniden adapter model specifically designated for this product.

Caution
• Use only the specified Uniden battery pack (BT-905).
• Do not remove the battery from each handset to charge it.
• Never throw the battery into a fire, disassemble it, or heat it.
• Do not remove or damage the battery casing.

Power Failure
During the period that the power is off, you will not be able to make or receive calls with the telephone.

Maintenance

When the handset, charging cradle, or base unit becomes slightly dirty
Wipe with a soft, dry cloth.

When the handset, charging cradle, or base unit becomes very dirty
Wipe with a soft cloth that has been dampened with diluted, neutral detergent. Dry with a dry cloth.

When the charging contacts become very dirty on the handset, charging cradle, and base unit
Using water only, dampen a cloth to clean the charging contacts. Then make sure to go back over the charging contacts with a dry cloth before returning the handset to the base unit or charging cradle to charge.

Caution
Do not use paint thinner, benzene, alcohol, or other chemical products. Doing so may discolor the surface of the telephone and damage the finish.
## Troubleshooting

If your phone is not performing to your expectations, please try these simple steps first.

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Suggestion</th>
</tr>
</thead>
<tbody>
<tr>
<td>The charge/in use LED or charge LED won't illuminate when the handset is placed in the base or charging cradle.</td>
<td>• Make sure the AC adapters are plugged into each charging cradle and wall outlet.</td>

</table>
**Liquid Damage**

Moisture and liquid can damage your cordless phone. In case of accidental submersion, please read the following steps.

<table>
<thead>
<tr>
<th>Case</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>If the handset or base is exposed to moisture or liquid, but only affects the exterior plastic housing.</td>
<td>Wipe off the liquid and use as normal.</td>
</tr>
</tbody>
</table>
| If moisture or liquid has entered the plastic housing (i.e. liquid can be heard in the phone or liquid has entered the handset battery compartment or vent openings on the base). | **Handset:**
1. Remove the battery cover and leave it off for ventilation.
2. Remove the battery pack by disconnecting.
3. Leave the battery cover off and the battery pack disconnected for at least 3 days.
4. Once completely dry, reconnect the battery pack and the battery cover.
5. Recharge the handset's battery pack for 20 hours in the base unit before using the phone.

**Base:**
1. Disconnect the AC adapter from the base unit, cutting off electrical power.
2. Disconnect the telephone cord from the base unit.
3. Let dry for at least 3 days.

**IMPORTANT:** You must unplug the telephone line while recharging the battery pack to avoid charge interruption.

**CAUTION:**

DO NOT use a microwave oven to speed up the drying process. This will cause permanent damage to the handset, base and the microwave oven.

After following these steps, if your cordless telephone does not work, please send to:

Uniden America Corporation
Parts and Service Division
4700 Amon Carter Blvd.
Ft. Worth TX 76155
1-800-554-3988, Monday through Friday
8 a.m. to 5 p.m. CST
General Information

The phone complies with FCC Parts 15 and 68.
Operating temperature: -10°C to 50°C (+14°F to +122°F)

AC Adapter Information
AC Adapter part number: AD-446
Input Voltage: 120V AC 60Hz
Output Voltage: 9V DC 210 mA

Battery Information
Battery part number: BT-905
Capacity: 600 mAH, 3.6V
Battery use time (per charge):
From fully charged
Talk mode duration: 7 hours
Standby mode duration: 7 days

- To avoid damage to the phone use only Uniden AD-446 and BT-905 with your phone.
- If each handset is left off of the base or charging cradle, the actual Talk mode duration will be reduced respective to the amount of time each handset is off the base or charging cradle.

Recharge your phone on a regular basis by returning the handset to the base or charging cradle after each phone call. When the operating time becomes short, even after the battery is recharged, please replace the battery. With normal usage, the battery should last about one year.

A replacement Uniden adapter and battery may be purchased at your local Uniden dealer or by contacting the Uniden Parts Department (800) 554-3988. Hours are from 8:00 a.m. to 5:00 p.m. Central Time, Monday through Friday. We can also be reached on the web at www.uniden.com.

