Welcome

Congratulations on your purchase of the Uniden DXI386-2 series cordless telephone. This phone is designed and engineered to exacting standards for reliability, long life, and outstanding performance.

Note: Some illustrations in this manual may differ from the actual unit for explanation purpose. The color of your cordless phone may vary.

As an ENERGY STAR® Partner, Uniden has determined that this product or product models meets the ENERGY STAR® guidelines for energy efficiency. ENERGY STAR® is a U.S. registered mark.

Features

- Dual Handsets
- 900 MHz Extended Range Technology
- 3 Line Backlit Display
- Caller ID and Call Waiting Caller ID (each handset)
- RocketDial (each handset)
- 10 Number Memory Dialing (each handset)
- The Keypad Facing Forward Charging
- 32 Digit Redial
- Flash and Pause
- Tone/Pulse Dialing
- Page/Find handset
- 7 Hour Talk Time/10 Day Standby Time
- Handset Earpiece and Ringer Volume Control
- Hearing Aid Compatible
- 20 Channel Autoscan
- Call Transfer

The DXI386-2 series features include AutoTalk™ and AutoStandby™. AutoTalk allows you to answer a call by just removing the handset from the main base so you don’t have to waste time pushing buttons or flipping switches. AutoStandby allows you to hang up by simply returning the handset to the main base.

The UltraClear Plus™ true compander circuitry virtually eliminates background noise. This innovative technology, together with 20 different channels, provides you with the best possible reception during all your conversations.

To protect you against misbilled calls which might result from your phone being activated by other equipment, the DXI386-2 series has Random Code™ digital security which automatically selects one of over 260,000 digital security codes for the handset and base. Also, the AutoSecure™ feature electronically locks your phone when the handset is in the main base.

RocketDial™ is a one touch speed dial key that automatically dials your most important or frequently called number. The number dialed, is a preset number stored by the user. Call Transfer allows you to transfer outside calls from handset to handset, only one handset at a time can talk with an outside caller.

Be sure to visit our web site: www.uniden.com

Step 1 Charging the Batteries

TO INSTALL THE HANDSET BATTERIES

1. Remove the cover.
2. Connect the battery pack connector with the correct polarity.
3. Replace the cover.

TO PLUG INTO AC POWER

1. Plug AC adapter cord into the main base unit and extra charging cradle and then into a 120V AC outlet.
2. Place one handset in the main base and place the other handset in the extra charging cradle. It does not matter which handset is placed in the main base and extra charging cradle.

Step 2 Connecting

CONNECT TO A PHONE LINE

When the handset battery pack is fully charged, after 15-20 hours of charging, plug the telephone cord into the main base unit and then into a telephone wall jack.

Your phone is set for tone dialing. If your local network requires pulse dialing, please see “Choose the dialing mode” on page 17.

1. Remove the cover.
2. Connect the battery pack connector with the correct polarity.
3. Replace the cover.

Step 3 Before Using, Register Extra Handset to Base

After fully charging the handsets, remove the handset from the extra charging cradle and place it in the main base cradle. (Base LED light will begin to flash indicating registration is occurring.)

1. Wait for at least 5 seconds before removing the extra handset from the main base.

Congratulations, the registration has been completed, and your dual handset cordless phone is ready for use!

Note: You must charge the batteries continuously for 15 - 20 hours before using the phone.

Step 4 Setting Up the Caller ID

TO CHANGE CALLER ID OPTIONS

1. Press and hold cid/menu.
2. Press ▲ or ▼ to move the pointer to an option.
3. Press select/channel to change the option setting.
4. Press end and return the handset to the main base.

Note: Three Caller ID options are available: AutoTalk, Caller ID on Call Waiting (CIDCW), and Area Code.

Note: CIDCW can only be changed on HS1.
Controls and Functions

Dual Handsets

1. Handset antenna
2. Beltclip holes
3. Optional headset jack
4. Handset battery compartment
5. Handset earpiece
6. LCD display
7. Caller ID/menu key
8. Talk/flash key
9. */tone/left cursor ( ) key
10. Redial/pause (p) key
11. Select/channel key
12. Handset microphone and ringer speaker
13. Volume up ( ) key
14. RocketDial key
15. End key
16. Volume down ( ) key
17. #/right cursor ( ) key
18. Memory (mem) key
19. Delete/transfer key
20. Handset charging contacts
21. Status LED
22. Find handset key
23. Base charging contacts
24. Telephone line jack
25. DC IN 9V jack
26. Charging contacts
27. Charge LED
28. DC IN 9V jack
Read this First

This cordless telephone must be set up before use. Follow these steps:

**Step 1 (page 7)**
Unpack the telephone and accessories.

**Step 2 (page 8)**
Next, choose the best location to set up the main base unit.

**Step 3 (page 9 to 11)**
Then, insert the battery packs into the handsets. Connect the main base unit and extra charging cradle. You must charge the battery packs for **15-20 hours before plugging into the telephone line and using the phone.**

**Step 4 (page 12)**
After fully charging the handsets, remove the handset from the extra charging cradle and place it in the main base cradle for at least 5 seconds.

**Note**
Conveniently, your cordless phone allows you to transfer outside calls from handset to handset, simply by pressing the **transfer** key. Not to worry, conversations will not be interrupted; only one handset at a time can talk with an outside caller. The second handset cannot go off hook to listen to conversations or make an outgoing call while the other handset is in use.
Checking the Package Contents

Make sure you have received the following items in the package. If any of these items are missing or damaged, contact the Uniden Parts Department.

