There are 7 NOAA channel frequencies available.

The selected weather channel for alerts when not transmitting or receiving.

The LCD remains lit for 10 seconds before turning off.

Press MENU/EXIT to turn off. If no setting changes are made, the radio will default back to the current setting. The radio is still able to receive and not transmit and do not receive an incoming call while Always On is on.

Your radio has a unique circuit designed to detect and respond only to specific calls from NOAA weather radio stations. The radio is capable of remembering a list of call signs or any signals from other sources, but it is a unique feature that you set up, the LED functions as a battery indicator. Your radio has a long battery life, but it will fade over time. You can use this radio in an emergency. If you have set the unit to the correct frequency, it will emit a signal that will alert the emergency services.

To clean the radio, use a soft cloth dampened with alcohol. Do not submerge the unit in water. If the unit is completely dry, put the unit back in service. To determine if the unit is completely dry, check that the humidity indicator disappears. Do not operate the radio near unshielded electrical blasting caps. Do not operate the radio in hazardous locations. The radio should be held 1 inch from the user's face in normal operating conditions. The radio should be operated only in the manner for which it is designed.

The radio retains the keylock status even when the unit is turned off. When Weather Alert is activated, the highest priority warning signal will be transmitted. The unit finds a warning signal, it switches to the selected channel and begins warning you. If you receive a warning signal, you are instructed to tune in to the selected channel for further information.

Press and hold WX/ALERT once more, it will return to the normal display. And then, press PTT to enter the Weather Radio Broadcast mode. To turn on the Weather Radio Broadcast mode, press and hold WX/ALERT once more, then press PTT.
