PRECAUTIONS

Before you use this scanner, please read and observe the following.

IMPORTANT

This scanning radio has been manufactured so that it will not tune to the radio frequencies assigned by the FCC for cellular telephone usage. The Electronic Communications Privacy Act of 1986, as amended, makes it a federal crime to intentionally intercept cellular or cordless telephone transmissions or to market this radio when altered to receive them. The installation, possession, or use of this scanning radio in a motor vehicle may be prohibited, regulated, or require a permit in certain states, cities, and/or local jurisdictions. Your local law enforcement officials should be able to provide you with information regarding the laws in your community.

Changes or modifications to this product not expressly approved by Uniden, or operation of this product in any way other than as detailed by this Operating Guide, could void your authority to operate this product.

EARPHONE WARNING!

Be sure to use only a monaural earphone with this scanner. You can also use an optional stereo headset. Use of an incorrect earphone or mono headset might be potentially hazardous to your hearing. The output of the phone jack is monaural, but you will hear it in both headphones of a stereo headset.
Set the volume to a comfortable audio level coming from the speaker before plugging in the monaural earphone or headset. Otherwise, you might experience some discomfort or possible hearing damage if the volume suddenly becomes too loud because of the volume control or squelch control setting. This might be particularly true of the type of earphone that is placed in the ear canal.

THE FCC WANTS YOU TO KNOW

WARNING! *Uniden does not represent this unit to be waterproof. To reduce the risk of fire or electrical shock, do not expose this unit to rain or moisture.*

Uniden® and Close Call® are registered trademarks of Uniden America Corporation. Other trademarks used throughout this manual are the property of their respective holders.

This scanner has been tested and found to comply with the limits for a scanning receiver, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This scanner generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this scanner does cause harmful interference to radio or television reception, which can be determined by turning the scanner on and off, you are encouraged to try to correct the interference by one or more of the following methods:

- Reorient or relocate the receiving antenna
- Increase the separation between the scanner and the receiver

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: 1) This device may not cause harmful interference, and 2) this device must
accept any interference received, including interference that may cause undesired operation.

SCANNING LEGALLY

Your scanner covers frequencies used by many different groups, including police and fire departments, ambulance services, government agencies, private companies, amateur radio services, military operations, pager services, and wireline (telephone and telegraph) service providers. It is legal to listen to almost every transmission your scanner can receive. However, there are some transmissions that you should never intentionally listen to. These include:

- Telephone conversations (cellular, cordless, or other private means of telephone signal transmission)
- Pager transmissions
- Any scrambled or encrypted transmissions

According to the Electronic Communications Privacy Act (ECPA), you are subject to fines and possible imprisonment for intentionally listening to, using, or divulging the contents of such a conversation unless you have the consent of a party to the conversation (unless such activity is otherwise illegal). This scanner has been designed to prevent the reception of cellular telephone transmissions and the decoding of scrambled transmissions. This is done to comply with the legal requirement that scanners be manufactured so they are not easy to modify to pick up these transmissions. Do not open your scanner’s case to make any modifications that could allow it to pick up transmissions that are illegal to monitor. Modifying or tampering with your scanner’s internal
components or using it in a way other than as described in this manual could invalidate your warranty and void your FCC authorization to operate it.

In some areas, mobile use of this scanner is unlawful or requires a permit. Check the laws in your area. It is also illegal in many areas (and a bad idea everywhere) to interfere with the duties of public safety officials by traveling to the scene of an incident without authorization.
INTRODUCTION

Thank you for purchasing a Uniden SR30C handheld scanner. The scanner is versatile, compact, and easy to use. In addition to its standard scanning features, your scanner also includes Close Call® RF capture technology designed to help you detect and identify strong local radio signals in your area.

You can program up to 500 frequencies into the scanner’s memory. The scanner lets you scan transmissions and is preprogrammed with service bands for your convenience. You can quickly search those frequencies most commonly used by police and other agencies without tedious and complicated programming. The scanner gives you direct access to over 32,000 exciting frequencies.

Use your scanner to monitor:

• Police and fire departments (including rescue and paramedics)
• NOAA weather transmissions
• Business/Industrial radio
• Utilities
• Marine and amateur (ham radio) bands
• Aircraft band

SR30C FEATURE HIGHLIGHTS

Close Call® RF Capture Technology - you can set the scanner so it detects and provides information about nearby radio transmissions. See page 42 for more information on the Close Call RF feature.
**PC Programming** - lets you program your scanner using your PC.

**Custom Search** - lets you program up to 10 custom search ranges and search any or all of those ranges.

**Quick Search** - allows you to enter a frequency and start searching up or down from that frequency.

**Turbo Search** - increases the search speed from 100 to 300 steps per second automatically for bands with 5 kHz steps.

**Search Lockout** - allows you to lock out up to 200 search frequencies (100 temporary and 100 permanent) in *Custom, Service, Close Call*, or *Quick Search* modes.

**Lock-Out Function** - lets you set your scanner to skip over specified channels or frequencies when scanning or searching. You must manually unlock these channels.

