Congratulations on your purchase of the Uniden EXI 6960 cordless telephone. This phone is designed for reliability, long life, and outstanding performance.

**FEATURES**

- 900 Mhz Extended Range
- 3-line, 16 Character Backlit Handset Display
- 32 Digit Redial
- Pulse/Tone Dialing
- 14 Day Standby Battery Life
- Page/Find
- Call Waiting Caller ID
- 30 Number Caller ID Memory
- 10 Memory Dial Locations
- Handset Earpiece and Ringer Volume Control
- 7 Hour Talk Time
- Hearing Aid Compatible

The EXI 6960 features include AutoTalk and AutoStandby. AutoTalk allows you to answer a call by just removing the handset from the base so you don’t have to waste time pushing buttons or flipping switches. AutoStandby allows you to hang up by simply returning the handset to the base.

The UltraClear Plus true compander circuitry virtually eliminates background noise. This innovative technology, together with 40 different channels, provides you with the best possible reception during all your conversations.

To protect you against misbilled calls which might result from your phone being activated by other equipment, the EXI 6960 has Random Code™ digital security which automatically selects one of over 65,000 digital security codes for the handset and base. Also, the AutoSecure™ feature electronically locks your phone when the handset is in the base.

To get the most from your phone, please read this reference guide thoroughly. Also, be sure to complete the product registration form and mail it in.

**Be sure to visit our web site at:** www.uniden.com
INCLUDED IN YOUR PACKAGE

- Handset
- Base
- AC Adapter
- Rechargeable Battery
- Long Telephone Cord
- This Owner’s Manual
- Precautions and Important Safety Instructions
- Registration Card
Installing and Adjusting Your Phone

DESKTOP/TABLETOP INSTALLATION

1) Plug the AC adapter cord into the DC input jack on the back of the base, then place the AC adapter cord inside the molded strain relief.

2) Plug one end of the long telephone cord into the TEL LINE jack on the base, then place the telephone cord into the right molded channel cord holder.

3) Plug the other end of the long telephone cord into the telephone wall jack. (Remember, the phone must be fully charged before you can use it.)
4) Plug the AC adapter into a standard 120 VAC wall outlet.

5) Raise the antenna to a vertical position.

**WALL INSTALLATION**

- **Setting the Handset Retainer for Wall Mounting**

1) Remove the handset retainer on the base by sliding it upward.

---

**HINT**

Before using your phone, fully charge the Nickel-Cadmium battery pack for 15-20 hours.

**WARNING**

Place the power cord so that it does not create a trip hazard or where it could become chafed and create an electrical hazard or fire.

Use only the Uniden AC adapter supplied with this phone and DO NOT use an outlet controlled by a wall switch.
2) Flip the handset retainer over so the tab is facing up.

3) Slide the handset retainer back onto the base.

▼ Standard Wall Plate Mounting
This phone can be mounted on any standard AT&T or GTE wall plate.

1) Plug the AC adapter into the DC input jack on the back of the base, then place the AC adapter cord inside the left molded channel cord holder.

DO NOT use an outlet controlled by a wall switch.

Before you plug the other end of the telephone cord into the modular jack on the wall, charge the battery (refer to “Charging the Battery Pack,” page 11).

2) Plug a short telephone cord into the TEL LINE jack on the base, then place the telephone cord inside the right molded channel cord holder.
3) Plug the other end of the cord into the wall jack. (*Remember, the phone must be fully charged before you can use it.*)

4) Place the base on the two posts of the wall plate and slide it downward to secure.

5) Plug the AC adapter into a standard 120 VAC wall outlet that is not controlled by a wall switch.

6) Raise the antenna on the base.
Direct Wall Mounting

If you don’t have a standard wall plate, you can mount your phone directly to the wall. Before mounting your cordless telephone, consider the following:

• Select a location away from electrical cables, pipes, or other items behind the mounting location. Inserting screws into areas such as this can be hazardous.
• Try to mount your phone within 10 - 15 feet of a working phone jack in order to avoid excessive cord length. Remember, you are not mounting your phone to a wall plate with a built-in phone jack.
• If the selected mounting area has no wooden support beams directly behind it, you will need the appropriate anchoring devices in order for the wall to properly support your phone.