- Main base unit (1)
- Handset (2)
- AC adapter (2)
- Rechargeable battery (2)
- Telephone cord (1)
- Beltclip (2)
- Extra charging cradle (1)
- This owner’s manual
- Other printed materials

Uniden Parts Department at (800) 554-3988
Hours: M-F 7:00 a.m. to 5:00 p.m. CST. We can also be reached on the web at www.uniden.com
Setting up the Phone

Do the following steps:
A. Choose the best locations
B. Install the battery packs
C. Connect the main base unit and the extra charging cradle

A. Choose the best location

Before choosing a location for your new phone, read the INSTALLATION CONSIDERATIONS included in the PRECAUTIONS AND IMPORTANT SAFETY INSTRUCTIONS brochure. Here are some important guidelines you should consider:

- The location should be close to both a phone jack and a continuous power outlet which is not switchable.
- Keep the main base and handsets away from sources of electrical noise such as motors, microwave ovens, and fluorescent lighting.
- The main base can be placed on a desk, tabletop, or mounted on a standard wall plate.
B. Install the battery packs

Charge the battery packs for at least 15-20 hours before plugging the phone line into your phone.

1) Press in on the battery cover release and slide the cover down until it comes off.

2) Connect the battery pack connector observing correct polarity (black and red wires) to the jack inside the battery compartment.

   Do not exert any force on this connection. It could cause damage to the battery or to the handset. The plastic connectors will fit together in only one way. Once you are certain that you have made a good connection, then insert the battery pack into the battery compartment. Do not pinch the wires.

3) Securely close the battery compartment cover by sliding it up until it snaps into place.

4) Place one handset in the main base with the keypad facing forward. Place the other handset in the extra charging cradle.
Even when the battery pack is not being used, it will gradually discharge over a long period of time. For optimum performance, be sure to return the handset to the main base unit after a telephone call.

**Battery use time (per charge)**
From fully charged (15-20 hours charge time)
- Seven hours continuous use
- Ten days when the handset is in the standby mode

**Low Battery Alert**
When the battery pack is very low and needs to be charged, the phone is programmed to eliminate functions in order to save power. If the phone is not in use, "Low Battery" appears on the LCD and none of the keys will operate.

If the phone is in use, "Low Battery" flashes and the handset beeps. Complete your conversation as quickly as possible and return the handset to the main base unit for charging.

The last number dialed in the redial memory, the names and the numbers stored in the memory locations are retained for up to 30 minutes while you replace the battery pack.

**Cleaning the Battery Charging Contacts**
To maintain a good charge, it is important to clean the battery contacts on the handsets and main base unit as well as the extra charging cradle with a dry cloth or a pencil eraser about once a month. Do not use any liquids or solvents.
C. Connect the main base unit and the extra charging cradle

1) Connect the AC adapter to the DC IN 9V jack and to a standard 120V AC wall outlet.

2) Set the main base and extra charging cradle on a desk or tabletop, and place one handset in the main base unit and one in the extra charging cradle.

3) Make sure that the status LED illuminates. If the LED does not illuminate, check to see that the AC adapter is plugged in and that the handset makes good contact with the main base charging contacts.

- Use only the supplied AD-311 AC adapter. Do not use any other AC adapter.
- Connect the AC adapter to a continuous power supply.
- Place the main base unit close to the AC outlet so that you can unplug the AC adapter easily.

- After installing the battery packs in the handsets, charge your handsets at least 15-20 hours before plugging into the phone line. Once the handsets battery packs are fully charged, connect the telephone line cord to the main base and telephone wall outlet.

4) Connect the telephone line cord to the TEL LINE jack and to a telephone outlet once the handset is fully charged.

If your telephone outlet isn't modular, contact your telephone company for assistance.

Place the handset in the main base with the keypad facing forward for charging.

Place the power cord so that it does not create a trip hazard or where it could become chafed and create a fire or electrical hazard.
Before Using, Register Extra Handset to the Main Base Unit

When the dual handsets are removed from the packaging, the handset that is placed in the main base unit first (to charge battery for 15-20 hours), will automatically be registered to the main base unit. (It does not matter which handset you choose to place in the main base unit first).

You will also need to register the extra handset by placing it in the main base cradle. The extra handset WILL NOT operate properly until the registration has been completed. Once the handset is registered, it is ready for use.

Follow these simple steps to register:

1) First, install the battery packs in both handsets. Place either handset in the main base cradle, then place the extra handset in the extra charging cradle. Charge both handsets for 15-20 hours.

2) After fully charging both batteries, remove the handset in the extra charging cradle, and place it in the main base cradle. The LED light on the main base will begin to flash, indicating that the registration is taking place between the extra handset and the main base.

3) Wait for at least 5 seconds before removing the handset from the main base.

Congratulations, the registration has been completed, and your dual handset cordless phone is ready for use!
When to Re-register Handsets

1) You'll need to re-register the extra handset (follow steps on page 12) each time the digital security code is changed. Refer to page 40 for details regarding the Digital Security Code.

2) When there is a power failure for more than one hour
If power failure occurs (e.g. due to electrical storm or if the unit is unplugged during a move), both handsets will need to be re-registered. To re-register, follow the same registration process on page 12.

Call Transfer Feature

Conveniently, your cordless phone allows you to transfer outside calls from handset to handset, simply by pressing the transfer key. Not to worry, conversations will not be interrupted; only one handset at a time can talk with an outside caller. The second handset cannot go off hook to listen to conversations or make an outgoing call while the other handset is in use.

To transfer a call (to the second handset)

1) Press delete/transfer during a call. The call will automatically be placed on hold and the transfer tone sounds.

2) When the other handset receives the call, the transfer tone stops. To cancel the transfer, press delete/transfer or talk/flash on the handset.

To receive a transferred call (from the second handset)

Pick up the handset (when AutoTalk is set to On), or pick up the handset and press talk/flash to answer the transferred call. Additionally, you can answer the transferred call by pressing any number key, */tone/ <, or #/ (when AutoTalk is set to On).
Mounting the Main Base Unit on a Wall

**Standard wall plate mounting**

This phone can be mounted on any standard wall plate.

1) Plug the AC adapter into the **DC IN 9V** jack.