**Temporary Lock-Out Function** - lets you set your scanner to skip over specified channels or frequencies when scanning or searching. This temporary lock-out releases when you manually unlock the channels or frequencies or when you power down the scanner.

**Priority Channels** - You can program one channel in each bank as a priority channel (10 priority channels total). The scanner checks that channel every 2 seconds while it scans the bank so you do not miss transmissions on those channels. (Default=Priority Off)

**Priority Scan** - lets you set the Priority feature to check each channel every 2 seconds regardless of whether or not the scanner is receiving transmissions.
Priority Scan with Do Not Disturb - lets you set the Priority feature to check each channel every 2 seconds as long as the scanner is not receiving transmissions.

Duplicate Channel Alert - lets you know when you have entered a frequency that is already registered on another channel.

Channel Storage Banks - the scanner has 10 banks. You can store up to 50 frequencies into each bank (for a total of 500 frequencies), so you can more easily identify calls.

Two-Second Scan Delay - delays scanning for about 2 seconds before moving to another channel so you can hear more replies that are made on the same channel.

Do Not Disturb prevents the scanner from interrupting transmissions during receiving.

Ten Service Bands - frequencies are preset in separate Weather, Police, Fire/Emergency, Marine, Racing, Civil Air, HAM Radio, Railroad, CB Radio, and Other (Other = FRS/GMRS/MURS) bands to make it easy to locate specific types of calls.

Key Lock - lets you lock the scanner’s keys to help prevent accidental changes to the scanner’s programming.

Direct Access - lets you directly access any channel.

Two Level Display Backlight - Two brightness levels make the scanner easy to read in low-light situations.

Flexible Antenna with BNC Connector - provides adequate reception in strong signal areas and is designed to help prevent antenna breakage. You can also connect an external antenna for better reception.
Memory Backup - keeps the frequencies stored in memory for an extended time if the scanner loses power.

Three Power Options - Use the supplied USB cable to charge the SR30C through your computer or other USB charging port. You can also power the scanner using two AA rechargeable Ni-MH batteries (not included) or optional alkaline batteries.

Key Confirmation Tones - the scanner sounds a tone when you perform an operation correctly, and an error tone if you make an error.

Battery Low Alert - warns you when battery power gets low. The Battery Low icon flashes ( ) and a battery low tone sounds every 15 seconds until the scanner is recharged, turned off, or drained completely.

Battery Save - works when there is no transmission for 1 minute in Scan Hold mode and in any Search Hold mode (does not work in Priority Scan and Close Call Scan modes). This feature turns off RF power for 1 second and turns it on in 300ms intervals to extend the battery live.

Scan/Search Delay/Resume - controls whether the scanner pauses at the end of the transmission to wait for a reply. You can set the Delay time for each Channel, Close Call Search, Custom Search, and Service Search mode.

FREQUENCY RANGE

These tables list the frequency ranges, default frequency step, default mode (AM or NFM), and type of transmissions you can hear for each range for USA or Canadian bands.
Select the band plan (USA or Canada) when you turn on the scanner (default = USA). Press and hold the key for 2-3 seconds to turn on the scanner while pressing and holding 1 for USA or 2 for Canada. The band plan will remain until you change it again.

**USA BAND PLAN**

SCANNING BASICS

This section provides a background on how scanning works. You don’t really need to know all of this to use your scanner, but some background knowledge will help you get the most from your SR30C.

WHAT IS SCANNING?

Unlike standard AM or FM radio stations, most two-way communications do not transmit continuously. Your SR30C scans programmed channels until it finds an active frequency, then stops on that frequency and remains on that channel as long as the transmission continues. When the transmission ends, the scanning cycle resumes until it receives another transmission on a programmed channel.

WHAT IS SEARCHING?

The SR30C searches for active frequencies. This is different from scanning because you are searching for frequencies that have not been programmed into the scanner. When you select frequency bands to search, the scanner searches for any active frequency within the lower and upper limits you specify for that band. When the scanner finds an active frequency, it stops on that frequency as long as the transmission lasts. If you think the frequency is interesting, you can program it into one of the bands. If not, you can continue to search.
**Conventional Scanning**

Conventional scanning is a relatively simple concept. Each group of users in a conventional system is assigned a single frequency (for simplex systems) or two frequencies (for repeater systems). Any time one of them transmits, their transmission always goes out on the same frequency. Up until the late 1980’s this was the primary way that radio systems operated.

Even today, there are many 2-way radio users who operate using a conventional system:

- Aircraft
- Amateur radio
- FRS/GMRS users
- Broadcast AM/FM/TV stations
- Many business radio users

When you want to store a conventional system, all you need to know are the frequencies they operate on. When you are scanning a conventional system, the scanner stops very briefly on each channel to see if there is activity. If there isn’t, the scanner quickly moves to the next channel. If there is, then the scanner pauses on the transmission until it is over.

**Simplex Operation**

Simplex systems use a single frequency for both transmit and receive. Most radios using this type of operation are limited to line-of-sight operation. This type of radio is frequently used at construction job sites and with inexpensive consumer radios such as GMRS/FRS radios. The range is typically 1-8 miles, depending upon the terrain and many other factors.

