Welcome

Congratulations on your purchase of the Uniden EXI2960 (white) or EXI2965 (charcoal) cordless telephone. This phone is designed and engineered to exacting standards for reliability, long life, and outstanding performance.

Note: Some illustrations in this manual may differ from the actual unit for explanation purpose.

Features

- 900 MHz Extended Range Technology
- 3 Line Backlit Display
- Caller ID and Call Waiting Caller ID
- 10 Number Memory Dialing
- Face Up/Face Down Charging
- 32 Digit Redial
- Flash and Pause
- Tone/Pulse Dialing
- Page/Find
- 7 Hour Talk Time/14 Day Standby Time
- Handset Earpiece and Ringer Volume Control
- Hearing Aid Compatible
- 40 Channel Autoscan

The EXI2960/EXI2965 features include AutoTalk™ and AutoStandby™. AutoTalk allows you to answer a call by just removing the handset from the base so you don’t have to waste time pushing buttons or flipping switches. AutoStandby allows you to hang up by simply returning the handset to the base.

The UltraClear Plus™ true compander circuitry virtually eliminates background noise. This innovative technology, together with 40 different channels, provides you with the best possible reception during all your conversations.

To protect you against misbilled calls which might result from your phone being activated by other equipment, the EXI2960/EXI2965 has Random Code™ digital security which automatically selects one of over 65,000 digital security codes for the handset and base. Also, the AutoSecure™ feature electronically locks your phone when the handset is in the base.

Be sure to visit our web site: www.uniden.com

Read this First

This cordless telephone must be set up before use. Follow these steps:

**Step 1 (page 4)**
Unpack the telephone and accessories.

**Step 2 (page 5)**
Next, choose the best location to set up the base unit.

**Step 3 (page 6 to 9)**
Then, insert the battery pack into the handset. Connect the base unit. You must charge the battery pack for **15-20 hours before plugging into the telephone line and using the phone**.

**Step 4 (page 12 to 13)**
Finally, set the Caller ID options and store your area code in the memory to use the Caller ID service.

**About the digital security code**
This cordless telephone uses a digital security code to prevent unauthorized access to your base unit. This security code prevents other cordless handset from making calls through your base unit.

A random security code will be assigned automatically between your base unit and handset when you charge the battery pack for the first time.

If you want to reset the security code, see page 27.

**Note:** Skip the area code setting if your calling area requires 10-digit dialing.
Checking the Package Contents

Make sure you have received the following items in the package. If any of these items are missing or damaged, contact the Uniden Parts Department.

- Base unit
- Handset
- AC adapter
- Rechargeable battery
- Telephone cord
- Beltclip

Also included:
- This Owner’s Manual
- Quick Reference Guide
- Precautions and Important Safety Instructions/Warranty Information
- Other Printed Material

Uniden Parts Department at (800) 554-3988
Hours: M-F 7:00 a.m. to 5:00 p.m. CST. We can also be reached on the web at www.uniden.com
Setting up the Phone

**Do the following steps:**

A. Choose the best location
B. Install the battery pack
C. Connect the base unit
D. Choose the dialing mode

**A. Choose the best location**

Before choosing a location for your new phone, read the INSTALLATION CONSIDERATIONS included in the PRECAUTIONS AND IMPORTANT SAFETY INSTRUCTIONS brochure. Here are some important guidelines you should consider:

- The location should be close to both a phone jack and a continuous power outlet which is not switchable.
- Keep the base and handset away from sources of electrical noise such as motors, microwave ovens, and fluorescent lighting.
- Be sure there is sufficient space to raise the base antenna to a vertical position.
- The base can be placed on a desk, tabletop, or mounted on a standard wall plate.
B. Install the battery pack

Charge the battery pack for at least 15-20 hours before plugging the phone line into your phone.

1) Press in on the battery cover release and slide the cover down until it comes off.

2) Connect the battery pack connector observing correct polarity (black and red wires) to the jack inside the battery compartment.

   Do not exert any force on this connection. It could cause damage to the battery or to the handset. The plastic connectors will fit together in only one way. Once you are certain that you have made a good connection, then insert the battery pack into the battery compartment. Do not pinch the wires.

3) Securely close the battery compartment cover by sliding it up until it snaps into place.

4) Place the handset on the base. Remove the beltclip, if attached, for face up charging.