1) Insert two mounting screws into the wall, with their appropriate anchoring device if necessary, 3-15/16 inches apart. Allow about 3/16 of an inch between the wall and screw heads for mounting the phone.

2) Set the handset retainer. (Refer to “Setting the Handset Retainer for Wall Mounting” on page 4.)

3) Plug the AC adapter into the DC input jack on the back of the base and place the cord inside the left molded channel cord holder.
4) Plug one end of the long telephone cord into the **TEL LINE** jack on the back of the base and place the telephone cord into the right molded channel cord holder.

5) Place the base on the screws and push it downward to secure.

6) Plug the other end of the telephone cord into the wall jack.
7) Plug the AC adapter into a standard 120 VAC wall outlet that is not controlled by a wall switch.

8) Raise the antenna on the base.
INSTALLING THE HANDSET BATTERY PACK

1) Remove the handset battery cover by pressing in on the cover release and sliding it downward.

2) Plug the battery's cable into the handset.

3) Slide the battery cover on until it snaps into place.

Use only the Uniden battery (BT-905) supplied with your phone.
CHARGING THE BATTERY PACK

- **Initial battery charging**

Before plugging the phone line into your new phone for the first time, fully charge the rechargeable battery pack for 15-20 hours without interruption.

1) Place the handset on the base.

2) Make sure that **status** LED lights. If the LED doesn't light, check to see that the AC adapter is plugged in and that the handset makes good contact with the base charging contacts.

- **Low battery indicator**

When the battery pack is very low and needs to be charged, the phone is programmed to eliminate functions in order to save power. The handset beeps. Complete your conversation as quickly as possible and return the handset to the base for charging.

CLEANING THE BATTERY CONTACTS

To maintain a good charge, clean all charging contacts on the handset and base about once a month with a pencil eraser or other contact cleaner. DO NOT use liquids or solvents; you may damage your phone.

**NOTE**

Rechargeable batteries have a “memory effect” that can reduce standby and talk time. To avoid this memory effect, on a monthly basis use the phone until the low battery indicator appears. Then charge the battery for 15-20 hours.
Setting the Pulse/Tone Switch

Be sure the **Pulse/Tone** switch is in the **Tone** position unless your local phone system uses pulse dialing.

Adjusting the Ringer and Volume Controls

**Handset Ringer Tone and Volume**

Your EXI 6960 lets you choose from two ringer tones, Type A and Type B. Each tone has a low and high volume setting. When the phone is in standby mode, press the `vol` or `volt` key on the handset to select the handset ringer tone and volume. As you change the settings, the selection appears on the LCD.

**Handset Earpiece Volume**

The EXI 6960 comes with four volume settings for the handset earpiece - normal, medium, high and loud. The Loud setting is especially useful in places with a lot of background noise, or for the hearing impaired.

*Normal, Medium, High*

During a call, press `vol` ▲ to increase the earpiece volume, press `vol` ▼ to decrease the earpiece volume. As you increase or decrease the volume, your selection appears on the LCD.

When you hang up, the EXI 6960 keeps the last volume setting selected.
**Loud**

During a call, press and hold \texttt{vol ▲} for two seconds. Your selection appears on the LCD.

The EXI 6960 \textit{does not} keep the Loud volume setting when you hang up, but returns to the normal setting to avoid any hearing discomfort for the next person using the phone.

**AUTOMATIC DIGITAL CODE SECURITY**

To prevent other parties from making unauthorized calls on your phone line, a digital code was added to the EXI 6960. Your phone’s handset and base share this code, which is randomly set each time you place the handset in the charging cradle.

To reestablish communication between the handset and the base in the event of a power failure:

1) Restore power to the base.

2) Place the handset in the base and press \texttt{page}.

3) Pick up the handset from the base.

4) Return the handset to the base.