**Repeater Operation**

Repeater systems use two frequencies: one transmits from the radio to a central repeater; the other transmits from the repeater to other radios in the system. With a repeater-based system, the repeater is located on top of a tall building or on a radio tower that provides great visibility to the area of operation. When a user transmits (on an input frequency), the signal is picked up by the repeater and retransmitted (on an output frequency). The user’s radios always listen for activity on the output frequency and transmit on the input frequency. Since the repeater is located very high, there is a very large line of sight. Typical repeater systems provide coverage out to about a 25-mile radius from the repeater location.

**WHAT ARE BANKS?**

**Channel Storage Banks**

To make it easier to identify and select the channels you want to listen to, the 500 channels are divided into 10 channel storage banks containing 50 channels each. You could use each channel storage bank to group frequencies by department, location, area of interest, or any other way you prefer. You can listen to any or all of the banks by using the number keys to turn them on or off.

**Service Search Bands**

The scanner is preprogrammed with many of the frequencies allocated to Weather, Police, Fire/Emergency, Marine, Racing, Civil Air, HAM Radio, Railroad, CB radio, and Other (Other = FRS/GMRS/MURS). Use the 10 bands allocated for
these service searches just like the channel storage banks, searching the frequencies using *Service Search* mode (see page 37).

**Custom Search Ranges**

*Custom Search* mode lets you program the upper and lower limits of search ranges. You can then search these 10 custom search ranges starting from the lowest frequency to the highest frequency in the search range you entered. You can turn off ranges you don’t want to search just like turning off (disabling) channel storage banks in *Scan* mode.

Custom search ranges use the same LCD numbers on the display as the 10 channel storage banks (see page 32).

**WHERE TO LEARN MORE**

By itself, this manual really only provides part of what you need to know to have fun scanning – how to program and use the scanner. The website, [http://www.radioreference.com](http://www.radioreference.com), is the Internet’s premier source for user-supported radio system information. You can find lists of frequencies for your area there. This web sites is not affiliated with Uniden Corporation.

For more information about Uniden and our other products, visit [http://www.uniden.com](http://www.uniden.com).
SETUP

WHAT’S IN THE BOX?

SR30C Scanner  Antenna  Belt Clip (attached)

Not shown:
- USB cable
- Strap
- Owner’s Manual

If any of these items are missing or damaged, immediately contact your place of purchase or visit our website at http://www.uniden.com.
SETTING UP THE SCANNER

Connect the Antenna

1. Align the slots around the antenna’s connector with the tabs on the scanner’s BNC connector.
2. Slide the antenna’s connector down over the scanner’s connector.
3. Rotate the antenna connector’s outer ring clockwise until it locks into place.

The scanner’s BNC connector makes it easy to connect a variety of optional antennas, including an external mobile antenna or outdoor base station antenna.

Note: Always use 50-ohm, RG-58, or RG-8, coaxial cable to connect an outdoor antenna. If the antenna is over 50 feet from the scanner, use RG-8 low-loss dielectric coaxial cable. If it is less than 50 feet, use RG-58. You can get a BNC adapter at local electronics stores.
**Connect an Optional Earphone/Headphone**

For private listening, you can plug a 1/8-inch (3.5 mm) mini-plug earphone or stereo headphones (not supplied) into the headphone jack on top of your scanner. This automatically disconnects the internal speaker.

**Connecting an Optional Extension Speaker**

In a noisy area, an optional extension speaker, positioned in the right place, might provide more comfortable listening. Plug the speaker cable’s 1/8-inch (3.5-mm) mini-plug into your scanner’s jack. If your speaker’s cable ends in a mono plug, use a mono-to-stereo adapter to prevent shorting the audio amplifier and reducing volume.

**WARNING! If you connect an external speaker to the scanner’s headphone jack, never connect the audio output line to a power supply and ground. This might damage the scanner.**

**Adjusting the Belt Clip**

The factory-attached belt clip makes it easier to carry the scanner. Use a Phillips screwdriver to adjust (loosen) the mounting screws or remove the belt clip completely.

**POWERING THE SCANNER**

Use the provided USB cable to connect your scanner to your computer to charge the Ni-MH batteries (not included) on initial installation and to recharge them. You can also use a power adapter that provides USB charge power (not included, but available at many retailers). You can also use alkaline (ALK) non-rechargeable batteries (not included).
Inside the battery compartment is a switch; set the unit to either **ALK** or **Ni-MH** to match the type of battery you’re using.

**WARNING!** *Non-rechargeable batteries can get hot or burst if you try to charge them.*

**CAUTIONS:**

- When **BATT** flashes in the display and the scanner beeps every 15 seconds, recharge or replace the batteries.
- Use only fresh batteries of the required size and recommended type.
- Always remove old or weak batteries. Batteries can leak chemicals that destroy electronic circuits.
- Do not mix old and new batteries, different types of batteries (standard, alkaline, or rechargeable), or rechargeable batteries of different capacities.

**Installing Non-Rechargeable Batteries**

1. Make sure the power is turned off.
2. Slide the battery compartment cover off.
3. Use a pointed object such as a ballpoint pen to set the battery selection switch inside the compartment to **ALK**.
4. Insert the batteries as indicated by the polarity symbols (+ and -) marked inside the battery compartment.
5. Replace the battery compartment cover.

