900 MHz Digital Spread Spectrum Technology

Caller ID

Advanced Calling Features

Message Waiting Indicator
Introduction

Congratulations on your purchase of the EXT 1960 cordless telephone. This phone is designed for reliability, long life, and outstanding performance utilizing the latest in 900 MHz Spread Spectrum technology.

Note: Some illustrations in this manual may differ from the actual unit for explanation purposes.

Features

• 900 MHz Spread Spectrum Technology
• Caller ID and Call Waiting Caller ID
• 50 Number Caller ID Memory
• Advanced Calling Features
• Message Waiting Indicator
• 3-Line, 16 Character Backlit Handset Display
• 20 Enhanced Memory Dial Locations
• 32 Digit Redial
• 2nd Battery Capability
• Back-up Power Supply with Optional Battery Pack
• 3 Redial Memories
• Pause
• Pulse / Tone Dialing
• Page / Find
• 7 Day Standby Battery Life
• 4 Hour Talk Time
• Handset Earpiece and Ringer Volume Control
• Hearing Aid Compatible

Digital Spread Spectrum Technology utilizes a “wider frequency band” vs. a “single narrow band” used in standard digital transmissions. The result is a more secure conversation with the clarity of digital sound, extended range, and minimal interference from other cordless phone.

Random Code™ digital security automatically selects one of over 65,000 codes for the handset and base.

These features enhance your phone’s security and also prevent unauthorized calls as a result of your phone being activated by other equipment.

This cordless telephone must be set up before use. Follow these steps:

**Step 1** *(page 3)*
Unpack and check the telephone and accessories.

**Step 2** *(page 4 to 8)*
Next, choose the best location to set up the base unit.

**Step 3** *(page 9 to 10)*
Then, insert the battery pack into the handset. You must to charge the battery pack for more than 17 hours before using the phone.

**About the digital security code**
This cordless telephone uses a digital security code to prevent unauthorized access to your base unit. This security code prevents other cordless handsets from making calls through your base unit.
A random security code will be assigned automatically between your base unit and handset when you charge the battery pack for the first time.
If you want to reset the security code, see page 34.
Checking the package contents

Make sure you have received the following items in the package.

- Base unit
- Handset
- AC adapter (AD-420)
- Rechargeable battery pack (BT-999) (2)
- Telephone line cord (2)
- Wall mount adapter
- This Owner’s Manual
- Precautions and Important Safety Instructions
- Guide to Using Advanced Calling Features
- Beltclip

Uniden Parts Department
(800) 554-3988
Hours: M-F 8:00 AM to 5:00 PM CST.
We can also be reached on the web at www.uniden.com.
Setting up the base unit

Do the following steps.
- Choose the best location
- Connect the base unit
- Choose the dialing mode

Choose the best location
Before choosing a location for your new phone, read the INSTALLATION CONSIDERATIONS included in the PRECAUTIONS AND IMPORTANT SAFETY INSTRUCTIONS brochure. Here are some important guidelines you should consider:

- You should charge your handset for more than 17 hours before attaching to a phone line and using the phone.
- The location should be close to both a phone jack and a continuous power outlet which is not switchable.
- Keep the base and handset away from sources of electrical noise such as motors and fluorescent lighting.
- Be sure there is sufficient space to raise the base antenna fully vertical.
- The base can be placed on a desk, tabletop or mounted on a standard wall plate.
Connect the base unit

If you want to install the base unit on the wall, see page 7.

1 Connect the telephone line cord to the TEL LINE jack and to a telephone outlet.

2 Connect the AC adapter to the DC IN 9V jack and to a standard 120V AC wall outlet.

3 Set the base unit on a desk or tabletop and place the handset on the base unit. Then raise the antenna to a vertical position.

Place the power cord so it does not create a trip hazard, or where it could become chafed and create a fire or electrical hazard.
Use only the supplied AD-420 AC adapter. Do not use any other AC adapter.

**NOTE**

Connect the AC adapter to a continuous power supply.

**NOTE**

Place the base unit close to the AC outlet so that you can unplug the AC adapter easily.

**NOTE**

If your telephone outlet isn't modular, contact your telephone company for assistance.