2) Wrap the AC adapter cord inside the molded wiring channel as shown.

3) Plug the AC adapter into a standard 120V AC wall outlet.

4) Plug the telephone line cord into the **TEL LINE** jack. Wrap the cord inside the molded wiring channel as shown.

5) Plug the telephone line cord into the telephone outlet.

6) Align the mounting slots on the main base with the mounting posts on the wall. Then push in and down until the phone is firmly seated.

DO NOT use an AC outlet controlled by a wall switch.
Direct wall mounting

If you don't have a standard wall plate, you can mount your phone directly to the wall. Before doing this, consider the following:

- Avoid electrical cables, pipes, or other items behind the mounting location that could cause a hazard when inserting screws into the wall.
- Try to mount your phone within 5 feet of a working phone jack to avoid excessive lengths.
- Make sure the wall material is capable of supporting the weight of the main base and handset.
- Use #10 screws (minimum length of 1-3/8 inches) with anchoring devices suitable for the wall material where the main base unit will be placed.

1) Insert two mounting screws into the wall, (with their appropriate anchoring device), 3-15/16 inches apart. Allow about 1/8 of an inch between the wall and screw heads for mounting the phone.

2) Refer to steps 1 through 6 on page 14 to mount the telephone.

Terminology

Throughout this manual, terms such as Standby and Talk Mode are used. Below is the terminology explanation.

- **Standby Mode** - The handset is not in use, off the main base or extra charging cradle, and talk/flash has not been pressed. A dial tone is not present.
- **Talk Mode** - The handset is off the main base or extra charging cradle and talk/flash has been pressed enabling a dial tone.
Setting Menu Options

There are four setup options available. They are Caller ID options [AutoTalk, CIDCW (Caller ID on Call Waiting), Area Code] and Dial Mode.

AutoTalk allows you to answer the phone without pressing the talk/flash button. If the phone rings when AutoTalk is on, simply remove the handset from the main base and the phone automatically answers the call. If the phone rings when AutoTalk is off, you must press talk/flash to answer the call.

**Caller ID options**

To change your AutoTalk and CIDCW:

1) Press and hold cid/menu. The following screen appears.

2) Use ▲ and ▼ or a number key (1 and 2) to move the pointer to the selection that you would like to change. Press select/channel to toggle between "On" and "Off" for AutoTalk and CIDCW.

3) Press end and return the handset to the main base unit. The handset returns to the standby mode.

To enter your Area Code

If you enter a 3-digit area code number in the Area Code option, your local area code does not appear in Caller ID messages. Do not program this option, if your calling area requires 10-digit dialing.

When reviewing Caller ID messages, you will see only the local seven digit number. For calls received from outside your local area code, you will see a full 10-digit number.

• AutoTalk and Area Code settings can be also changed from handset 2. The following screen appears.

• CIDCW On/Off setting can be changed from handset 1. To confirm which handset is HS1, look at the display indicating "HS1" or "HS2".

• If your calling area requires 10-digit dialing, do not program this option.
1) When the phone is in the standby mode, press and hold cid/menu. The Caller ID setting screen appears.

2) Press 3 or press ▼ twice to select "Area Code".

3) Press select/channel.

4) Use the number keys (0 to 9), #/ >, */*tone/ < or delete/transfer to enter the 3-digit area code.

5) Press select/channel. A confirmation tone sounds and the displayed area code is entered.

6) Press end or return the handset to the main base unit. The handset returns to the standby mode.

When the area code has already been stored in memory, the stored area code will be displayed. To change it, use the delete/transfer and number keys to enter the new area code. Then press select/channel. A confirmation tone sounds. To complete the setting, press end or return the handset to the main base unit.

Choosing the dialing mode

Most phone systems use tone dialing which sends DTMF tones through the phone lines. However, some phone systems still use pulse dialing such as in rural areas. The default setting is tone dialing. Depending on your dialing system, set the mode as follows:

</tbody>
</table>

Refer to page 16 “Setting Menu Options” to turn on the AutoTalk feature if desired.

Press `end`, or return the handset to the main base or extra charging cradle (AutoStandby).
Adjusting the Handset Ringer and Earpiece Volume

Handset ringer tone and volume
Press ▲ or ▼ in standby mode to select one of five ringer tones and volume combinations.

Earpiece volume
Pressing ▲ or ▼ during a call will change the earpiece volume of the handset. This setting will remain in effect after the telephone call has ended.

Ringer Mute
You can temporarily mute the ringer tone. When the handset is off the main base and the phone is ringing, press end to stop the incoming ring. The ringer tone will return to normal starting with the next incoming call.

Note: If you select “Ringer Off”, “<Ringer Off>” appears on the display when you make or receive calls, or charging the handset.
Redial

The redial/p key redials the last number dialed. The redialed number can be up to 32 digits long.

Tone Dialing Switch-over

Some telephone companies use equipment that requires pulse dialing (sometimes referred to as rotary dialing). If you need to enter tone dialing digits, you can switch-over to tone dialing during the call. For example, entering your bank account number after you have called your bank.

Initially make your call with the pulse dialing mode. Once your call connects, press */tone/. Enter the desired number. These digits will be sent as tone dialing. Once the call ends, the tone mode is canceled and pulse dialing mode resumes.

Traveling Out-of-Range

During a call, as you begin to move your handset too far from your base unit, noise increases. If you pass the range limits of the main base unit, your call will terminate within 5 minutes.
Flash and Call Waiting

If you have "Call Waiting" service and a call waiting tone sounds while you are on a call, press \textit{talk/flash} to accept the waiting call. There is a short pause, then you will hear the new caller. To return to the original caller, press \textit{talk/flash} again.

\textbf{Note:} You must subscribe through your local telephone company to receive Call Waiting Service.

Selecting a Different Channel

If you encounter interference while using your phone, you can manually change the phone’s channel for clear operation. This function works only when the phone is in use.

Press \textit{select/channel}. “Scanning” appears on the display, indicating the phone is changing to another channel. For more information on interference, refer to “Precautions” on page 45.

Page

To locate the handset (while it’s off the main base), press \textit{find handset} on the main base. Both handsets beep for 60 seconds.

Paging of both handsets is canceled when pressing any key on either handset.

\textbf{Hints:} You can cancel paging by pressing the find handset key on the main base.
Storing Phone Numbers and Names

Memory Dialing allows you to dial a number using just a few key presses. Your DXI386-2 series stores 10 names/numbers in each handset.

1) Press and hold **mem** until "Memory Store" is displayed.

2) Press **▲** or **▼**, or enter a number (0 - 9) to select the memory location where you would like to store the number.

3) Press **select/channel**. The following screen appears and a cursor flashes indicating that the display is ready for the name to be entered.

   If this screen appears, the selected memory location is already stored. Then you must either edit the entry in this location, delete the entry in this location, or select "Go Back" to choose another location.

4) To enter a name (up to 14 characters), use the number keys.
   - See the "Steps for entering names and special characters". (See pages 25-26)
   - Use **#/** and ***/tone/** to move the cursor to the desired location.
   - Use **delete/transfer** to delete characters as needed.
   - Press and hold **delete/transfer** to delete all the characters.
   - If a name is not required, go to step 5.
5) Press select/channel. "Store Number" is displayed. The cursor flashes indicating that the display is ready for the number to be entered.

6) Use the number keys to enter the phone number. The phone number cannot exceed 20 digits. Use redial/p to enter a pause in the dialing sequence. The display shows a "P". Each pause counts as one digit and represents a two second delay of time between the digits. Use delete/transfer to delete digits as needed.

7) Press select/channel. You will hear a confirmation tone, and the following screen appears. Memory storage is complete. For example, if you store a name and number into memory location number 7, the display shows "Memory 7 Stored". After about 2 seconds, "Memory Store" is displayed. Repeat steps 2 - 7 to store more numbers.

8) Press end to return to standby mode.
Steps for Entering Names and Special Characters

Refer to the letters on the number keys to select the desired characters. With each press of a numeric key, the displayed character appears in the following order: Upper case letters first, lower case letters next and finally the number corresponding to the key.

If you make a mistake while entering a name

Use */tone/* or */#/* to move the cursor to the incorrect character. Press delete/transfer to erase the wrong character, then enter the correct character. To delete all characters, press and hold delete/transfer.
For example, to enter **Uniden**:

1) Pick up the handset and press and hold *mem*.
2) Enter a number or press ↘, ↗ to select a memory location number.
3) Press *select/channel*.
4) Press 8 twice.
5) Press 6 five times.
6) Press 4 six times.
7) Press 3 four times, then press #/> to move the cursor to the right.

**note** If the next character uses the same number key, you must press #/> to move the cursor over. Otherwise the next time you press the number key, it changes the character that was previously set.

8) Press 3 five times.
9) Press 6 five times.
10) When finished, press *select/channel*.

To continue to store the telephone number, proceed to step 6 on page 24.
Making Calls with Memory Dialing

Memory dialing from Standby Mode

1) Press mem.
   The handset displays your programmed memory locations.

2) Press ∨ or ∧, or enter the number (0 - 9) to select the memory location you would like to dial.

3) Press talk/flash. "Connecting" and the number you would like to dial appear on the display. Then the displayed number is dialed.

Display a Programmed Number

Use #/> and */tone/< to toggle between the names display and the numbers display.

<table>
<thead>
<tr>
<th>Program name</th>
<th>Program number</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 UNIDEN CORP</td>
<td>800-297-1023</td>
</tr>
<tr>
<td>2 JOHN DOE</td>
<td>555-2530</td>
</tr>
<tr>
<td>3 MOM AND DAD</td>
<td>817-5551212</td>
</tr>
</tbody>
</table>

• If you press select/channel before talk/flash, you can confirm the name and the number stored in the selected memory location.

• To exit the memory function without dialing, press end. The handset returns to standby.

• Whenever you are using a memory menu screen, you must press a key within 30 seconds or the phone will return to standby.

When the stored phone number has 15 or more digits, "" is displayed next to the 13th digit. Press #/> to see the extra digits and */tone/< to return.
Memory dialing from Talk Mode

2) After the display changes from "Connecting" to "Talk", press mem.

3) Enter a number (0 - 9) to select the memory location of the desired phone number. The selected phone number is displayed. Then the number is dialed.

4) To hang up, press end.

Chain Dialing

The memory locations on the handset are not limited to phone numbers. You can also store a group of numbers (up to 20 digits) that you need to enter once your call connects. This is referred to as Chain Dialing.

An example of this is a bank account number. Once you have called your bank, and are prompted to enter the account number, simply press mem and the location number where the special number has been stored.

Store your special number with an identifying name. (Refer to "Storing Phone Numbers and Names" on page 23.)
Editing a Stored Name and/or Phone Number

1) Press and hold mem until "Memory Store" is displayed.

2) Press ▲ or ▼, or enter a number (0 - 9) to select the memory location you would like to edit.

3) Press select/channel.
   The following screen appears with the memory location number that you have selected in the display.

4) Press ▲ or ▼ to select "Edit Memory", then press select/channel. The following screen appears. The cursor flashes indicating that the display is ready for the name to be edited. When a name has not been stored, the cursor appears at the beginning of the second line.

5) Use the number keys, */tone/< . /> , or delete/transfer to edit the name. (See page 23.)
   To edit only the phone number, skip this step.

6) Press select/channel. The following screen appears.
   The cursor flashes indicating that the display is ready for the number to be edited.
7) Use the number key, redial/p or delete/transfer to edit the phone number. The phone number cannot exceed 20 digits. (See page 24.) If you don’t want to change the phone number, skip this step.

8) Press select/channel. You hear a confirmation tone, and the following screen appears. The memory storage is complete. For example, if you store a name and number into memory location number 1, the display shows “Memory 1 Stored”. After about 2 seconds, “Memory Store” is displayed.

9) Press end to return to standby mode.
Erasing a Stored Name and Phone Number

1) Press and hold mem until "Memory Store" is displayed.

2) Press ▲ or ▼, or enter a number (0 - 9) to select the memory location you would like to erase.

3) Press select/channel.
   The following screen appears with the memory location number that you have selected in the display.

4) Press ▼ to move the pointer down to "Delete Memory".

5) Press select/channel. The following confirmation screen appears.

6) Press ▲ to move the pointer to "Yes".

7) Press select/channel or delete/transfer.
   You hear a confirmation tone, and the following screen appears.

8) After about 2 seconds, the display returns to the "Memory Store" screen.
   You may delete the information in another memory location (return to step 2) or press end to return to standby mode.
RocketDial

You can store your most frequently dialed number in the RocketDial location in each handset. The RocketDial allows you to dial a number with one key press. (There is no need to press talk/flash. The phone will automatically dial the number stored.)

Storing and Editing the RocketDial

1) When the phone is in the standby mode, press and hold RocketDial. Following display appears. If this screen appears, there is a number already stored. Press ▲ or ▼ to select “Edit Number”, then press select/channel.

2) Store the number by following step 6 under "Storing Phone Numbers and Names" on page 24.

3) Press select/channel. You hear a confirmation tone, and the following screen appears. Memory storage is complete.

Making Calls with the RocketDial

When the phone is in the standby mode, simply press RocketDial. The number stored in the RocketDial memory location is instantly dialed.
Deleting the RocketDial

1) When the phone is in the standby mode, press and hold RocketDial. Following display appears.

2) Press ▲ or ▼ to select “Delete Number”.

3) Press select/channel. Following display appears.

4) Press ▲ to move the pointer to “Yes”.

5) Press select/channel or delete/transfer. You hear a confirmation tone, and the following display appears. After about 2 seconds, the handset returns to standby mode.
Caller ID

You must subscribe to Caller ID service to use this feature.
When the telephone rings, the Caller ID feature allows you to view the caller’s name and phone number on the display before you answer the phone. The handset displays the phone number of the incoming call, the name, and time. Additionally, you can dial the displayed number and store the information for memory dialing.
Make sure you have turned on the Caller ID/Call Waiting feature. (See page 16.)

When the Telephone Rings

1) When the Caller ID message is received, the display shows the caller’s phone number along with the date and time. The incoming call information is stored in the Caller ID record. If the Caller ID service includes the caller’s name, the caller’s name appears on the display (up to 15 letters).

Here are some typical displays;

- When the phone number and name data are received
- When invalid data is received

<table>
<thead>
<tr>
<th>Date</th>
<th>Time</th>
<th>Phone Number</th>
<th>Name</th>
</tr>
</thead>
<tbody>
<tr>

<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- If you answer a call before the Caller ID message is received (Example: before the second ring), the Caller ID message will not appear.
- When the call is received via a telephone company that does not offer Caller ID service, the caller’s phone number and name do not appear. (This includes international calls.)
- When the call is via a private branch exchange (PBX), the caller’s phone number and name may not appear.
2) When you pick up the phone, the display changes to "Connecting". (AutoTalk feature is set to on.)

Note: Data errors appear as "---".

Viewing the Caller ID Message List

The Caller ID list stores information for up to 30 incoming calls in each handset - even unanswered calls.

1) Press.cid/menu.
   The summary screen appears.
   The screen shows the number of new messages and total messages.

2) Press  v  to display the latest Caller ID message.

3) Press  v  to see the next message. Or press  ^  to see previous message.

4) Press end to return to standby mode.
Deleting Information from the Caller ID List
The DXI386-2 series stores up to 30 messages in each handset. If the phone receives the 31st message, the oldest one in the list is automatically deleted. Caller ID data can also be deleted manually.

Deleting a Caller ID message
1) Press **cid/menu**. Display the message to be deleted from the Caller ID list by pressing ▲ or ▼.

2) Press **delete/transfer**.

3) Press ▲ or ▼ to select “Yes” or “No”.

4) Press **select/channel** or **delete/transfer**.

*When the pointer is at “Yes”:*
A confirmation tone sounds and the Caller ID message is deleted. The next Caller ID message is then displayed.

*When the pointer is at “No”:*
The display returns to the Caller ID message.

Deleting all Caller ID names/numbers
1) Press **cid/menu**.

2) Press **delete/transfer**.

---

**Note**
- While using the “Delete All?” or “Delete Message?” screen if no key is pressed for more than 30 seconds, an error tone sounds and the telephone returns to standby.
- If you get an incoming call, a transferring call or page, the deleting operation is canceled and you can answer the call or page.
3) Press ▲ or ▼ to select “Yes” or “No”.

4) Press select/channel or delete/transfer.

When the pointer is at “Yes”:
A confirmation tone sounds and all stored Caller ID messages are deleted.

When the pointer is at “No”:
The display returns to the summary screen.
Using the Caller ID List

Calling a party from the Caller ID list

You can place a call from the Caller ID list. The DXI386-2 series stores up to 30 messages in each handset.

1) Press \textit{cid/menu}. Select the phone number that you want to dial by pressing $\textit{\textasciicircum}$ or $\textit{\textasciicircum}$.

2) Press \textit{talk/flash}. The displayed phone number dials automatically.

Long Distance calls and Area Code Setting/Cancellation

Pressing 1 while the incoming Caller ID information is displayed (in step 1) will place the prefix “1” in the display to set up for a long distance call. Pressing 3 will set or cancel an area code setting.

Dial edit

You can temporarily edit the Caller ID number that is displayed by pressing \textit{select/channel}. A cursor appears in the display. Press \textit{delete/transfer} to move the cursor left, enter the new phone number you would like to dial and then press \textit{talk/flash}. This will not change the number in the Caller ID list memory.

\textbf{note}

- You cannot make a call from the Caller ID list if your DXI386-2 series is connected to private branch exchange (PBX).
- When a long distance call has been set, “1” appears in the display.
Storing Caller ID messages in Memory dialing

Messages shown in the Caller ID list can be stored in memory dialing. Using the incoming call information (i.e., Caller ID list), the phone number of the party on the Caller ID list can be stored in memory.

1) Press `cid/menu`. Select the phone number to be stored from the Caller ID list by pressing `^` or `v`.

2) Press `mem`.

3) Press `^` and `v` or enter a number (0 - 9) to select the memory location to be stored.

4) Press `select/channel`. You hear a confirmation tone, and the number is stored in memory. The display returns to the Caller ID list.

If a message has already been stored in the selected memory number location, a confirmation screen is displayed. Press `^` to select “Yes”. Press `select/channel` to overwrite. The display returns to the Caller ID list.

You can not store a Caller ID message if no phone number appears in the message.
Changing the Digital Security Code

The digital security code is an identification code used to connect the handset and the main base unit. This cordless telephone uses a digital security code to prevent unauthorized access to your base unit. This security code prevents other cordless handset from making calls through your base unit. Normally, setting the code is not necessary.

The first time you charge your handset, the security code is automatically set. In the rare situation that you suspect another cordless telephone is using the same security code, you can change the code.

1) Remove the handset from the main base unit. Press and hold **find handset** on the main base.
2) The handset begins emitting a paging sound. While holding **find handset**, place the handset on the main base unit. The paging sound stops. Leave the handset on the main base for more than 3 seconds. A new random security code is set.

Installing the Beltclip

**To attach the beltclip**
Insert the beltclip into the holes on each side of the handset. Press down until it clicks.

**To remove the beltclip**
Pull both sides of the beltclip to release the tabs from the holes.

Headset Installation

Your phone may be used with an optional headset, the Uniden HS910. To use this feature, insert headset plug into the headset jack.

Your phone is ready for hands-free conversations.

(Headset may be purchased by calling the Uniden Parts Department or visiting the web site. See Page 7.)
Note on Power Sources

Battery replacement and handling
When the operating time becomes short, even after a battery is recharged, please replace the battery. With normal usage, your battery should last about one year. Please contact your place of purchase or the Uniden Parts Department for a replacement battery.

Warning: To avoid the risk of personal injury or property damage from fire or electrical shock, only use the Uniden battery model and Uniden adapter model specifically designated for this product.

Power Failure
During the period that the power is off, you will not be able to make or receive calls with the telephone.

Caution
• Use only specified Uniden battery pack (BT-905).
• Do not remove the battery from the handset to charge it.
• Never throw the battery into a fire, disassemble it, or heat it.
• Do not remove or damage the battery casing.

Maintenance

When slightly dirty
Wipe with a soft, dry cloth.

When very dirty
Wipe with a soft cloth that has been dampened with diluted, neutral detergent. Dry with a dry cloth.

When the charging terminals become dirty
Wipe with a dry cloth or a pencil eraser, if necessary. (See page 10 for the location of charging terminals.)

Caution
Do not use paint thinner, benzene, alcohol, or other chemical products. Doing so may discolor the surface of the telephone and damage the finish.
## Troubleshooting

If your phone is not performing to your expectations, please try these simple steps first.

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Suggestion</th>
</tr>
</thead>
</table>
| The status LED or charge LED won’t illuminate when the handset is placed in the main base. | • Make sure the AC adapters are plugged into each charging cradle and wall outlet.  
• Make sure both handsets are properly seated in each charging cradle.  
• Make sure the charging contacts on both handsets and charging cradles are clean. |
| The audio sounds weak and/or scratchy.                                  | • Move the handset and/or base to a different location away from metal objects or appliances and try again.  
• Press select/channel to help eliminate background noise.  
• Make sure that you are not too far from the main base. |
| Can’t make or receive calls.                                            | • Re-register both handsets (See page 12).  
• Check both ends of the main base telephone line cord.  
• Make sure the AC adapter is plugged into the main base and wall outlet.  
• Disconnect the AC adapter for a few minutes, then reconnect it.  
• Make sure that you are not too far from the main base. |
| The handset doesn’t ring or receive a page.                            | • Re-register both handsets (See page 12).  
• The battery pack may be weak. Charge the battery for 15-20 hours.  
• The handset may be too far away from the main base unit.  
• Place the main base unit away from appliances or metal objects.  
• Make sure the volume setting is not Ringer off. |
| Severe noise interference.                                             | • Keep the handset away from microwave ovens, computers, remote control toys, wireless microphones, alarm systems, intercoms, room monitors, fluorescent lights, and electrical appliances.  
• Move to another location or turn off the source of interference. |

General Information

The phone complies with FCC Parts 15 and 68.
Operating temperature: -10°C to 50°C (+14°F to +122°F)

AC Adapter Information
AC Adapter part number: AD-311
Input Voltage: 120V AC 55 mA
Output Voltage: 9V DC 210 mA

Battery Information
Battery part number: BT-905
Capacity: 600 mAH, 3.6V
Battery use time (per charge)
From fully charged
Talk mode duration: 7 hours
Standby mode duration: 10 days

*Note:* If the handset is left off of the main base, the actual Talk mode duration will be reduced respective to the amount of time the handset is off the main base.

Recharge your phone on a regular basis by returning the handset to the main base after each phone call. When the operating time becomes short, even after the battery is recharged, please replace the battery. With normal usage, the battery should last about one year.

A replacement Uniden adapter and battery may be purchased at your local Uniden dealer or by contacting the Uniden Parts Department (800) 554-3988. Hours are from 7:00 a.m. to 5:00 p.m. Central Time, Monday through Friday. We can also be reached on the web at www.uniden.com

Specifications, features, and availability of optional accessories are all subject to change without prior notice.
Precautions!
Before you read anything else, please observe the following:

Warning!
Uniden America Corporation DOES NOT represent this unit to be water-proof. To reduce the risk of fire, electrical shock, or damage to the unit, DO NOT expose this unit to rain or moisture.

Rechargeable Nickel-Cadmium Battery Warning
1. This equipment contains a rechargeable nickel-cadmium battery. Cadmium is a chemical known to the State of California to cause cancer.
2. The rechargeable nickel-cadmium battery contained in this equipment may explode if disposed of incorrectly. Do not burn.
3. Do not open or mutilate the battery pack. Released electrolyte is corrosive and may cause damage to the eyes or skin. It may be toxic if swallowed.
4. Protect the battery from moisture. Do not dispose of batteries in a fire. The cell may explode. Check the nickel-cadmium battery disposal package insert for disposal instructions.

Radio Interference
Radio interference may occasionally cause buzzing and humming in your cordless handset, or clicking noises in the base. In addition, if your telephone is in the base, please check around your home to see what appliances may be causing the problem. In addition, changes or modifications to this product not expressly approved by Uniden, or operation of this product in any way other than as detailed in the owner’s manual, could void your authority to operate this product. The FCC Wants You To Know Changes or modifications to this product not expressly approved by Uniden, or operation of this product in any way other than as detailed by the owner’s manual, could void your authority to operate this product. The equipment cannot be used on public coin phone service provided by the telephone company. Connection to party line service is subject to state tariffs. Contact the state public utility commission, public service commission or corporation commission for information.)

Range
Your new phone is designed to achieve the maximum possible range by transmitting and receiving according to the highest specifications set forth by the FCC. We have rated this phone to operate at a maximum range of miles, that applies in open fields. Actual performance depends on many factors, including but not limited to: nearby obstructions, weather conditions, electrical interference, and the equipment with which it is used.

Important Safety Instructions
When using your telephone equipment, these safety precautions should always be followed to reduce the risk of fire, electrical shock, or injury to persons:
1. Read and understand all instructions.
2. Follow all warnings and instructions marked on the product.
3. Unplug this product from the wall outlet before cleaning. Use a dry cloth for cleaning without liquid or aerosol cleaners.
4. Do not use this product near water, for example, near a bathtub, sink, kitchen sink or laundry tub, in a wet basement, or near a swimming pool.
5. Do not place this product on an unstable cart, stand, or table. The telephone may fall, causing serious damage to the unit.
6. Slots and openings in the cabinet and the bottom are provided for ventilation. To protect the product from overheating, these openings must not be blocked or covered. This product should not be placed near or over a radiator or heat register. This product should not be placed in a built-in installation unless proper ventilation is provided.
7. This product should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power supply to your home, consult your dealer or local power company.
8. Do not allow anything to rest on the power cord. Do not locate this product where the cord will be damaged by persons walking on it.
9. Do not overload wall outlets and extension cords, as this can result in a risk of fire or electrical shock.
10. Never push objects of any kind into this product through cabinet slots, as they may touch dangerous voltage points or short out parts that could result in a risk of fire or electric shock. Never spill liquid of any kind on the product.
11. To reduce the risk of electric shock, do not disassemble this product. Take it to qualified service personnel when service or repair work is required. Opening or removing covers may expose you to dangerous voltages or other risks. Incorrect reassembly can cause electric shock when the appliance is subsequently used.
12. Unplug this product from the wall outlet and refer servicing to qualified service personnel when service or repair is required. Opening or removing covers may expose you to dangerous voltages or other risks. Incorrect reassembly can cause electric shock when the appliance is subsequently used.
13. Do not use the telephone to report a gas leak in the vicinity of the leak.

Additional Battery Safety Precautions
Caution! To reduce the risk of fire or injury to persons by the battery, read and follow these instructions:
1. The battery or conductor may overheat and cause burns.
2. Always use the battery charger identified by Uniden for use with this equipment.
3. Do not expose or incinerate the battery pack in fire or water. Do not incinerate, as lithium batteries may explode in improper disposal.
4. Do not use or modify the battery pack. Released electrolyte is corrosive and may cause damage to the eyes or skin. It may be toxic if swallowed.
5. Use care in handling the battery in order not to short the battery with conducting materials such as rings, bracelets, and keys. The battery or conductor may overheat and cause burns.
6. The battery or conductor may overheat and cause burns.

SAVE THESE INSTRUCTIONS!
Important Electrical Considerations
Unplug all electrical appliances when you know an electrical storm is approaching. Lightning can pass through your household wiring and damage any device connected to it. This phone is no exception.

Warning! Please do not attempt to unplug any appliance during an electrical storm.

The FCC Wants You To Know
Changes or modifications to this product not expressly approved by Uniden, or operation of this product in any way other than as detailed by the owner’s manual, could void your authority to operate this product. The equipment cannot be used on public coin phone service provided by the telephone company. Connection to party line service is subject to state tariffs. Contact the state public utility commission, public service commission or corporation commission for information.)

Range
Your new phone is designed to achieve the maximum possible range by transmitting and receiving according to the highest specifications set forth by the FCC. We have rated this phone to operate at a maximum range of miles, that applies in open fields. Actual performance depends on many factors, including but not limited to: nearby obstructions, weather conditions, electrical interference, and the equipment with which it is used.

Telephone Line Problems
The FCC has granted the telephone company the right to disconnect service in the event that your phone causes problems on the telephone line. Also, the telephone company may make changes in facilities and services which may affect the operation of your unit. However, your telephone company must give adequate notice prior to such actions to allow you time for making necessary arrangements to continue an uninterrupted service.

If you are having trouble with your telephone service, you must first disconnect your phone to determine if it is the cause of your problem. If you determine that it is the cause, you must leave it disconnected until the trouble has been corrected.

Radio Interference
Radio interference may occasionally cause buzzing and humming in your cordless handset, or clicking noises in the base. This interference is caused by external sources such as TV, refrigerator, vacuum cleaner, fluorescent lighting, or electrical storm. Your unit is NOT DEFECTIVE. If these noises continue and are too distracting, please check around your home to see what appliances may be causing the problem.

[ 45 ]
Some equipment is wired directly to a phone jack, and these types of installations require a modular jack converter. This means you need to change the type of jack, possibly requiring a modular jack converter. If you hire someone to do this type of installation, you need to change it to a different channel.

Finally, it should be noted that some cordless telephones operate at frequencies that may cause interference to nearby TVs and VCRs. To minimize or prevent such interference, the base of the cordless telephone should not be placed near or on top of a TV or VCR. If interference is experienced, moving the cordless telephone farther away from the TV or VCR will often reduce or eliminate the interference.

More Than One Cordless Telephone

If you want to use more than one cordless telephone in your home, they must operate on different channels. Press the channel key to select a channel that provides the clearest communication.

Cordless Telephone Privacy

Cordless telephones are radio devices. Communications between the handset and base of your cordless telephone are audible between your telephone and the telephone of anyone in the vicinity. Consequently, any communications using your cordless telephone may not be private.

Installation Considerations

Selecting a Location

Before choosing a location for your new phone, there are some important guidelines you should consider:

- The location should be close to both a phone jack and continuous electrical service.
- Be sure there is sufficient space to fully extend the base antenna.
- The base can be placed on a desk or tabletop or mounted on a standard telephone wall plate.
- You should charge your new phone for 15-20 hours before completing the installation or using the handset.

Telephone Line Outlets

There are two types of phone outlets:

- Modular Jack
  - Most phone equipment available now uses modular jacks. Phone cords are fitted with a molded plastic connector which plugs into this type of jack.
  - If you do not have modular phone jacks, contact your local telephone company for information about their installation.

- Hardwired Jack
  - Some equipment is wired directly to a phone jack, and these types of installations require a modular jack converter. This type of installation is not difficult; however, you should contact your Uniden telephone dealer or a telephone supply store for advice about the proper adapter or converter for your particular situation.

Connecting the Telephone Cords

Consider these safety guidelines before connecting the telephone cords:

- Never install telephone wiring during a lightning storm.
- Never touch uninsulated telephone wires or terminals unless the telephone line has been disconnected at the network interface.
- Use caution when installing or modifying telephone lines.

Applying Power to the Base

This requires an AC outlet, without a switch to interrupt power, and also requires AC adapter. To receive power on the DC plug when the phone is placed in a desk or table, swap the power cord around the strain relief switch on the bottom of the base.

NOTE: Do not alter the shape of the blades of the polarized plug!

- If you cannot plug the AC adapter into the outlet, contact someone about replacing the outlet.
- Plug the AC Adapter into a standard 120 VAC wall outlet.
- Do not use an outlet controlled by a wall switch.
- Use only the Uniden AC Adapter supplied with this phone.

One Year Limited Warranty

Uniden America Corporation ("Uniden") warrants, for one year, to the original retail owner, this Uniden Product to be free from defects in materials and craftsmanship with only the limitations or exclusions set out below.

ELEMENTS OF WARRANTY: Uniden warrants for one year, to the original retail owner of this Uniden Product, that the Uniden Product will be free from defects in materials and craftsmanship with only the limitations or exclusions set out below.

PROCEDURE FOR OBTAINING PERFORMANCE OF WARRANTY: If, after following the instructions in the owner manual you are certain that the Product is defective, pack the Product carefully (preferably in its original packaging). The Product should include all parts and accessories originally packed with the Product. Include evidence of original purchase and a note describing the defect that has caused you to return it. The Product should be shipped freight prepaid, by traceable means, to warrantor at:

Uniden America Corporation
Parts and Service Division
4700 Amon Carter Blvd.
Fort Worth, TX 76155
(800) 297-1023, 8 a.m. to 5 p.m. Central, Monday through Friday.

WARRANTY DURATION: This warranty shall terminate 12 months after the date of original retail sale. The warranty is invalid if the Product is (A) damaged or not maintained as reasonable or necessary, (B) modified, altered, or used as part of any conversion kit, subassemblies, or any configurations not sold by Uniden, (C) improperly installed, (D) serviced or repaired by someone other than an authorized Uniden service center for a defect or malfunction covered by this warranty, (E) used in any conjunction with equipment or parts not manufactured by Uniden, or (F) installed or programmed by anyone other than as detailed by the owner manual for this product.

LEGAL REMEDIES: This warranty gives you specific legal rights, and you may have other rights which vary from state to state. This warranty is void outside the United States of America.

I.C. Notice

TERMINAL EQUIPMENT

NOTICE: This equipment meets the applicable Industry Canada Terminal Equipment Technical Specifications. This is confirmed by the registration number. The abbreviation, IC, before the registration number signifies that registration was performed based on a Declaration of Conformity indicating that Industry Canada technical specifications were met. It does not imply that Industry Canada approved the equipment.

NOTICE: The Ringer Equivalence Number (REN) for this terminal equipment is marked on the equipment itself. The REN assigned to each terminal equipment provides an indication of the maximum number of terminals allowed to be connected to a telephone interface. The termination on an interface may consist of any combination of devices subject only to the requirement that the sum of the Ringer Equivalence Numbers of all the devices does not exceed five.

RADIO EQUIPMENT

The term “IC:” before the radio certification number only signifies that Industry Canada technical specifications were met.

Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device. “Privacy of communications may not be ensured when using this telephone”.