**Installing Rechargeable 2300mAh Ni-MH Batteries**

You can also use two Ni-MH rechargeable batteries to power your scanner.
1. Make sure the power is turned off.
2. Slide the battery compartment cover off.
3. Use a pointed object such as a ballpoint pen to set the battery selection switch inside the compartment to **Ni-MH**.
4. Install two batteries in the compartment as indicated by the polarity symbols (+ and -) marked inside the battery compartment.
5. Replace the battery compartment cover.

**Note:** To prevent damage to Ni-MH batteries, never charge them in an area where the temperature is above 113°F (45°C) or below 40°F (4°C).

**Charging the Ni-MH Batteries through USB Connection**

The scanner has a built-in circuit to charge the Ni-MH batteries when a USB cable connects it to a computer (NOT to a USB hub) or to an AC or DC adapter that provides USB charging power. Verify that the battery selection switch is set to **Ni-MH** and that only Ni-MH rechargeable batteries are inserted in the scanner before connecting it to your computer.

**CAUTION:** Never attempt to charge non-rechargeable batteries or install non-rechargeable batteries when the battery selection switch is set to Ni-MH.

1. Be sure the scanner is turned off. It will recharge only if it is turned off, even with the USB cable connecting it to a computer.
2. Connect the included USB cable to the scanner’s USB port.
3. Connect the other end of the USB cable to the computer’s USB port or to an AC or DC adapter that provides USB charging power.

**Note:** If you connect to a computer’s USB port, the PC will prompt you for the drivers for your scanner. To download and install these drivers, go to http://info.uniden.com/UnidenMan4/SR30C.

4. The scanner displays **CHArg** and the low battery icon while it charges the batteries. The screen goes blank after the scanner is completely charged.

Different status messages may display, depending on the battery type and scanner status:

<table>
<thead>
<tr>
<th>LCD Message</th>
<th>Batt. Type</th>
<th>Meaning</th>
<th>Scanner Cond.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>CHArg</strong></td>
<td>Ni-MH</td>
<td>Scanner is charging.</td>
<td>Off</td>
</tr>
<tr>
<td>None</td>
<td>Ni-MH</td>
<td>Unit is charged.</td>
<td>Off</td>
</tr>
<tr>
<td>None</td>
<td>Ni-MH</td>
<td>Scanner is not charging (Battery selection switch is set to Alk.)</td>
<td>Off</td>
</tr>
<tr>
<td><strong>Err CHArg</strong></td>
<td>Ni-MH</td>
<td>Batteries cannot be charged (dead battery).</td>
<td>Off</td>
</tr>
<tr>
<td><strong>ILEgAL</strong></td>
<td>Ni-MH</td>
<td>USB external power is out of range.</td>
<td>Off</td>
</tr>
</tbody>
</table>

If the batteries are good, the scanner charges the batteries and it operates normally. If the scanner cannot immediately
determine if the batteries are good and can be charged, it checks them and displays the battery icon. If the scanner judges the batteries are good, the scanner starts charging and the battery icon disappears. If it cannot regard the batteries as good in 60 seconds, the scanner stops checking and the battery icon blinks.

**Low Battery Alert**
The Low Battery Alert tone sounds every 15 seconds and the battery icon flashes when the battery voltage is low. If it drops below the threshold, the scanner automatically shuts off until the battery is recharged.

**TURN ON THE SCANNER**

Turn on the scanner after it has been completely charged (Ni-MH batteries) or alkaline batteries have been installed.

*Note: Make sure the antenna is connected before you turn on the scanner.*

1. You can select the band plan (USA or Canada) when you turn on the scanner (default = USA). Press and hold the key for 2-3 seconds to turn on the scanner and then press and hold 1 for USA or 2 for Canada. The band plan will remain until you change it again.

2. If this is the first time you have turned on the scanner, All LocOut displays. This means that no frequencies have been saved into channels. Press Srch to begin searching.
**Adjust Squelch**
The scanner recognizes signals as transmissions if they exceed a signal strength threshold. Adjusting the squelch sets this threshold level. Increasing squelch requires a signal to be stronger to be seen as a transmission. If you set the squelch too high, you will risk not receiving transmissions that are lower than that threshold. Reducing the squelch allows weaker signals to be accepted. However, if you lower the squelch too much, you will hear white noise all the time.

1. Press **Func** and the press down and release the scroll control knob. **SqL** and a number display.

2. Turn the knob until the interference is gone. Press the scroll control knob again to set the level and return to the previous function.

**Adjusting for Interference**
There are several options to adjust your scanner to minimize interference. Try:

- Moving the scanner or its antenna away from the source.
- Using an optional external antenna designed for multi-band coverage. (You can purchase this type of antenna at a local electronics store). If the optional antenna has no cable, use 50-70 ohm coaxial cable for lead-in. An adapter might be necessary for the optional antennas.
- Moving the scanner from high-moisture environments such as the kitchen or bathroom.
- Moving the scanner from direct sunlight or near heating elements or vents.
SR30C CONTROLS AND DISPLAY

HARDWARE DESCRIPTION

Keypad

Your scanner’s keys have various functions labeled on the key tops.