---

**Choose the dialing mode**

Depending on your dialing system, set the **PULSE-TONE** switch as follows:

<table>
<thead>
<tr>
<th>If your dialing system is</th>
<th>Set the switch to</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tone</td>
<td><strong>TONE</strong></td>
</tr>
<tr>
<td>Pulse</td>
<td><strong>PULSE</strong></td>
</tr>
</tbody>
</table>

**If you aren't sure of your dialing system**

Make a trial call with the **PULSE-TONE** switch set to **TONE**. If the call connects, leave the switch as is; otherwise, set to **PULSE**.
Mounting the base unit on a wall

Standard wall plate mounting
This phone can be mounted on any standard telephone wall plate.

1. Snap the wall mount adapter into the notches on the base.

2. Plug the telephone line cord to the TEL LINE jack and the AC adapter to the DC IN 9V jack.

3. Plug the telephone line cord into the telephone outlet.

4. Wrap the AC adapter cord inside the molded wiring channel. Then wrap the cord around the strain relief notch.

5. Plug the AC adapter into a standard 120V AC wall outlet.

6. Raise the antenna to a vertical position.

7. Align the mounting slots on the base with the mounting posts on the wall. Push in and down until the phone is firmly seated.
Direct wall plate mounting

If you don’t have a standard wall plate, you can mount your phone directly to the wall. Before doing this, consider the following:

• Avoid electrical cables, pipes, or other items behind the mounting location, that could cause a hazard when inserting screws into the wall.
• Try to mount your phone within 10 - 15 feet of a working phone jack to avoid excessive cord lengths.
• Make sure the wall material is capable of supporting the weight of the base and handset.
• Use #10 screws with anchoring devices suitable for the wall material where the base unit will be placed.

1 Insert two mounting screws into the wall, (with their appropriate anchoring device), 3-15/16 inches apart. Allow about 3/16 of an inch between the wall and screwheads for mounting the phone.

2 Refer to steps 1 through 9 on page 8 and 9 to mount the telephone.

8 On the base unit, pull the handset retainer out of the slot. Rotate it clockwise 180 degrees.

9 Flip the retainer from front to back. Slide it back into the slot so that the lip of the retainer is up and the oval is down. The retainer holds the handset in place.
Preparing the battery pack

Charge the battery pack for more than 17 hours before you start using your phone.

1. Press in on the battery cover release and slide the cover down until it comes off.

2. Install the nickel-cadmium battery with the label facing down.

3. Slide the battery cover on until it snaps into place.

4. Place the handset on the base.

5. Make sure that the "status" LED lights. If the LED doesn’t light, check to see that the AC adapter is plugged in and that the handset makes good contact with the base charging contacts.

Use only Uniden Battery (BT-999) supplied with your phone.
Charging optional battery packs

The base unit of your phone is equipped with a compartment for charging an extra battery pack for use in your handset.

1. Pull the cover of battery charger.
2. Put the battery pack in the compartment with contacts facing down.
3. Replace the charger cover.
4. Charge the battery for more than 28 hours.

In the event of a power failure, your spare battery pack can be used as a back-up power supply for the base unit.

Battery use time (per charge)

From fully charged
- Four hours continuous use.
- Seven days when the handset is in the standby mode.

When the battery charge becomes low

When the voltage of battery pack in the handset is very low and needs to be charged, the phone is programmed to eliminate functions in order to save power. If the phone is not in use, “Low Battery” flashes and none of the keys will operate. If the phone is in use, “Low Battery” flashes and the handset beeps. Complete your conversation as quickly as possible and return the handset to the base unit for charging.

Cleaning the battery contacts

To maintain a good charge, it is important to clean the battery contacts on the handset and base unit about once a month. Use a pencil eraser or other contact cleaner. **Do not use any liquids or solvents.**
Making a call

On-hook dialing

1 Enter the phone number. (Up to 32 digits.)
   Example: Enter 8178583300

   ![](8178583300.png)

   ![](Talk_8178583300.png)

Then the volume setting is displayed. For example, if the volume is set to high the display shows:

   ![](Talk_High.png)