Specifications, features, and availability of optional accessories are all subject to change without prior notice.
Important Safety Instructions

When using your telephone equipment, these basic safety precautions should always be followed to reduce the risk of fire, electrical shock, and injury to persons:

1. Read and understand all instructions.
2. Follow all warnings and instructions marked on the product.
3. Unplug this product from the wall outlet before cleaning. Use a dry cloth only. Do not use liquid or aerosol cleaners.
4. Exercise care in handling the battery in order not to short the metal contacts.
5. Charge the battery pack provided with or identified for use with this product. Use of another battery may present a risk of fire or explosion. The maximum range rating of this product is meant to be used as a means of comparison against other range claims.
6. Do not expose to fire, water, or excessive moisture.
7. Do not place or drop any objects on the product.
8. Do not overload wall outlets and extension cords, as this can result in a fire or electrical shock.
9. Do not disassemble this product. If service or repair work is required, take it to qualified service personnel. Opening or removing covers may expose you to dangerous voltages or other risks.

Additional Battery Safety Precautions

Caution: To reduce the risk of fire or injury to persons by the battery, read and follow these instructions:

1. Use only the Uniden battery pack specified in the owner’s manual.
2. Do not dispose of the battery pack in a fire. The cell may explode. Check the nickel-cadmium battery disposal package insert for disposal instructions.
3. Do not open or mutilate the battery pack. Released electrolyte is corrosive and may cause damage to the eyes or skin. It may be toxic if swallowed.
4. Exercise care in handling any primary or rechargeable battery. The battery may generate heat, ignite, or explode if it is short-circuited.
5. Charge the battery provided with or identified for use with this product. Use of another battery may present a risk of fire or explosion.
6. Precautions! Uniden voluntarily participates in an RBRC industry program to promote the recycling of Rechargeable Nickel-Cadmium Batteries in the United States. Call 1-800-8-BATTERY or visit www.RBRC.com for information on how to return used nickel-cadmium batteries.

Uniden reserves the right to make changes to its products at any time without the obligation to notify any person of such changes. Uniden works to reduce lead content in our PVC coated cords in our most electronic key telephone systems.
Telephone Line Problems
The FCC has granted the telephone company the right to disconnect service in the event that your phone causes problems on the telephone line. Also, the telephone company must give adequate notice in writing prior to such actions to allow you time for making necessary arrangements to continue uninterrupted service.
If you are having trouble with your telephone service, you must first disconnect your phone to determine if it is the cause of your problem. If you determine that it is the cause, you must leave it disconnected until the trouble has been corrected.

Radio Interference
Radio interference may occasionally cause buzzing and humming in your cordless handset, or clicking noises in the base. These noises are caused by electrical appliances such as a microwave oven, electric blanket, or radio. Moving the cordless telephone farther away from the source of the interference is often a simple solution. If you determine that it is the cause, you must leave it disconnected until the trouble has been corrected.

Radio Interference
Radio interference may occasionally cause buzzing and humming in your cordless handset, or clicking noises in the base. These noises are caused by electrical appliances such as a microwave oven, electric blanket, or radio. Moving the cordless telephone farther away from the source of the interference is often a simple solution. If you determine that it is the cause, you must leave it disconnected until the trouble has been corrected.

More Than One Cordless Telephone
If you want to use more than one cordless telephone in your home, they must operate on different channels. Press the channel key to select a channel that provides the clearest communication.

Cordless Telephone Privacy
Cordless telephones are radio devices. Communications between the handset and base of your cordless telephone are encrypted with a Secure Frequency Hopping Spread Spectrum (FHSS) technology. This technology transmits your telephone conversations as part of a shared radio spectrum, which is designed to be a common resource available to all users. In some circumstances, unauthorized persons may intercept communications using your cordless telephone. Consequently, any communications using your cordless telephone may not be private.

Installation Considerations
Selecting a Location
Before choosing a location for your new phone, there are some important guidelines you should consider:
- The location should be close to both a phone jack and continuous power outlet. (A continuous power outlet is an AC outlet which does not have a switch to interrupt its power.)
- Keep the base and handset away from sources of electrical noise such as motors or fluorescent lighting.
- Be sure there is sufficient space to fully extend the base antenna.
- The base can be placed on a desk or tabletop or mounted on a standard telephone wall plate.
- Most phone lines require 10-20 hours before completing the installation or using the handset.

Radio Interference
Radio interference may occasionally cause buzzing and humming in your cordless handset, or clicking noises in the base. These noises are caused by electrical appliances such as a microwave oven, electric blanket, or radio. Moving the cordless telephone farther away from the source of the interference is often a simple solution. If you determine that it is the cause, you must leave it disconnected until the trouble has been corrected.

Telephone Line Outlets
There are two types of phone outlets:
- Modular jack: Most phone equipment available now uses modular jacks. Phone cords are fitted with a molded plastic connector which plugs into this type of jack. If you do not have modular phone jacks, contact your local telephone company for information about their installation.
- Hardwired jack: Some equipment is wired directly to a phone jack, and these types of installations require a modular jack converter. This type of installation is not difficult; however, you should contact your local telephone dealer or a telephone supply store for advice about the proper adapter or converter for your particular situation.

More Than One Cordless Telephone
If you want to use more than one cordless telephone in your home, they must operate on different channels. Press the channel key to select a channel that provides the clearest communication.

Cordless Telephone Privacy
Cordless telephones are radio devices. Communications between the handset and base of your cordless telephone are encrypted with a Secure Frequency Hopping Spread Spectrum (FHSS) technology. This technology transmits your telephone conversations as part of a shared radio spectrum, which is designed to be a common resource available to all users. In some circumstances, unauthorized persons may intercept communications using your cordless telephone. Consequently, any communications using your cordless telephone may not be private.

Selecting a Location
Before choosing a location for your new phone, there are some important guidelines you should consider:
- The location should be close to both a phone jack and continuous power outlet. (A continuous power outlet is an AC outlet which does not have a switch to interrupt its power.)
- Keep the base and handset away from sources of electrical noise such as motors or fluorescent lighting.
- Be sure there is sufficient space to fully extend the base antenna.
- The base can be placed on a desk or tabletop or mounted on a standard telephone wall plate.
- Most phone lines require 10-20 hours before completing the installation or using the handset.

Telephone Line Outlets
There are two types of phone outlets:
- Modular jack: Most phone equipment available now uses modular jacks. Phone cords are fitted with a molded plastic connector which plugs into this type of jack. If you do not have modular phone jacks, contact your local telephone company for information about their installation.
- Hardwired jack: Some equipment is wired directly to a phone jack, and these types of installations require a modular jack converter. This type of installation is not difficult; however, you should contact your local telephone dealer or a telephone supply store for advice about the proper adapter or converter for your particular situation.

Connecting the Telephone Cords
Consider these safety guidelines when connecting the telephone cables:
- Never install telephone wiring during a lightning storm.
- Never touch uninsulated telephone wires or terminals unless the telephone line has been disconnected.
- Use caution when installing or modifying telephone lines.

Applying Power to the Base
This phone requires an AC outlet, without a switch to interrupt power, and the included AC adapter. To relieve strain on the DC plug when the phone is placed on a desk or tabletop, wrap the power cord around the base and then plug the base into the AC outlet.

NOTE: Never charge the cordless telephone unless it is disconnected from the telephone line.
I.C. Notice

TERMINAL EQUIPMENT
NOTICE: This equipment meets the applicable Industry Canada Terminal Equipment Technical Specifications. This is confirmed by the registration number. The abbreviation, IC, before the registration number signifies that registration was performed based on a Declaration of Conformity indicating that Industry Canada technical specifications were met. It does not imply that Industry Canada approved the equipment.

NOTICE: The Ringer Equivalence Number (REN) for this terminal equipment is marked on the equipment itself. The REN assigned to each terminal equipment provides an indication of the maximum number of terminals allowed to be connected to a telephone interface. The termination on an interface may consist of any combination of devices subject only to the requirement that the sum of the Ringer Equivalence Numbers of all the devices does not exceed five.

RADIO EQUIPMENT
The term "IC" before the radio certification number only signifies that Industry Canada technical specifications were met.

Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device. "Privacy of communications may not be ensured when using this telephone."