To select the function labeled on a key, simply press the key. To select the function labeled in smaller text on a key, first press **Func** then release it. **F** appears on the display. Press the next key in the function key sequence while **F** displays. **F** appears or disappears as you press **Func**.
If your scanner’s keys seem confusing at first, the following information should help you understand each key’s function.

OPERATION

SEARCHING

The SR30C has 10 preset search ranges that display as 1 - 10 across the top of the screen when you press Srch. It also has 10 preset service bands that display in two rows across the bottom of the screen when you press Func + Svc.

*Note: Service Search is discussed on page 37.*

When you press Srch, the SR30C begins searching the search ranges until it finds activity. The search range number flashes and it remains on that frequency until activity ends. Press Srch at any time to continue.

Press a search range’s corresponding number to turn it off and back on. For example, press 4 to turn search range #4 off. The number 4 will no longer display across the top of the screen.

You can search these ranges through:

- Quick Search - Designate a starting point to search from.
- Custom Search - Designate and store upper and lower frequency limits for each of 10 search ranges. The scanner searches within this range.

**Quick Search**

Quick Search lets you designate a starting point for searching. Once you are searching from this point, you can stop the search and store frequencies in a channel.

1. If the scanner is scanning or searching, press Hold.
2. Enter the frequency using the number and . Clr keys. The scanner automatically rounds the entered number
to the nearest valid frequency. For example, if you enter 151.473 (MHz), your scanner accepts it as 151.475. However, if you enter a frequency that is out of range, the scanner sounds an error tone and Error appears. Enter another frequency.

3. Press **Srch**. The scanner searches, starting from the frequency you just entered. (Turn the scroll control knob to change the search direction.) The scanner also automatically turns on the Delay function; **DLY** displays. To turn off the function, press **Func + Dly** (see page 47).

**Custom Search**

You can adjust each preset search range’s upper and lower frequency limits.

1. Press **Func + Psrc**. The scanner enters *Custom Search* mode and displays **SRCH** and **PGM**. The upper and lower frequencies for Custom Search range 1 alternate.

2. Turn the scroll control knob to scroll through the rest of Custom Search ranges until you find the one you want. The search range numbers at the top of the screen change as you cycle through them.

3. Enter the lower limit frequency and press **E**. The frequency range flashes with the adjusted lower limit frequency.

4. Enter the upper limit frequency and press **E**. The adjusted frequency range flashes with the adjusted upper limit frequency (both upper and lower frequencies are now adjusted).
5. Press **Srch** to start searching your custom search range or turn the scroll control knob to a different search range and enter another frequency.

**Service Search**

You can search for Weather, Police, Fire/Emergency, Marine, Racing, Civil Air, HAM Radio, Railroad, CB radio, and Other (Other = FRS/GMRS/MURS) transmissions without knowing the specific frequencies used in your area. The scanner is preprogrammed with all the frequencies allocated to these services. To use this feature, press **Func** + **Svc**. **SRCH** appears and the scanner starts searching from the weather service bands.

To select a different service search, repeatedly press **Svc** as long as you are still in **Function** mode. If you are not in **Function** mode, press **Func** to return and then press **Svc**.

Services are scanned in the following order: Weather, Police, Fire/Emergency, Marine, Racing, Civil Air, HAM Radio, Railroad, CB radio, and Other (Other = FRS/GMRS/MURS). When the scanner stops on a transmission, press **Hold** to stop searching and listen to the transmission. **Hold** displays. In this mode, you can also turn the scroll control knob to step through the frequencies.

To release the hold and continue searching, press **Hold** again.

**Note:** Because there are many different frequencies allocated to fire and police departments, it can take several minutes to search all the service frequencies.
STORING FREQUENCIES

To store frequencies in the first available channel:

1. Press **Hold**.
2. Enter the frequency and press **Hold** and **Func + Pgm**.
3. The scanner alternates between the frequency you are stopped on and the first available channel number with no frequency stored. Press **E**.
4. The scanner is now on that frequency, on Hold with the Delay function automatically turned on (see page 47). Press **Srch** or **Scan** again to continue.

**Note**: Refer to [www.radioreference.com](http://www.radioreference.com) for a list of frequencies in your area.

You can also store frequencies directly into a specific channel in a specific channel bank.

1. From **Search** or **Scan** modes, press **Hold**.
2. Press **Func + Pgm**. The scanner displays the next available channel number and alternates between **O** and the frequency you’re holding on.
3. Press **Func** and turn the scroll control knob to change channel banks if desired; press **Func** again to select that channel bank.
4. Turn the scroll control knob to change channels within that bank.
5. Press **E** to store the frequency in the displayed channel/channel bank.
6. The scanner is now on that frequency, on Hold with the Delay function automatically turned on (see page 47).
If you entered a frequency that has already been entered elsewhere, the scanner sounds an error tone and displays the channel that was duplicated. If you entered the frequency by mistake, press .Clr twice to clear the frequency and enter a different one. To enter the frequency anyway, press E to accept.