The \texttt{status} LED blinks to indicate that the digital security code is reset.
# Making and Receiving Calls

**Handset On Base**

- **To answer a call**
  
  Pick up the handset (AutoTalk) or press talk.

- **To make a call**
  
  1) Pick up the handset.
  2) Press talk.
  3) Listen for the dial tone.
  4) Dial the number.
  
  **OR**
  
  1) Pick up the handset.
  2) Dial the number, then press talk.

- **To hang up**
  
  Press talk, or return the handset to the base (AutoStandby).

- **To redial**
  
  1) Pick up the handset.
  2) Press talk.
  3) Listen for the dial tone.
  4) Press redial.

**Handset Off Base**

- **To answer a call**
  
  Press any button (Autotalk) or press talk.

- **To make a call**
  
  1) Press talk.
  2) Listen for the dial tone.
  3) Dial the number.
  
  **OR**
  
  1) Dial the number, then press talk.

- **To hang up**
  
  Press talk, or return the handset to the base (AutoStandby).

- **To redial**
  
  1) Press talk.
  2) Listen for the dial tone.
  3) Press redial.

# Flash and Call Waiting

If you have “call waiting” service and a call waiting tone sounds while you are on a call, press flash to accept the waiting call. There is a short pause, then you will hear the new caller. To return to the original caller, press flash again.
1) Remove the handset from the base.

2) Press and hold **mem** for two seconds. The following screen appears.

3) Use the ▲ and ▼ keys or number keypad to choose the memory location where you would like to enter a number.

4) Press **select**. The following screen appears, and a cursor flashes indicating that the display is ready for the name to be entered.

5) Use the ▲ and ▼ keys to scroll through the character menu. Use the ◀ and ► keys to move the cursor to the desired location, and enter the name.

6) If you make a mistake, press **delete** to erase the character you just entered. Or press and hold **delete** to erase the entire line.

7) Press **select**. The following screen appears, and a cursor flashes indicating that the display is ready for the number.

8) Enter the phone number with the handset keypad.

9) Press **select**. The handset beeps and displays a confirmation screen. For example, if you store a name and number into memory location number one, the display shows **Memory 1 Stored**.

10) Press **mem** or return the handset to the charging cradle to exit store mode. Or, wait 20 seconds for the phone to return to standby.

**HINT**

The character menu consists of letters, symbols, and numbers.

**NOTE**

Whenever you are using a menu screen, you must press a key within 20 seconds or the phone will return to standby. You may also press **mem** to exit a memory menu at any time.

**NOTE**

The pause button counts as one digit. Pressing **pause** more than once increases the length of pause between numbers.

**NOTE**

When entering numbers, press **pause** to enter a pause in the dialing sequence. The display shows a P. The pause feature is useful for long distance calling, credit card dialing, or sequences requiring pause between digits.
EDITING A PHONE NUMBER IN MEMORY

Follow these steps to edit a phone number that you have already programmed into memory.

1) Remove the handset from the base.

2) Press and hold mem for two seconds. The display shows the Memory Store screen and any saved numbers.

3) Use the ▲ and ▼ keys or number keypad to select the memory location you would like to edit. The ▲ and ► keys toggle between the names display and the numbers display.

4) Press select. The following screen appears with the memory location number that you have selected in the display.

5) With ► cursor next to Edit Memory, press select. The following screen appears, and a cursor flashes indicating that the display is ready for the name to be edited.

6) Use the ▲ and ▼ keys to scroll through the character menu. Use the ▼ and ► keys to move the cursor to the desired location, and enter the name.

7) Press select. The following screen appears, and a cursor flashes indicating that the display is ready for the number to be edited.

8) Enter the phone number with the number keypad.

NOTE
Whenever you are using a menu screen, you must press a key within 20 seconds or the phone will return to standby. You may also press memory to exit a memory menu at any time.

NOTE
If you select Go Back at any time, no changes are made and the handset shows the Memory Store screen.

NOTE
You may move the ► cursor down to Go Back and press select if you would like to exit this menu.
9) Press **select**. The handset beeps and displays a confirmation screen. For example, if you store a name and number into memory location number one, then the handset shows **Memory 1 Stored**.

10) The display then returns to the Memory Store screen. You may select another number to edit (return to step 3) or you may press **mem** to return to standby.

**ERASING A NUMBER FROM MEMORY**

Use these steps to erase a programmed number from memory. Once a number is erased, that memory location may be programmed with a new number.

1) Remove the handset from the base.

2) Press and hold **mem** for two seconds. The handset shows the Memory Store screen with any saved numbers displayed.

3) Use the ▲ and ▼ keys or number keypad to select the memory location you would like to delete. The ◄ and ► keys toggle between the names display and the numbers display.

4) Press **select**. The following screen appears with the memory location number that you have selected in the display.

5) Use the ▼ key to move the ► cursor down to the **Delete Memory** command.

6) Press **select**. The following confirmation screen appears.

7) Use the ▲ key to move the ► cursor to the **Yes** command.
8) Press `select`. There is a confirmation tone, and the handset displays `Memory 1 Deleted`.

9) The display then returns to the Memory Store screen. You may select another number to delete (return to step 3) or you may press `mem` to return to standby.

**USING MEMORY DIALING**

Follow the steps below to dial a number using a programmed memory location.

1) Press `mem`. The handset displays your programmed memory locations.

2) Use the `▲` and `▼` keys or the number keypad to select the memory location you would like to dial.

3) Press `talk` and the number dials.

**HINT**

Use the `<` and `>` keys to toggle between the names and the numbers displayed in memory.

**NOTE**

If you already know the memory location of the number you wish to dial, press `talk` then `mem` and the memory location. The phone will automatically dial the number.

**CHAIN DIALING**

On certain occasions after dialing a number, you may be requested to enter an access code, such as your account number. You can enter this number into a memory location for later use by doing the following.

1) Store the access code into one of the memory locations (0-9). See “Storing A Phone Number in Memory” (page 15).

2) Dial the party or service main number.
3) When you need to enter the special number, press **mem** followed by the memory location (0-9).

### USING CALLER ID

**You must subscribe to Caller ID from your phone company in order to use this feature.**

#### Setting Up Caller ID Options

There are three Caller ID setup options available; Autotalk, CIDCW, and Area Code.

**Auto Talk** allows you to answer the phone without pressing the **talk** button. If the phone rings when Autotalk is on, simply remove the handset from the cradle and the phone automatically answers the call. If the phone rings when Autotalk is off, you must press **talk** to answer the call. This option is useful to help you screen your calls more effectively.

**CIDCW** (Caller ID on Call Waiting) performs the same as regular Caller ID on a call waiting number. **You must subscribe to CIDCW from your phone company in order to use this feature.**

If you enter your 3-digit area code number in the **Area Code** option, your local area code does not appear in Caller ID messages. When reviewing Caller ID messages, you will see only the local seven digit number. For calls received from outside your local area code, you will see a full 10-digit number.

**NOTE**

If your calling area requires 10-digit dialing, do not program this option.

To change your Caller ID options:

1) Press and hold **call id** for two seconds. The following screen appears.
2) Use the ▲ and ▼ keys to move the cursor to the selection that you would like to change. Press the select key to toggle between On and Off for Autotalk and CIDCW. Press select and use the number keypad to enter or change the area code, then press select again. (You hear a confirmation tone indicating the area code has been changed.)

3) After you have made your selections, press call id and return the handset to the base. The status LED flashes, indicating that your setup changes are now effective.

▼ Screening Your Calls

Caller ID allows you to review caller information before you answer your phone. When the phone rings, the display shows the date, time, call count, name, and phone number of the caller. If your Caller ID service is number only, then the name does not appear on the second line.

If a name or number is not available, the display will show a message such as Incomplete Data, Private Number, Private Name, etc.

▼ Using CIDCW (Caller ID on Call Waiting)

1) During a call when you hear the Caller ID tone, check the handset for the name and number of the incoming caller.

2) Press flash to accept the incoming call. See page 14 for additional information.