Battery use time (per charge)

From fully charged
- Seven hours continuous use
- Fourteen days when the handset is in the standby mode
Low Battery Alert
When the battery pack is very low and needs to be charged, the phone is programmed to eliminate functions in order to save power. If the phone is not in use, "Low Battery" appears on the LCD and none of the keys will operate.

If the phone is in use, "Low Battery" flashes and the handset beeps. Complete your conversation as quickly as possible and return the handset to the base unit for charging.

The last number dialed in the redial memory, the names and the numbers stored in the memory locations are retained for up to 30 minutes while you replace the battery pack.

Cleaning the Battery Charging Contacts
To maintain a good charge, it is important to clean the battery contacts on the handset and base unit with a dry cloth or a pencil eraser about once month. Do not use any liquids or solvents.

C. Connect the base unit
1) Connect the AC adapter to the DC IN 9V jack and to a standard 120V AC wall outlet.
2) Set the base on a desk or tabletop, and place the handset on the base unit as shown. Remove the beltclip, if attached, for face up charging. (See "Mounting the Base Unit on a Wall", on page 11.)

3) Then raise the antenna to a vertical position.

4) Make sure that the status LED lights. If the LED does not light, check to see that the AC adapter is plugged in and that the handset makes good contact with the base charging contacts.

- Use only the supplied AD-310 AC adapter. Do not use any other AC adapter.
- Connect the AC adapter to a continuous power supply.
- Place the base unit close to the AC outlet so that you can unplug the AC adapter easily.
- After installing the battery pack in the handset, charge your handset at least 15-20 hours before plugging into the phone line. Once the handset battery pack is fully charged, connect the telephone line cord to the base and telephone wall outlet.

5) Connect the telephone line cord to the TEL LINE jack and to a telephone outlet once the handset is fully charged.

- If your telephone outlet isn’t modular, contact your telephone company for assistance.
D. Choose the dialing mode
Most phone systems use tone dialing which sends DTMF tones through the phone lines. However some phone systems still use pulse dialing such as in rural areas. The default setting is tone dialing. Depending on your dialing system, set the mode as follows:

1) Press and hold flash until you hear a confirmation tone.
   The current setting appears next to Dial Mode.
2) To set the dial mode for pulse dialing, press #. 
   Or to set the dial mode for tone dialing, press */tone. A confirmation tone sounds to indicate the setting is complete.

• If you are not sure of your dialing system, set for tone dialing. Make a trial call. If the call connects, leave the setting as is, otherwise set for pulse dialing.
• If your phone system requires pulse dialing and you need to send the DTMF tones for certain situations during a call, you may “switch-over” to tone dialing. (Refer to “Tone Dialing Switch-over” on page 15.)
Mounting the Base Unit on a Wall

**Setting the handset retainer clip for wall mounting**

1) On the base unit, pull the handset retainer clip out of the slot and rotate it clockwise 180 degrees.

2) Flip the retainer clip from front to back. Slide it back into the slot so that the lip of the retainer is up and the ▼ is down. The retainer holds the handset in place.

**Standard wall plate mounting**

This phone can be mounted on any standard wall plate.

1) Plug the AC adapter into the DC IN 9V jack.

2) Wrap the AC adapter cord inside the molded wiring channel as shown.

3) Plug the AC adapter into a standard 120V AC wall outlet.

4) Place the handset on the base unit and charge for 15-20 hours.

5) Plug the telephone line cord into the TEL LINE jack. Wrap the cord inside the molded wiring channel as shown.

6) Plug the telephone line cord into the telephone outlet.

7) Raise the antenna to a vertical position.

8) Align the mounting slots on the base with the mounting posts on the wall. Then push in and down until the phone is firmly seated.
Direct wall mounting

If you don't have a standard wall plate, you can mount your phone directly to the wall. Before doing this, consider the following:

- Avoid electrical cables, pipes, or other items behind the mounting location that could cause a hazard when inserting screws into the wall.
- Try to mount your phone within 5 feet of a working phone jack to avoid excessive cord lengths.
- Make sure the wall material is capable of supporting the weight of the base and handset.
- Use #10 screws (minimum length of 1-3/8 inches) with anchoring devices suitable for the wall material where the base unit will be placed.

1) Insert two mounting screws into the wall, (with their appropriate anchoring device), 3-15/16 inches apart. Allow about 1/8 of an inch between the wall and screw heads for mounting the phone.

2) Set the retainer clip if necessary.

3) Refer to steps 1 through 8 on page 10 to mount the telephone.
Setting Caller ID Options

There are three Caller ID setup options available. They are AutoTalk, CIDCW (Caller ID on Call Waiting), and Area Code. See page 13 for Area Code setup instructions.

AutoTalk allows you to answer the phone without pressing the talk button. If the phone rings when AutoTalk is on, simply remove the handset from the base and the phone automatically answers the call. Or if the handset is not on the base, press any key to answer the call. If the phone rings when AutoTalk is off, you must press talk to answer the call.

To change your Caller ID options:

1) Press and hold call id. The following screen appears.

2) Use ▲ and ▼ or a number key (1-3) to move the pointer to the selection that you would like to change. Press select to toggle between "On" and "Off" for each setting.

3) After you have made your Caller ID selections, press call id and return the handset to the base.
Entering Your Area Code

If you enter a 3-digit area code number in the Area Code option, your local area code does not appear in Caller ID messages. Do not program this option, if your calling area requires 10-digit dialing. When reviewing Caller ID messages, you will see only the local seven digit number. For calls received from outside your local area code, you will see a full 10-digit number.

1) When the phone is in the standby mode, press and hold call id. The Caller ID setting screen appears.

2) Press 3 to select "Area Code" or press ▼ twice.

3) Press select.

4) Use the number keys (0 to 9) to enter the 3-digit area code.

5) Press select. A tone sounds and the displayed area code is entered.

6) Press call id to complete the setting. Or return the handset to the base unit to complete the setting. The handset returns to the standby mode.

When the area code has already been stored in memory, the stored area code will be displayed. To change it, use the delete and number keys to enter the new area code. Then press select. A confirmation tone sounds.

To complete the setting, press call id or return the handset to the base unit.

### Terminology

Throughout this manual, terms such as Standby and Talk Mode are used. Below is the terminology explanation.

- **Standby Mode** - The handset is not in use, off the base, and \textit{talk} has not been pressed. A dial tone is not present.
- **Talk Mode** - The handset is off the base and \textit{talk} has been pressed enabling a dial tone.

**Note** Refer to page 12 “Setting Caller ID Options” to turn on Auto Talk feature if desired.
Adjusting the Handset Ringer and Earpiece Volume

**Ringer tone and volume**
When the phone is in standby mode, pressing the vol ▼ or ▲ key on the handset selects the handset ringer volume and tone. There are two ringer tones each with two volume levels. Continue pressing the vol ▼ or ▲ key to listen to all tone and volume levels. The phone keeps the last ringer tone and volume setting selected.

**Earpiece volume**
The handset earpiece volume settings (Low, Medium, High and Maximum) can only be adjusted during a call. Press vol ▼ or ▲ to select Low, Medium, High and Maximum. When you hang up, the phone keeps the last volume setting selected.

**Redial**
The *redial/p* key redials the last number dialed. The redialed number can be up to 32 digits long.

**Tone Dialing Switch-over**
Some telephone companies use equipment that require pulse dialing (sometimes referred to as rotary dialing). If you need to enter tone dialing digits, you can switch-over to tone dialing during the call. An example of this could be entering your bank account number after you have called your bank. The digits of your bank account can be sent using DTMF tones.

Initially make your call with the pulse dialing mode. Once your call connects, press */tone*. Enter the desired number (like in example above the bank account number). These digits will be sent as tone dialing. This special number can be stored in a memory location and used for Chain Dialing (See page 20.) Once the call ends, the tone mode is canceled and pulse dialing mode resumes.
Traveling Out-of-Range
During a call, as you begin to move your handset too far from your base unit, noise increases. If you pass the range limits of the base unit, your call will terminate within 30 seconds.

Selecting a Different Channel
If you encounter interference while using your phone, you can manually change the phone’s channel for clear operation. Interference can come from appliances or other phones in your home. This function works only when the phone is in use.

During the course of a conversation, if you hear static or noise which makes it difficult to hear, press chan. "Scanning" appears on the display, indicating the phone is changing to another channel.

Page
To locate the handset (while it's off the base), press page/find on the base. The handset beeps for 60 seconds.
Paging is canceled when pressing any key or the handset is returned to the base.

Flash and Call Waiting
If you have "Call Waiting" service and a call waiting tone sounds while you are on a call, press flash to accept the waiting call. There is a short pause, then you will hear the new caller. To return to the original caller, press flash again.

Note: You must subscribe through your local telephone company to receive Call Waiting Service.
Storing Phone Numbers and Names
Memory Dialing allows you to dial a number using just a few key strokes. Your EXI2960/EXI2965 stores up to 10 names/numbers in handset.

1) Press and hold m until “Memory Store” is displayed.
2) Press ▲ and ▼ or enter a number (0 - 9) to select the memory location where you would like to store the number.
3) Press select. The following screen appears and a cursor flashes indicating that the display is ready for the name to be entered.

   If this screen appears, the selected memory location is already stored. Then you must either change the entry in this location, clear the entry in this location, or select “Go Back” to choose another location.

4) To enter a name (up to 14 characters), use the number keys.
   - See the “Steps for entering names and special characters”. (See page 18)
   - Use #► and */tone◄ to move the cursor to the desired location.
   - Use delete to delete characters as needed.
   - Press and hold delete to delete all the characters.
   - If a name is not required, go to step 5.

5) Press select. “Store Name” is displayed. The cursor flashes indicating that the display is ready for the number to be entered.

6) Use the number keys to enter the phone number. The phone number cannot exceed 20 digits.
   - Use redial/p to enter pause in the dialing sequence.
     The display shows a “P”. Each pause counts as one digit and represents a two second delay of time between the digits as they are sent.
   - Use delete to delete digits as needed.

7) Press select. The handset beeps and displays the confirmation screen. Memory storage is complete. For example, if you store a name and number into memory location number 7, the display shows “Memory 7 Stored”. If you store the number into memory location number 8, the display shows “Memory 8”. After about 2 seconds, “Memory Store” is displayed. Repeat steps 2 - 7 to store more numbers.

8) Press m to return to standby mode.
Steps for Entering Names and Special Characters

Refer to the letters on the number keys to select the desired characters. With each press of a numeric key, the displayed character appears in the following order: Upper case letters first, lower case letters next, and finally the number corresponding to the key.

</table>

If you make a mistake while entering a name;
Use */tone ← or #→ to move the cursor to the incorrect character. Press delete to erase the wrong character, then enter the correct character. To delete all characters, press and hold delete.

For example, to enter Uniden:
1) Pick up the handset. Press and hold m.
2) Enter a number or press ▲, ▼ to select a memory location number.
3) Press select.
4) Press 8 twice.
5) Press 6 five times.
6) Press 4 six times.
7) Press 3 four times, then press #→ to move the cursor to the right.
   If the next character uses the same number key, you must press #→ to move the cursor over. Otherwise the next time you press the number key, it changes the character that was previously set.
8) Press 3 five times.
9) Press 6 five times.
10) When finished, press select.
To continue to store the telephone number, proceed to step 6 on page 17.

Note:
The pause feature is useful for long distance calling, credit card dialing, or sequences that require a pause between digits.
Making Calls with Memory Dialing

Memory dialing from Standby Mode

1) Press m.
   The handset displays your programmed memory locations.

2) Press ▼ and ▲ or enter the number (0 - 9) to select the memory location you would like to dial.

3) Press talk. “Talk” and the volume setting appear on the display. Then the displayed number is dialed.

Display a Programmed Number

Use # and */tone to toggle between the names display and the numbers display.

<table>
<thead>
<tr>
<th>Program name</th>
<th>Program number</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 UNIDEN CORP</td>
<td>1 8002371023</td>
</tr>
<tr>
<td>2 JOHN DOE</td>
<td>2 5452935</td>
</tr>
<tr>
<td>3 MOM AND DAD</td>
<td>3 817551212</td>
</tr>
</tbody>
</table>

When the stored phone number has 15 or more digits, "" is displayed next to the 13th digit. Press # ▲ to see the extra digits and */tone ▲ to return.

Memory dialing from Talk Mode

1) Press talk. "Talk" and the volume setting appears.

2) Press m.

3) Enter a number (0 - 9) to select the memory location of the desired phone number. The selected phone number is displayed. Then the number is dialed.

4) To hang up, press talk.
Chain Dialing

The 10 memory locations on the handset are not limited to phone numbers. You may want to store in memory a group of numbers (up to 20 digits) that you need to enter once your call connects. This is referred to as Chain Dialing.

An example of this is a bank account number. Once you have called your bank, when you are prompted to enter the account number, simply press m and then the location where the special number has been stored.

Store your special number with identifying name in memory as you would a phone number. (Refer to "Storing Phone Numbers and Names" on page 17.) Enter a pause as necessary in the sequence. A pause counts as one digit and represents a two second delay in time between digits as they are sent.

Editing a Stored Name and/or Phone Number

1) Press and hold m until "Memory Store" is displayed.
2) Press ▲ and ▼ or enter a number (0 - 9) to select the memory location you would like to edit.
3) Press select.
   The following screen appears with the memory location number that you have selected in the display.
4) Press ▲ or ▼ to select "Edit Memory", then press select. The following screen appears. The cursor flashes indicating that the display is ready for the name to be edited. When a name has not been stored, the cursor appears at the beginning of the second line.
5) Use the number keys, *, /tone, #, or delete to edit the name. (See page 17.) To edit only the phone number, skip this step.
6) Press select. The following screen appears.
   The cursor flashes indicating that the display is ready for the number to be edited.
7) Use the number key, redial/p or delete to edit the phone number.
   The phone number cannot exceed 20 digits. (See page 17.) If you don’t want to change the phone number, skip this step.
8) Press select. The handset beeps and displays the confirmation screen. The memory storage is complete.
   For example, if you store a name and number into memory location number 1, the display shows "Memory 1 Stored". After about 2 seconds, "Memory Store" is displayed.

9) Press m to return to standby mode.

Erasing a Stored Name and Phone Number

1) Press and hold m until "Memory Store" is displayed.

2) Press ▲ and ▼ or enter a number (0 - 9) to select the memory location you would like to edit.

3) Press select.
   The following screen appears with the memory location number that you have selected in the display.

4) Press ▼ to move the pointer down to "Delete Memory".

5) Press select. The following confirmation screen appears.

6) Press ▲ to move the pointer to "Yes".

7) Press select or delete.
   The following screen appears.

8) After a few seconds the display returns to the "Memory Store" screen.
   You may delete the information in another memory location (return to step 2) or press m to return to standby.
Caller ID

You must subscribe to Caller ID service to use this feature.
When the telephone rings, the Caller ID feature allows you to view the caller’s name and phone number on the display before you answer the phone.
The handset displays the phone number of the incoming call, the name, time, and the number of calls. Additionally, you can dial the displayed number and store the information for memory dialing.
Make sure you have turned on the Caller ID/Call Waiting feature. (See page 12.)

When the Telephone Rings
1) When the Caller ID message is received, the display shows the caller’s phone number along with the date and time. The incoming call information is stored in the Caller ID record. If the Caller ID service includes the caller’s name, the caller’s name appears on the display (up to 15 letters).

Here are some typical displays;

When the phone number and name data are received

<table>
<thead>
<tr>
<th>Date and time received</th>

</tbody>
</table>

2) When you pick up the phone, the display changes to “Talk”. (AutoTalk feature is set to on.)
Viewing the Caller ID Message List

The Caller ID list stores information for up to 30 incoming calls - even unanswered calls.

1) Press **call id**.
   - The summary screen appears.
   - The screen shows the number of new messages and total messages.

2) Press ▼ to display the latest Caller ID message.

3) Press ▼ to see the next message. Or press ▲ to see previous message.

4) Press **call id** to return to standby.

Deleting Information from the Caller ID List

The EXI2960/EXI2965 stores up to 30 messages. If the phone receives the 31st message, the oldest one in the list is automatically deleted. Caller ID data can also be deleted manually.

Deleting a Caller ID message

1) Press **call id**. Display the message to be deleted from the Caller ID list by pressing ▲ or ▼.

2) Press **delete**.

3) Press ▲ or ▼ to select “Yes” or “No”.

4) Press **select** or **delete**.

   **When the pointer is at “Yes”:**
   - A tone sounds and the Caller ID message is deleted.
   - The next Caller ID message is then displayed.

   **When the pointer is at “No”:**
   - The display returns to the Caller ID message.
Deleting all Caller ID names/numbers

1) Press *call id*.

2) Press *delete*.

3) Press ▲ or ▼ to select "Yes" or "No".

4) Press *select* or *delete*.

*When the pointer is at "Yes":*
A tone sounds and all stored Caller ID messages are deleted.

*When the pointer is at "No":*
The display returns to the summary screen.

---

**Note**

- While using the "Delete All?" or "Delete Message?" screen if no key is pressed for more than 20 seconds, an error tone sounds and the telephone returns to standby.

- If you get an incoming call or page, the deleting operation is canceled and the telephone returns to standby so you can answer the call or page.

---

[24] CALLER ID FEATURES
Using the Caller ID List

Calling a party from the Caller ID list

You can place a call from the Caller ID list. The EXI2960/EXI2965 stores up to 30 messages.

1) Press call id. Select the phone number that you want to dial by pressing ▲ or ▼.
2) Press talk. The displayed phone number dials automatically.

Long Distance calls and Area Code Setting/Cancellation

Pressing 1 while the incoming Caller ID information is displayed (in step 1) will place the prefix “1” in the display to set up for a long distance call. Pressing 3 will set or cancel an area code setting.

Dial edit

You can temporarily edit the Caller ID number that is displayed by pressing select. A cursor appears in the display. Press to move the cursor left, make your changes and then press . This will not change the number in the Caller ID list memory.

If you want to save this new number, store the information in memory. (See page 17.)

• You cannot make a call from the Caller ID list if your EXI2960/EXI2965 is connected to private branch exchange (PBX).

• When a long distance call has been set, “1” appears in the display.
**Storing Caller ID messages in Memory dialing**

Messages shown in the Caller ID list can be stored in memory dialing. Using the incoming call information (i.e., Caller ID list), the phone number of the party on the Caller ID list can be stored in memory.

1) Press `call id.`
   Select the phone number to be stored from the Caller ID list by pressing ▲ or ▼.

2) Press `m`.

3) Press ▲ and ▼ or enter a number (0 - 9) to select the memory location to be stored.

4) Press `select`.
   The number is stored in memory, and the display returns to the Caller ID list.

---

**note**

You cannot store a Caller ID message if no phone number appears in the message.

---

**note**

If a message has already been stored in the selected memory number location, a confirmation screen is displayed. Press ▲ to select "Yes". Press `select` to overwrite. The display returns to the Caller ID list.
Changing the Digital Security Code

The digital security code is an identification code used to connect the handset and the base unit. Normally, setting the code is not necessary. The first time you charge your handset, the security code is automatically set. (See "About the digital security code", page 3.)

In the rare situation that you suspect another cordless telephone is using the same security code, you can change the code.

1) Remove the handset from the base unit. Press and hold page/find on the base.

2) The handset begins emitting a paging sound. While holding page/find for at least 3 seconds, place the handset on the base unit. The paging sound stops. Leave the handset on the base for more than 5 seconds or until the status LED stops flashing. A new random security code is set.
Installing the Beltclip

To attach the beltclip
Insert the beltclip into the holes on each side of the handset. Press down until it clicks.

To remove the beltclip
Pull both sides of the beltclip to release the tabs from the holes.

Headset Installation
Your phone may be used with an optional headset, the Uniden HS910. To use this feature, insert headset plug into the headset jack. Your phone is ready for hands-free conversations.
(Headset may be purchased by calling the Uniden Parts Department or visiting the website. See Page 4.)
Note on Power Sources

Battery replacement and handling
When the operating time becomes short, even after a battery is recharged, please replace the battery.
With normal usage, your battery should last about one year.
Please contact your place of purchase or the Uniden Parts Department for a replacement battery.

Power Failure
During the period that the power is off, you will not be able to make or receive calls with the telephone.

Maintenance

When slightly dirty
Wipe with a soft, dry cloth.

When very dirty
Wipe with a soft cloth that has been dampened with diluted, neutral detergent. Dry with a dry cloth.

When the charging terminals become dirty
Wipe with a dry cloth or a pencil eraser, if necessary.

Caution
- Use the specified battery pack.
- Do not remove the battery from the handset to charge it.
- Never throw the battery into a fire, disassemble it, or heat it.
- Do not remove or damage the battery casing.

Caution
Do not use paint thinner, benzene, alcohol, or other chemical products. Doing so may discolor the surface of the telephone and damage the finish.

Recycling Nickel-Cadmium Batteries
Nickel-cadmium cells are used in the battery pack.
Please take your used nickel-cadmium battery pack to a store that recycles nickel-cadmium batteries.
### Troubleshooting

If your phone is not performing to your expectations, please try these simple steps first.

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Suggestion</th>
</tr>
</thead>
<tbody>
<tr>
<td>The <em>status</em> LED won't light when the handset is placed in the base.</td>
<td>• Make sure the AC adapter is plugged into the base and wall outlet.</td>
</tr>
<tr>
<td></td>
<td>• Make sure the handset is properly seated in base.</td>
</tr>
<tr>
<td></td>
<td>• Make sure the charging contacts on the handset and base are clean.</td>
</tr>
<tr>
<td>The audio sounds weak and/or scratchy.</td>
<td>• Make sure that the base antenna is in a vertical position.</td>
</tr>
<tr>
<td></td>
<td>• Move the handset and/or base to a different location away from metal objects or appliances and try again.</td>
</tr>
<tr>
<td></td>
<td>• Press <em>chan</em> to help eliminate background noise.</td>
</tr>
<tr>
<td></td>
<td>• Make sure that you are not too far from the base.</td>
</tr>
<tr>
<td>Can't make or receive calls.</td>
<td>• Check both ends of the base telephone line cord.</td>
</tr>
<tr>
<td></td>
<td>• Make sure the AC adapter is plugged into the base and wall outlet.</td>
</tr>
<tr>
<td></td>
<td>• Disconnect the AC adapter for a few minutes, then reconnect it.</td>
</tr>
<tr>
<td></td>
<td>• Reset the digital security code (See page 27).</td>
</tr>
<tr>
<td></td>
<td>• Make sure that you are not too far from the base.</td>
</tr>
<tr>
<td>The handset doesn't ring or receive a page.</td>
<td>• The battery pack may be weak. Charge the battery on the base unit for 15-20 hours.</td>
</tr>
<tr>
<td></td>
<td>• The handset may be too far away from the base unit.</td>
</tr>
<tr>
<td></td>
<td>• Place the base unit away from appliances or metal objects.</td>
</tr>
<tr>
<td></td>
<td>• Reset the digital security code (See page 27).</td>

</tbody>
</table>
### Symptom

**Severe noise interference.**

- Keep the handset away from microwave ovens, computers, remote control toys, wireless microphones, alarm systems, intercoms, room monitors, fluorescent lights, and electrical appliances.
- Move to another location or turn off the source of interference.

**The Caller ID does not display.**

- The handset was picked up before the second ring.
- The call was placed through a switch board.
- Call your local telephone company to verify your Caller ID service is current.
- Charge the handset.

**If you still have a problem.**

- Call our customer hot line at 1-800-297-1023.

### General Information

The phone complies with FCC Parts 15 and 68.

**Operating temperature:** -10°C to 50°C (+14°F to +122°F)

### AC Adapter Information

- **AC Adapter part number:** AD-310
- **Input Voltage:** 120V AC 60Hz
- **Output Voltage:** 9V DC 210 mA

### Battery Information

- **Battery part number:** BT-905
- **Capacity:** 600 mAH, 3.6V
- **Battery use time (per charge)**
  - **Talk mode duration:** 7 hours
  - **Standby mode duration:** 14 days

---

If the handset is left off of the base, the actual Talk mode duration will be reduced respective to the amount of time the handset is off the base.

Recharge your phone on a regular basis by returning the handset to the base after each phone call. When the operating time becomes short, even after the battery is recharged, please replace the battery. With normal usage, the battery should last about one year.

Replacement batteries may be purchased at your local Uniden dealer or by contacting the Uniden Parts Department (800) 554-3988. Hours are from 7:00 a.m. to 5:00 p.m. Central Time, Monday through Friday. We can also be reached on the web at [www.uniden.com](http://www.uniden.com).

*Specifications, features, and availability of optional accessories are all subject to change without prior notice.*

---

### Notes

- If the handset is left off of the base, the actual Talk mode duration will be reduced respective to the amount of time the handset is off the base.