**Erasing a Stored Frequency**
1. Find the frequency you want to erase. Press **Hold**.
2. Press **Func + Pgm**.
3. Press **0** and then press **E**.
4. The displayed frequency changes to all 0s.

**SCANNING**
When you store frequencies into channels, those channels are grouped into banks. Each bank contains 50 channels. You can store service channels and non-service channels in the same bank. For example, you can store a city’s fire, police, marine, etc, together with utilities and other businesses. There is no frequency range restriction per bank.

While you are scanning frequencies stored in the banks, the word **SCAN** scrolls across the display. When it finds a transmission, that frequency displays.

**Enabling/Disabling Channel Banks**
You can enable and disable each channel bank. When you disable a bank, the scanner does not scan any of the 50 channels in that bank.

In Scan modes, press the number key that corresponds to the bank you want to disable or enable. That bank number
displays at (or disappears from) the top of the screen, showing the currently enabled banks.

The scanner scans all the channels within the displayed banks that are not locked out. The bank number flashes when the scanner scans a channel that belongs to that bank. You can manually select any channel within a bank, even if that bank is disabled. You cannot, however, disable all banks. One bank must always be enabled.

**Scan the Stored Channels**

Press **Scan**. The scanner scans through all non-locked out channels in enabled banks. (See page 44 for more information on locking out channels.) When the scanner finds a transmission, it stops on it. When the transmission ends, the scanner resumes scanning.

**Notes:**

- If you have not stored frequencies into any channels, the scanner does not scan.
- If the scanner picks up unwanted partial or very weak transmissions, press **Func** and press the scroll control knob. **Sql** displays. Turn the knob clockwise to decrease the scanner’s sensitivity to these signals. To listen to a weak or distant station, turn the knob counterclockwise.
- Adjust squelch until the audio mutes.

**Manually Select a Channel**

You can continuously monitor a single channel without scanning. This is useful if you hear an emergency broadcast on a channel and do not want to miss any details - even though there might be periods of silence - or if you want to monitor a specific channel.
To manually select a channel when in Scan mode, press **Hold**, enter the channel number, and press **Hold** again. The scanner moves to the frequency stored in that channel.

During scanning, if the radio stops at a channel you want to listen to, press **Hold** once. (Rotate the scroll control knob to step through stored channels.) Press **Hold** again or **Scan** to resume automatic scanning.
CLOSE CALL® RF CAPTURE

Your scanner’s Close Call feature lets you set the scanner to detect then display the frequency of a nearby strong radio transmission such as mobile and handheld two-way radios in areas with no other strong transmission sources. However, if you are in an area with many transmission sources (such as pager radio transmitters, multi-use radio towers, traffic control devices, etc.), Close Call mode might not find the transmission you are searching for, or it might find a transmission other than the one you are searching for.

Close Call mode works well for finding frequencies at venues such as malls and sporting events. You can set the scanner so that Close Call detection works “in the background” while you are scanning other frequencies. You can turn off the Close Call feature and scan normally as well as turn off the scanning function and look for Close Call transmissions only.

Close Call Operation Mode

1. Press **Func** and hold until the following screen displays:
2. For the Close Call mode, frequencies are divided into 4 Close Call bands. Turn these bands on and off by pressing 1 - 4 as indicated:

| Band      | Range (MHz)   | To turn a Close Call band on/off, press...
|-----------|--------------|----------------------------------------
|           | Low          | High                                  |
| VHF Low   | 25.00000     | 54.00000                              | 1                        |
| AIR       | 108.00000    | 136.99166                             | 2                        |
| VHF High  | 137.00000    | 174.00000                             | 3                        |
| UHF       | 406.00000    | 512.00000                             | 4                        |

You can set the scanner so it alerts you when the Close Call feature detects a frequency. Program alert tones through your PC (see page 49).

**Notes:**

- Close Call RF capture cannot detect frequencies outside the scanner’s normal operating range.
- Close Call mode works better with some types of transmissions than others. It might not correctly display frequency information for transmitters using a highly directive antenna (such as an amateur radio beam antenna), if there are many transmitters operating at the same time in the same area, or if the transmitter is a broadcast television station.

**Using Close Call Mode**

Close Call mode has three operation modes:
• Close Call DND. Close Call Do Not Disturb only checks for close calls if it is not stopped on a transmission. The □ icon displays.
• Close Call Priority. The scanner checks for close calls regardless of whether it is stopped on a transmission. The ◎ icon displays.
• Close Call Off. The scanner does not check for close calls. No icon displays.
Pressing Fnc + ◎ cycles through the Close Call functions in this order: Close Call Off/Close Call DND/ Close Call Priority.

To turn on Close Call mode, press Func + ◎ once except in WX Search, Band Select, or Program mode.

Notes:

• Set the squelch tight (where only strong signals are received) while using the Close Call feature.
• To continue scanning normally while the Close Call feature is working, simply press Scan.

When the scanner finds a frequency, Found displays; it does not display the frequency. Press any key to confirm the displayed frequency. Press Scan to resume scanning. Every 2 seconds, the scanner checks for frequencies in the Close Call band you specified (see page 43).