▼ Reviewing Caller ID Numbers

Your phone stores the most recent 30 numbers in Caller ID memory. If the memory is full, a new call replaces the oldest number. To review your Caller ID numbers, follow the steps below.
1) Press **call id**, and the Caller ID summary screen appears. The screen shows the number of new callers and the total number of callers stored in Caller ID memory. (This screen appears on the display whenever the handset is face up in the base.)

2) Press **▼** to scan through the list. The most recent call appears first, with the date, time, call count, name, and phone number. Press **▲** to scan back through the list.

3) Once you have reviewed your oldest call, the following screen appears. Press **call id** to return to standby.

**NOTE**

Once you have viewed all of your Caller ID numbers and reached the "End" display, the list does not cycle back to the beginning. You must press **▲** to view your previous calls.

### ▼ Calling a Caller ID Number

1) Press **call id**, and the Caller ID summary screen appears. The screen shows the number of new callers and the total number of callers stored in Caller ID memory.

2) Select the number that you would like to dial. Press **▼** to scan forward and **▲** to scan back through the list.

3) Press **talk** and the number automatically dials.

**HINT**

For long distance dialing, press 1 to add a 1 to the number in the display.
Storing a Caller ID Number Into a Memory Location

1) Press call id, and the Caller ID summary screen appears. The screen shows the number of new callers and the total number of callers stored in Caller ID memory.

2) Press ▼ or ▲ to find the number that you would like to store, then press mem to store the selection.

3) The select location screen appears. Use the ▼ and ▲ keys to select a blank memory location where you would like to store the number. (If you want to replace an existing number with the Caller ID number, skip to step 5.)

4) Press select. A confirmation tone sounds, and the number is programmed. (Do not complete steps 5 and 6.)

5) If you choose to replace an existing number with the Caller ID number, press select, and the following screen appears.

   Replace Memory?
   Yes
   ▲ No

   New : 01
   Total : 02

6) Use the ▼ key to move the cursor to Yes and press select. A confirmation tone sounds, and the number is programmed.

Deleting a Caller ID Number

To delete a single Caller ID message, follow the steps below.

1) Press call id, and the Caller ID summary screen appears. The screen shows the number of new callers and the total number of callers stored in Caller ID memory.

2) Select the number that you would like to delete. Press ▼ to scan forward and ▲ to scan backwards through the list.
3) Press **delete**, and the following screen appears.

4) Press **select** or **delete**. A confirmation tone sounds and the Caller ID screen returns with the next message displayed.

5) After you have deleted all Caller ID number, the display shows **End**. Press **call id** to return to standby.

**Deleting All Caller ID Numbers**

To delete all of your Caller ID numbers, follow the steps below.

1) Press **call id**, and the Caller ID summary screen appears. The screen shows the number of new callers and the total number of callers stored in Caller ID memory.

2) Press **delete**, and the following screen appears.

3) Use the ▲ key to move the cursor to **Yes**, then press **select** or **delete**.

4) A confirmation tone sounds, and the following screen appears.

5) Press **call id** to return to standby.
USING REDIAL

Redial calls the last number dialed. The number redialed can be up to 32 digits long.

USING THE TONE FEATURE

If you are dialing in the pulse mode and need to enter tone digits, press tone to enter the digits. Once the call has ended, the tone mode is canceled and pulse dialing resumes. The tone feature applies only when the base unit is set to pulse.

SELECTING A DIFFERENT CHANNEL

If you encounter interference while using your phone, you can manually change the channel for clearer operation. This function works only when the phone is in use.

The chan button on the handset allows you to choose between 40 channels. During the course of a conversation, if you hear static or noise which makes it difficult to hear, press chan. The following screen appears and the phone changes to a different channel.

TRAVELING OUT-OF-RANGE

During a call, as you begin to move too far from your base unit, noise increases. If you pass the range limits of the base unit, your call will terminate within 20 seconds.
If your phone is not performing to your expectations, please try these simple steps. If you are still unable to resolve the problem, contact your place of purchase or call customer service at (800)297-1023.