3 The number is dialed. After about 5 seconds, the call-time display appears.

4 To hang up, press (talk) or place the handset on the base. The call-time will be displayed for about 5 seconds.

Other Operations

<table>
<thead>
<tr>
<th>To</th>
<th>Do this</th>
</tr>
</thead>
<tbody>
<tr>
<td>To adjust the earpiece volume</td>
<td>Press (↑) or (↓) during the call.</td>
</tr>
<tr>
<td>To temporarily switch to tone dial (When the base is set to pulse mode)</td>
<td>Press (<em>tone</em>). The following numbers dialed will be sent as tone dialing.</td>
</tr>
<tr>
<td>To enter a pause in the dialing sequence</td>
<td>Press (redial/p).</td>
</tr>
</tbody>
</table>
Off-hook dialing

Then the volume setting is displayed. For example, if the volume is set to high the display shows:

![Talk (High)]

The call-time display appears.

2. Dial the phone number.
   **Example:** Enter 8178583300

   ![Talk 0:17 8178583300]

3. To hang up, press (talk) or place the handset in the base. The call-time will be displayed for about 5 seconds.

   ![10:03]
Receiving a call

1. Phone rings.

2. Press \textit{Talk}. “Talk” and volume setting appears on the display.

3. Talk with the caller.

4. To hang up, press \textit{Talk} or place the handset on the base. The call time will be displayed for about 5 seconds.

AutoTalk when ringing

When the AutoTalk setting is on and there is an incoming call, simply lift the handset from the base unit to answer the phone. See “Setting Caller ID options” on page 26 for more details.

Any key answer when ringing

When the AutoTalk setting is on, and the handset is off the base, press any handset key to answer the incoming call.

To cancel a page

To cancel paging, press any of the handset keys while the handset is beeping. (See page 25.)

Call Waiting

Note: You must subscribe to Call Waiting service to use this feature. When a call is received during a telephone call already in progress, press \textit{call waiting} to switch to the new call. If you also subscribe to Call Waiting on Caller ID, you will see the name and number of the caller in call waiting. (See page 33.)
Adjusting the ringer and earpiece volume

Ringer volume
In the standby mode, press ▲ or ▼ on the handset to set the handset ringer volume. There are two ringer volume settings; High and Low.

Ringer on/off switch
This switch turns the handset ringer on or off.

Earpiece volume
Pressing ▲ or ▼ during a telephone call will change the earpiece volume of the handset. This setting will remain in effect after the telephone call has ended.

<High> ▲ <Medium> ▲ <Normal> ▲

When you press ▲ in Loud mode or press ▼ in Normal mode, error sound beeps.
## Redialing a call

The last three phone numbers dialed can be quickly redialed.

### On-hook redialing

1. Press \(\text{redial/p}\). The phone number that was last dialed appears on the display.

2. Press \(\text{redial/p}\) again. Each press of \(\text{redial/p}\) will display one of the last three numbers dialed.

3. Press \(\text{talk}\). “Talk” appears flashing on the display, then the volume setting is displayed.

4. Then the selected number is dialed. After about 5 seconds, the call-time display appears.

5. To hang up, press \(\text{talk}\) or place the handset on the base. The call-time will be displayed for about 5 seconds.

---

**NOTE**

If the recently dialed number exceeds 32 digits, only the first 32 digits are retained for redialing.
Off-hook redialing

1 Press (talk) .
   “Talk” appears flashing on the display.

2 Press (redial/p).
   The last number dialed will be displayed. The only last number dialed can be accessed while off-hook.

3 To hang up, press (talk) or place the handset on the base. The call-time will be displayed for about 5 seconds.

\[\text{Talk} \downarrow \text{Talk}\langle \text{High}\rangle\]

\[\text{NOTE}\]

Only the last number dialed can be accessed after (talk) has been pressed.
In memory dialing operation, you must press a key within 20 seconds or the phone will return to standby. If you return the handset in the cradle, the phone will return to standby, too.

**NOTE**

Memory Dialing allows you to dial a number using just a few key strokes. You can store up to 20 phone numbers in the memory.

1. Press and hold **memory** until “Memory Store” is displayed.

2. Use **▼** and **▲** or enter a two-digit number (01 - 20) to select the memory location where you would like to store the number.

3. Press **select**.
   The following screen appears and a cursor flashes indicating that the display is ready for the name to be entered.

   If this screen appears, the selected memory location is already stored. Then you must either change the entry in this location, clear the location, or select “Go Back” to choose another location.

4. Use **▲**, **▼**, or **del** to enter the name. The name cannot exceed 13 characters.
   - Use **▲** and **▼** to scroll through the character menu. It contains upper and lower case letters and various characters.
   - Use **#/▶** and ***/tone/<** to move the cursor to the desired location.
   - Use **del** to delete characters as needed.
5 Press **select**.
“Store Number” is displayed. The cursor flashes indicating that the display is ready for the number to be entered.

6 Use the number keypad or **redial/p** to enter the phone number.
The phone number cannot exceed 20 digits.
- Use **redial/p** to enter pause in the dialing sequence.
The display shows a “P”.

**NOTE**
The pause feature is useful for long distance calling, credit card dialing, or sequences that require a pause between digits.
- Use **del** to delete digits as needed.

7 Press **select**.
The handset beeps and displays the confirmation screen.
Memory storage is complete.
For example, if you store a name and number into memory location number 07, the display shows “Memory07 Stored”.

After about 2 seconds, “Memory Store” is displayed.

8 Press **memory**), or place the handset on the base to return to standby mode.
Making calls with memory dialing

On-hook memory dialing

1. Press (memory). The handset displays your programmed memory locations.

2. Press (select) and (talk) or enter a two-digit number (01-20) to select the memory location you would like to dial.

3. Press (talk). “Talk” flashes and the volume setting appears on the display. Then the displayed number is dialed.

Display a Programmed Number

Use ( #/tone) and (tone/) to toggle between the names display and the numbers display.

<table>
<thead>
<tr>
<th>Program name</th>
<th>Program number</th>
</tr>
</thead>
<tbody>
<tr>
<td>01 UNIDEN CORP</td>
<td>01 8178583300</td>
</tr>
<tr>
<td>02 JOHN DOE</td>
<td>02 5452930</td>
</tr>
<tr>
<td>03 MOM AND DAD</td>
<td>03 8175551212</td>
</tr>
</tbody>
</table>

When the stored phone number has 14 or more digits, “⇒” is displayed next to the 12th digit. Press ( #/tone) to see the extra digits and (tone/) to return.

NOTE

If you press (select) before (talk), you can confirm the name and number stored in the selected memory location.

To exit the memory function without dialing, press (memory). The handset returns to standby.
Off-hook memory dialing

1. Press $\textit{talk}$.
   "Talk" flashes and the volume setting appears.

2. Press $\textit{memory}$.

3. Enter a two-digit number (01 - 20) to select the memory location of the desired phone number.
   The selected phone number is displayed. Then the number is dialed.
**Editing a stored name and/or phone number**

1. Press and hold the `memory` button until the display shows the memory screen and any saved name/number.

   ![Memory screen example]
   - Memory Store
     - 01 UNIDEN CORP
     - 02 JOHN DOE

2. Press the up (▼) and down (▲) or enter a two-digit number (01 - 20) to select the memory location you would like to edit.

   ![Memory location selection example]
   - Memory Store
     - 01 UNIDEN CORP
     - 02 JOHN DOE

3. Press the `select` button.
   The following screen appears with the memory location number that you have selected in the display.

   ![Select screen example]
   - Edit Memory01
   - Delete Memory01
   - Go Back

4. Press the up (▼) or down (▲) to select “Edit Memory”, then press the `select` button.
   The following screen appears.
   The cursor flashes indicating that the display is ready for the name to be edited. When a name has not been stored, the cursor appears at the beginning of the second line.

   ![Edit name screen example]
   - Store Name
     - UNIDEN CORP

5. Press the up (▼), down (▲), #/▶, #/tone/◀, or the `del` button to edit the name. (See page 17.)
   To edit only the phone number, skip this step.

6. Press the `select` button.
   The following screen appears.
   The cursor flashes indicating that the display is ready for the number to be edited.
7 Use the dial keypad, (redial/p) or (del) to edit the phone number.
The phone number cannot exceed 20 digits. (See page 18.)
When the phone number will not be edited, skip this step.

8 Press (select).
The handset beeps and displays the confirmation screen. The memory storage is complete.
For example, if you store a name and number into memory location number 01, the display shows "Memory 01 stored”.

After about 2 seconds, "Memory Store" is displayed.

9 Press (memory) or place the handset on the base to return to standby mode.

Display a Programmed Number
Use (#/▶) and (*/tone/◀) to toggle between the names display and the numbers display.

<table>
<thead>
<tr>
<th>Program name</th>
<th>Program number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Memory Store</td>
<td>Memory Store</td>
</tr>
<tr>
<td>01 UNIDEN CORP</td>
<td>01 8178583300</td>
</tr>
<tr>
<td>02 JOHN DOE</td>
<td>02 5452930</td>
</tr>
<tr>
<td>Memory Store</td>
<td>Memory Store</td>
</tr>
<tr>
<td>06 JOHN DOE</td>
<td>06 011813554329</td>
</tr>
</tbody>
</table>

• When the stored phone number has 14 or more digits, “▶” is displayed next to the 12th digit.
Press (#/▶) to see the extra digits and (*/tone/◀) to return.
Erasing a stored name and phone number

1. Press and hold \textit{(memory)} until the display shows the memory screen and any saved name/number.

   \begin{center}
   \begin{tabular}{|c|c|}
   \hline
   Memory Store & 01 UNIDEN CORP  \\
   & 02 JOHN DOE  \\
   \hline
   \end{tabular}
   \end{center}

2. Press \( \text{\textdagger} \) and \( \text{\textasciitilde} \) or enter a two-digit number (01 - 20) to select the memory location you would like to edit.

   \begin{center}
   \begin{tabular}{|c|c|}
   \hline
   Memory Store & 01 UNIDEN CORP  \\
   & 02 JOHN DOE  \\
   \hline
   \end{tabular}
   \end{center}

3. Press \textit{(select)}.
The following screen appears with the memory location number that you have selected in the display.

   \begin{center}
   \begin{tabular}{|c|c|}
   \hline
   edit Memory02 & Delete Memory02  \\
   & Go Back  \\
   \hline
   \end{tabular}
   \end{center}

4. Press \( \text{\textdagger} \) to move the cursor down to \textquote{Delete Memory} command line.

5. Press \textit{(select)}.
The following confirmation screen appears.

   \begin{center}
   \begin{tabular}{|c|c|}
   \hline
   delete Memory02? & Yes  \\
   & No  \\
   \hline
   \end{tabular}
   \end{center}

6. Press \( \text{\textasciitilde} \) to move the cursor to \textquote{Yes}.

7. Press \textit{(select)} or \textit{(del)}.
There is a confirmation tone and the entry is deleted. The following screen appears.

   Memory02 Deleted

8. After a few seconds the display returns to the \textquote{Memory Store} screen.
You may select another number to delete (return to step 4) or press \textit{(memory)} to return to standby.
Advanced Calling Features

You can access a list of calling services provided by your local telephone company by pressing the (menu) key on the handset. You may be required to subscribe to these services before they can be used. Please contact your local telephone company for more details, or to subscribe.

For more information, please refer to the "Guide to Using Advanced Calling Features" included in this package.

Message Waiting Indicator

The messages LED indicator on the base is designed to work with voice mail service provided by your local telephone company. The LED will flash to indicate when you have received new voice messages. You must subscribe to voice mail service before this feature will operate. Please contact your local telephone company for more details, or to subscribe.

You may need to occasionally reset the indicator if it remains on after you have retrieved your messages. To reset the indicator, press and hold the (page/find) key for five seconds, or until the LED stops flashing.

For more information, please refer to the "Guide to Using Advanced Calling Features" included in this package.
**Paging**

**To locate the handset**

1. Press *(page/find)* on the base.
2. The handset beeps for 60 seconds. The following screen appears;

![Paging Screen]

3. Press any key on the handset to end.

When an incoming call is received during paging, paging is stopped and the telephone is switched to the incoming call.

If you press *(talk)* during paging, the handset will be placed in off-hook (talk) mode.

Paging cannot be performed while the handset is in use.
**Caller ID**

You must subscribe to the Caller ID service to use this feature.

When the telephone rings, the Caller ID feature allows you to view the caller's name and phone number on the display before you answer the phone.

The handset displays the phone number of the incoming call, the name, time, and the number of calls. Additionally, you can dial the displayed number, and store the information for memory dialing.

### Setting Caller ID options

There are three Caller ID setup options available; they are AutoTalk, CIDCW (Caller ID on Call Waiting), and Area Code.

**AutoTalk** allows you to answer the phone without pressing the talk button. If the phone rings when AutoTalk is on, simply remove the handset from the cradle and the phone automatically answers the call. If the phone rings when AutoTalk is off, you must press talk to answer the call.

**Caller ID on Call Waiting (CIDCW)** performs the same as regular Caller ID on a call waiting number. You must subscribe to CIDCW from your phone company in order to use this feature.

The **Area Code** setting is used for dialing and storing numbers directly from the Caller ID display. You may wish to enter your local area code before you use this phone for the first time, or if you move to a new area, the phone can then distinguish local or long distance calls to properly dial directly from the caller ID record.

If your calling area requires 10-digit dialing, skip this step.

To change your Caller ID options:

1. Press and hold call id. The following screen appears.

2. Use and to move the cursor to the selection that you would like to change. Press select to toggle between On and Off for Auto Talk and CIDCW.

3. When you wish to enter Area Code, press to move the cursor to select "Area Code". Then press select and enter the 3 digits area code by using the number keypad - . After entering Area Code, press select .

4. After you have made your selections, press call id and return the handset to the charging cradle.
When the telephone rings

1. When the Caller ID message is received, the display shows the caller’s phone number, along with the date and time. The incoming call information is stored in Caller ID record. If the Caller ID service includes the caller’s name, the caller’s name appears on the display (up to 15 letters).

<table>
<thead>
<tr>
<th>The date and time received</th>
<th>Caller’s name</th>
<th>Callers phone number</th>
</tr>
</thead>
<tbody>
<tr>
<td>5/11 12:30PM 01</td>
<td>UNIDEN CORP</td>
<td>817-858-3300</td>
</tr>
</tbody>
</table>

   Here are some typical displays;

   - When the phone number and name data are received
     | 5/11 12:30PM 01           | Private Name  | 817-858-3300        |
   - When a private name is received
     | 5/11 12:30PM 01           | Unknown Name  | 817-858-3300        |
   - When an unknown name is received
     | 5/11 12:30PM 01           | Incomplete Data |

2. When you pick up the phone, the display changes to “Talk”. (See page 14.)

Data errors appear as “2”. 

NOTE: When you answer a call before the Caller ID message is received (Example: before the second ring), the Caller ID message will not appear.

NOTE: When the call is received via a telephone company that does not offer Caller ID service, the caller’s phone number and name do not appear. (This includes international calls.)

NOTE: When the call is via a private branch exchange (PBX), the caller’s phone number and name may not appear.
Viewing the Caller ID Message list

The Caller ID list stores information for up to 50 incoming calls - even unanswered calls.

1. Press (call id). The summary screen appears. The screen shows the number of new messages and total messages.

2. Press (▼) to display the latest caller ID message.

3. Press (▼) to see the next message. Or press (▲) to see previous message.

4. Press (call id) to return to standby.

Long Distance call settings and cancellation

Press (1) while the incoming call information is displayed (in step 2) to return a long distance call. The prefix “1-” will be displayed at the beginning of the phone number when a long distance call is set. (When the phone number is 15 digits long, only “1” is displayed.) Pressing (1) again will cancel the long distance call setting.
Deleting information from the Caller ID list

The EXT 1960 stores up to 50 messages. If the phone receives the 51st message, the oldest one in the list is automatically deleted. Caller ID data can also be deleted manually.

Deleting a Caller ID message

1. Press \textit{call id}. Display the message to be deleted from the Caller ID list by pressing \texttt{\uparrow} or \texttt{\downarrow}.

2. Press \texttt{del}. Delete Message ?
   \begin{tabular}{|c|c|}
   \hline
   \texttt{Yes} & \texttt{No} \\
   \hline
   \end{tabular}

3. Press \texttt{\uparrow} or \texttt{\downarrow} to select “\texttt{Yes}” or “\texttt{No}”.

4. Press \texttt{select} or \texttt{del}.

\textbf{When the pointer is at “\texttt{Yes}”:} A beep tone sounds and the next Caller ID message is displayed.

\textbf{When the pointer is at “\texttt{No}”:} The display returns to the Caller ID display.

\textbf{NOTE}

If you get an incoming call, the deleting operation is cancelled.
Deleting all Caller ID name/numbers

1. Press «call id».  
   New : 01
   Total: 02

2. Press «del».  
   Delete All ?
   Yes
   ▲No

3. Press ▲ or ▼ to select "Yes" or "No".

4. Press «select» or «del».

   When the pointer is at "Yes":
   A beep tone sounds and all stored Caller ID messages are deleted.
   Total: 00

   When the pointer is at "No":
   The display returns to the summary screen.
   New : 01
   Total: 02

NOTE
If you get an incoming call, the deleting operation is cancelled.

If you get an incoming call, the deleting operation is cancelled.
Using the Caller ID list

Calling a party from the Caller ID list
You can place a call from the Caller ID list. The EXT 1960 stores up to 50 messages.

1. Press \textit{call id}. Select the phone number that you want to dial by pressing \textit{▼} or \textit{▲}.

   \begin{center}
   \includegraphics[width=0.5\textwidth]{call_id}
   \end{center}

   \textbf{NOTE}
   When a long distance call has been set, “1” appears in the display.

2. Press \textit{talk}.

   \begin{center}
   \includegraphics[width=0.5\textwidth]{talk}
   \end{center}

   The displayed phone number dials automatically.

Long Distance calls
Pressing \textit{▼} while the incoming call information is displayed (in step 1) will set or cancel a long distance call.

Dial edit
You can edit the phone number of Caller ID data when you press \textit{select} after the step 1.
Storing Caller ID messages in Memory dialing

Messages shown in the Caller ID list can be stored in memory dialing. Using the incoming call information (i.e., Caller ID list), the phone number of the party on the Caller ID list can be stored in memory dialing.

1. Press \textit{call id}. Select the phone number to be stored from the Caller ID list by pressing \( \text{\textasciitilde} \) or \( \text{\textasciitilde} \).

2. Press \textit{memory}, and select \textit{memory location}. Or press the dial button (\( \text{\textasciitilde} \) to \( \text{\textasciitilde} \)) and select the number (01 - 20).

3. Press \( \text{\textasciitilde} \) or \( \text{\textasciitilde} \) to select the memory location. Or press the dial button (\( \text{\textasciitilde} \) to \( \text{\textasciitilde} \)) and select the number (01 - 20).

4. Press \textit{select}, and a beep tone will sound. The number is stored in memory, and the display returns to the Caller ID list.

\begin{center}
\begin{tabular}{|c|c|}
\hline
5/17 12:30PM 03  & UNIDEN CORP  \\
817-858-3300     & \hline
\end{tabular}
\end{center}

If a message has already been stored in the selected memory numbers location, a confirmation screen is displayed. Press \( \text{\textasciitilde} \) to select “\textit{Yes}”. Press \textit{select} to overwrite. The display returns to the Caller ID list.

\begin{center}
\begin{tabular}{|c|c|}
\hline
Replace Memory  & \textit{No}  \\
\textit{Yes}      & \hline
\end{tabular}
\end{center}

817-858-3300     & \hline
\end{tabular}
\end{center}
Using Caller ID on Call Waiting service

“Caller ID” and “Call waiting” are separate services. CIDCW (Caller ID on Call Waiting) performs the same as regular Caller ID on a call waiting number. You must subscribe to the “Caller ID on call waiting (CIDCW) services” before you can use the following features. The “Call waiting” service can also be used independently. Please contact your telephone company for details.

1 When a new incoming call arrives during your current telephone call, the phone number and the name of the new caller is displayed.

```
Talk 10:30
UNIDEN CORP
817-858-3300
```

2 Press \textit{call waiting}. You will be able to talk with the second caller. The first caller will be put on hold.

3 To return to the first caller, press \textit{call waiting} again.
Changing the digital security code

The digital security code is an identification code used to connect the handset and the base unit. Normally, setting the code is not necessary.

The first time you charge your handset, the security code is automatically set. (See page 2.)

In the rare situation that you suspect another cordless telephone is using the same security code, you can change the code.

1. Remove the handset from the base unit. Press \textit{page/find}.

2. While the handset is producing the paging sound, hold \textit{page/find} and replace the handset on the base unit. The paging tone stops. Leave the handset on the base longer than 5 seconds. A random, new security code is set.
Installing the beltclip

To attach the beltclip
Insert the beltclip into the holes on each side of the handset. Press down until it clicks.

To remove the beltclip
Pull both sides of the beltclip to release the tabs from the holes.

Headset installation
Your phone may be used with an optional headset. To use this feature, simply plug any standard 2.5mm headset plug into the headset jack. Your phone is ready for hands-free conversation.
Battery replacement and handling

When the operating time becomes short, even after a battery is recharged, please replace the battery. With normal usage, your battery should last about one year. Please contact your place of purchase for a replacement battery.

Power Failure
During the period that the power is off, you will not be able to make or receive calls with the telephone.

Caution
- Use the specified battery pack.
- Do not remove the battery from the handset to charge it.
- Never throw the battery into a fire, disassemble it, or heat it.
- Do not remove or damage the battery casing.

Maintenance

When slightly dirty
Wipe with a soft, dry cloth.

When very dirty
Wipe with a soft cloth that has been dampened with diluted, neutral detergent. Dry with a dry cloth.

When the charging terminals become dirty
Wipe with a pencil eraser or other contact cleaner.

Caution
Do not use paint thinner, benzene, alcohol, or other chemical products. Doing so may discolor the surface of the telephone and damage the finish.
If your phone is not performing to your expectations, please try these simple steps first.

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Suggestion</th>
</tr>
</thead>
<tbody>
<tr>
<td>The status LED won't come on when the handset is placed in the base unit.</td>
<td>• Make sure the AC adapter is plugged into the base unit and wall outlet. • Make sure the handset is properly seated in the base unit. • Make sure the charging contacts on the handset and base unit are clean.</td>
</tr>
<tr>
<td>The audio sounds weak and/or scratchy.</td>
<td>• Make sure that the base unit antenna is in a vertical position. • Move the handset and or base unit to a different location away from metal objects or appliances and try again. • Make sure that you are not too far from the base.</td>
</tr>
<tr>
<td>Can't make or receive calls.</td>
<td>• Check both ends of the base unit telephone line cord. • Make sure the AC adapter is plugged into the base unit and wall outlet. • Disconnect the AC adapter for a few minutes, then reconnect it. • Reset the digital security code (See page 34). • Make sure <code>talk</code> is pressed.</td>
</tr>
<tr>
<td>The handset doesn't ring or receive a page.</td>
<td>• The battery pack may be weak. Charge the battery on the base unit for more than 17 hours. • The handset may be too far away from the base unit. • Place the base unit away from appliances or metal objects. • Reset the digital security code (See page 34). • Turn on the ringer switch (See page 14).</td>
</tr>
<tr>
<td>The Caller ID does not display.</td>
<td>• The handset was picked up before the second ring. • The call was placed through a switch board. • Call your local telephone company to verify your Caller ID service is current.</td>
</tr>
</tbody>

Specifications

General
The EXT 1960 complies with FCC Parts 15 and 68.
Frequency control: PLL
Modulation: Direct Sequence Spread Spectrum; DBPSK
Operating temperature: 0°C to +50°C (+32°F to +122°F)

Base unit
Frequency: 904.2 MHz to 925.8 MHz (20 channel)
Power requirements: 9V 350mA (from AC adapter)
Size: 5-5/32 in. (W) x 2-1/2 in. (D) x 8-57/64 in. (H)
(131 mm (W) x 63.6 mm (D) x 226 mm (H))
Weight: Approx. 15.7 oz. (445 g)
(including optional battery)

Handset
Frequency: 904.2 MHz to 925.8 MHz (20 channel)
Power requirements: Rechargeable Nickel-Cadmium battery pack
Size (without antenna): 2-17/64 in. (W) x 2-1/32 in. (D) x 7-1/64 in. (H)
(57.6 mm (W) x 51.7 mm (D) x 178 mm (H))
Weight: Approx. 9.4 oz. (267 g) (including battery)
Battery: BT-999
Capacity 600 mAh, 3.6V
Talk mode 4 hours TYP
Standby mode 7 days TYP