LOCKING OUT CHANNELS AND FREQUENCIES

You can skip any channel or up to 200 specified frequencies during Search mode (100 permanent and 100 temporary). This lets you avoid unwanted frequencies (Search/Close Call modes), channels that have a continuous transmission (such as a weather channel), or have static and interference.
Temporary Lock Out
To temporarily lock out a channel in Scan mode or a frequency in Search and Close Call modes, manually select the channel or frequency (see page 40) and then press L/O. TL/O appears. You have TEMPORARILY locked out the channel/frequency.

Permanent Lock Out
To permanently lock out a frequency or channel, press L/O twice while on that frequency. L/O displays.

Note: You can still manually select locked-out channels.

Unlock
Unlock Temporary Lock Out
1. Locate the temporarily locked out channel; press Hold.
2. Press L/O until the locked out status no longer displays.
3. Press Hold again to return to Scan or Search modes.
You can also turn the scanner off and back on. It will unlock all channels that have been temporarily locked out

Unlock Permanent Lock Out
To unlock a permanently locked-out frequency/channel:
1. Manually enter the frequency/channel then press Hold. The frequency and lockout status display.
2. Press L/O until the locked out status no longer displays.
3. Press Hold again to return to Scan or Search modes.

To unlock all registered channels in enabled banks, press Hold to stop scanning, then press and hold L/O until the
scanner beeps twice and **CLEAR** displays. Press E to unlock all.

**Notes:**

- You cannot lock out frequencies during WX service search.
- Locked out frequencies are shared between Service Search, Custom Search, Quick Search, and Close Call modes. If locked out frequencies are set in a specific mode, those frequencies are also skipped in other Search (except WX Service Search) and Close Call modes.
- If you selected all frequencies in a search band to be skipped, the scanner beeps 3 times and does not search.
- You can skip 100 frequencies for Temporary Lockout and 100 frequencies for Permanent Lockout (200 locked out frequencies total). After locking out 200 frequencies, the next time you try to select a frequency to skip the scanner displays **Full** and will not lock out that frequency.
- If you want to find your locked-out frequencies, press **Hold** and then turn the scroll control knob to cycle through the frequencies. **L/O** or **T/LO** displays on the locked out frequencies.

**PRIORITY**

The Priority feature lets you scan through the channels and still not miss important or interesting calls on specific channels. There are three Priority options available in **Scan** or **Scan Hold** mode:

- Priority Off (no display) : The scanner does not check for priority channels.
• Priority DND (PRI displays): In Priority Do Not Disturb (DND), the scanner checks Priority channels every 2 seconds only when it is not receiving transmissions.

• Priority Scan (PRI displays): The scanner checks Priority channels every 2 seconds regardless of whether or not it is receiving a transmission.

You can designate one channel in each bank as a priority channel (10 total). The first channel in each bank is the default Priority channel.

Follow these steps to select a different channel in a bank as the priority channel.

1. Manually select the channel you want for the Priority channel.

2. Press Func + Pgm, then press Func + Pri. P appears to the left of the selected channel number.

3. Repeat Steps 1 and 2 for other channels for each bank you want to program as a priority channel.

From Scan Hold mode, press Func + Pri to cycle through the Priority options.

DELAY

Sometimes a user might pause before replying to a transmission. To avoid missing a reply on a specific channel, you can program a 2-second delay into channels or searches. The scanner continues to monitor the channel frequency for an additional 2 seconds after the transmission stops before resuming scanning or searching.
<table>
<thead>
<tr>
<th>Mode</th>
<th>Delay Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scan</td>
<td>Each channel can be set individually.</td>
</tr>
<tr>
<td>Search</td>
<td>Custom Search: If one range is set, all ranges are set. Service Search: Each band can be set as a unit.</td>
</tr>
<tr>
<td>Quick Search and Close Call</td>
<td>Changes made to Delay assignment in one mode are reflected in the other mode.</td>
</tr>
</tbody>
</table>

When the delay feature is on, **DLY** displays. If it is off, follow one of these procedures to program a delay depending on how the scanner is operating.

- If the scanner is scanning and stops on an active channel where you want to program a delay, quickly press **Func + Dly** before it continues scanning again. **DLY** appears.
- If the desired channel is not selected, manually select the channel, then press **Func + Dly**. **DLY** appears.
- If the scanner is searching, press **Func + Dly**. **DLY** appears and the scanner automatically adds a 2-second delay to every frequency it stops on in that band.

To turn off the 2-second delay, press **Func + Dly** while the scanner is monitoring a channel, scanning, or searching. **DLY** disappears.

**KEYLOCK**

Use the scanner’s keylock to protect it from accidental program changes. When the scanner’s keys are locked, the only controls that operate are scroll control knob (volume only), **Func, Hold**, and 🐨.
To turn on keylock, press `Func + ☐`. ☐ appears. To turn off keylock, press `Func + ☐` again. ☐ no longer displays.

**Note:** Using keylock does not prevent the scanner from scanning channels.

**BACKLIGHT**

Pressing `Func` and ☒ activates the display backlight at a low level. Press ☒ again to change to a higher level. It remains on for 15 seconds and then turn off automatically. The next press turns the backlight off.

**PC PROGRAMMING**

Connect your scanner to your PC through the USB cable to:

- Program channels into the scanner
- Set any setting

When you connect your scanner to your PC, a series of screens will appear to assist you.

USB drivers and programming software are available for download from http://info.uniden.com/UnidenMan4/SR30C.
# TROUBLESHOOTING

If your SR30C is not performing properly, try the following steps.

CARE AND MAINTENANCE

RESETTING THE SCANNER

If the scanner’s display locks up or stops operating properly, you might need to reset the scanner.

**CAUTION: This procedure clears all the information you have stored in the scanner. Before you reset the scanner, try turning it off and back on to see if it begins working properly. Reset the scanner only when you are sure it is not working properly.**

1. Turn off the scanner.
2. While holding down 2, 9, and **Hold**, turn on the scanner. It takes about 3 seconds to initialize and **CLEAR** appears.

GENERAL USE

- Turn the scanner off before disconnecting the power.
- Always write down the programmed frequencies in the event of memory loss.
- If memory is lost, simply reprogram each channel. The display shows 000.0000 in all channels when there has been a memory loss.
- Always press each button firmly until you hear the entry tone for that key entry.

LOCATION

- Do not use the scanner in high-moisture environments such as the kitchen or bathroom.
- Avoid placing the unit in direct sunlight or near heating elements or vents.
If the scanner receives strong interference or electrical noise, move it away from the source of the noise. If possible, a higher elevation might provide better reception.

CLEANING

Keep the scanner dry. If it gets wet, wipe it dry immediately. Use and store the scanner only in normal temperature environments. Handle the scanner carefully: do not drop it. Keep the scanner away from dust and dirt, and wipe it with a damp cloth occasionally.

- Disconnect the power to the unit before cleaning.
- Clean the outside of the scanner with a mild detergent.
- To prevent scratches, do not use abrasive cleaners or solvents. Be careful not to rub the LCD window.
- Do not use excessive amounts of water.

REPAIRS

Do not attempt any repair. The scanner contains no user serviceable parts. Contact the Uniden Customer Service Center or take it to a qualified repair technician.

BIRDIES

All radios can receive “birdies” (undesired signals). If your scanner stops during Scan mode and no sound is heard, it might be receiving a birdie. Birdies are internally generated signals inherent in the electronics of the receiver.

Press L/O to lock out the channel, then press Scan to resume scanning.
If you still cannot get satisfactory results while using your scanner or if you want additional information, please visit our website at http://www.uniden.com.
SPECIFICATIONS

Certified in accordance with FCC Rules and Regulations Part 15, Subpart C, as of date of manufacture.

Channels: .................................................................................................................. 500

ONE-YEAR LIMITED WARRANTY

Important: Evidence of original purchase is required for warranty service.

WARRANTOR: UNIDEN AMERICA CORPORATION ("UNIDEN")

ELEMENTS OF WARRANTY: Uniden warrants, for one year, to the original retail owner, this Uniden Product to be free from defects in materials and craftsmanship with only the limitations or exclusions set out below.

WARRANTY DURATION: This warranty to the original user shall terminate and be of no further effect 12 months after the date of original retail sale. The warranty is invalid if the Product is (A) damaged or not maintained as reasonable or necessary, (B) modified, altered, or used as part of any conversion kits, subassemblies, or any configurations not sold by Uniden, (C) improperly installed, (D) serviced or repaired by someone other than an authorized Uniden service center for a defect or malfunction covered by this warranty, (E) used in any conjunction with equipment or parts or as part of any system not manufactured by Uniden, or (F) installed or programmed by anyone other than as detailed by the Operating Guide for this product.

STATEMENT OF REMEDY: In the event that the product does not conform to this warranty at any time while this warranty is in effect, warrantor will repair the defect and return it to you without charge for parts, service, or any other cost (except shipping and handling) incurred by warrantor or its representatives in connection with the performance of this warranty. THE LIMITED WARRANTY SET FORTH ABOVE IS THE SOLE AND ENTIRE WARRANTY PERTAINING TO THE PRODUCT AND IS IN LIEU OF AND EXCLUDES ALL OTHER WARRANTIES OF ANY NATURE WHATSOEVER, WHETHER EXPRESS, IMPLIED OR ARISING BY OPERATION OF LAW, INCLUDING, BUT NOT LIMITED TO ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. THIS WARRANTY DOES NOT COVER OR PROVIDE FOR THE REIMBURSEMENT OR PAYMENT OF INCIDENTAL OR CONSEQUENTIAL DAMAGES. Some states do not allow this exclusion or limitation of incidental or consequential damages so the above limitation or exclusion might not apply to you.
LEGAL REMEDIES: This warranty gives you specific legal rights, and you might also have other rights which vary from state to state. This warranty is void outside the United States of America.

PROCEDURE FOR OBTAINING PERFORMANCE OF WARRANTY:
If, after following the instructions in this Operating Guide you are certain that the Product is defective, pack the Product carefully (preferably in its original packaging). Include evidence of original purchase and a note describing the defect that has caused you to return it. The Product should be shipped freight prepaid, by traceable means, or delivered, to warrantor at:
